1 PROJECT OVERVIEW

The purpose of this Technical Information Report (TIR) is to document the basis of design for proposed stormwater improvements as part of the Sammamish Louis Thompson Road tightline project (Project). The TIR worksheet from the 2021 King County Surface Water Design Manual (KCSWDM) is included on **Figure 1** and summarizes the Project's design constraints and design to meet the core requirements of the KCSWDM. All figures are located in the Figures section at the end of this report, with the exception of **Figure 2**, which is located in Section 1.1.

1.1 PROJECT SUMMARY

The proposed Project design will upgrade the existing ditch and culvert system on Louis Thompson Road to a tightline system that includes a storm sewer pipe and structures for the collection and conveyance of the runoff. The proposed work extends 0.67 mile from 210th Place SE to East Lake Sammamish Parkway NE as shown on **Figure 2.** This Project will address high velocities and erosion within the existing ditch systems, reduce flooding risk, and mitigate stormwater impacts from in-fill development. This Project is part of the City of Sammamish's commitment to protecting Zackuse Creek and Lake Sammamish and is listed as a high-priority capital improvement project in the Final Zackuse Creek Basin Plan (AltaTerra 2019). The Project extents and basin areas are shown on **Figure 3** and a summary of existing soil conditions is included on **Figure 4**.

Figure 2. Site Location Map

Louis Thompson Road is a collector arterial roadway that runs north–south through Sammamish and connects 212th Avenue SE with East Lake Sammamish Parkway NE. Existing conditions include a two-lane cross section with ditches and culverts on the north side and an unimproved slope leading to Zackuse Creek on the south side. The private developments around Louis Thompson Road were primarily constructed in the 1970s and 1980s, and little has been done in those neighborhoods to improve runoff. Historically, this has caused the corridor to be impacted by uncontrolled stormwater runoff. This Project intends to mitigate flooding, erosion, and landslide hazards.

The proposed design involves the installation of a stormwater tightline and non-motorized improvements in the form of a new sidewalk and bike lane on the north side of the roadway. There are also spot locations of shoulder widening on the south side of the Project to provide a consistent shoulder width for use as a bike lane. To accommodate the sidewalk widening and spot location widening on the south side, several short rockery walls are proposed along the corridor.

Sammamish Plateau Water will install a new 8-inch ductile iron watermain as a separate project ahead of this project's construction along the south side of Louis Thompson Road NE. This Project will include a final pavement overlay of both travel lanes. Segments of the existing asbestos cement watermain that conflict with the proposed stormwater improvements will be removed.

2 CONDITIONS AND REQUIREMENTS

The applicability of the Core Requirements and Special Requirements are evaluated in this section. The Project improvements result in more than 2,000 square feet of new plus replaced impervious surface; therefore, all nine core requirements (CRs) per Section 1.2 of the KCSWDM must be evaluated, along with all five special requirements in Section 1.3.

2.1 CORE REQUIREMENTS

The following sections describe the minimum CRs applicable to the Project.

2.1.1 Discharge at the Natural Location (CR #1)

The intent of the discharge at the natural location requirement is to prevent adverse impacts to downstream properties caused by diversion of flow path drainage. To prevent adverse impacts, this Project mitigates for the changes in surface runoff in developed conditions at the main discharge points through the addition of flow-control facilities. These facilities were added to mitigate for new impervious surface areas generating a higher surface runoff prior to existing culverts with areas of steep downslope flow paths. The main discharge points on the Project are primarily existing cross-culverts discharging south to steep-slope areas along with a discharge to an existing storm drainage mainline system to the west, which contribute flows to Zackuse Creek. The existing discharge points are shown on **Figure 5** and are maintained in the developed condition, with the exception of a slightly shifted discharge pipe into the existing detention facility as shown on **Figure 6**. The discharge point to the existing detention facility noted on **Figure 6** shows where stormwater leaves the roadway public right-of-way; however, stormwater is discharged to an existing pond on a city-owned parcel.

2.1.2 Offsite Analysis (CR #2)

The intent of the offsite analysis requirement is to necessitate identification and evaluation of offsite flooding, erosion, and water quality problems so that appropriate mitigation can be provided. The existing outfalls and flow paths downstream of the Project area are noted in Section 3. A Level 1 analysis of the downstream flow paths is detailed in this section. The Offsite Analysis Drainage System Table from the KCSWDM has been included in **Appendix A** along with key photos from a site visit of the Project conducted on February 15, 2023. As the downstream area of the Project is mostly within an erosion hazard area, Osborn Consulting (Osborn) conducted a Level 2 analysis at culvert discharge points to measure the difference in flow rates from existing to developed conditions to ensure the Project does not cause any erosion issues downstream. Flow rates from the post-developed conveyance system are included in the model results within **Appendix B**. The areas contributing to existing culverts are shown on **Figure 7** and post-developed areas to culverts and flow control facilities are shown on **Figure 8**.

2.1.3 Flow Control (CR #3)

The purpose of this CR is to ensure projects provide onsite flow control facilities to mitigate the impacts of stormwater runoff from new impervious surface, new pervious surface, and replaced impervious target surfaces for flow control mitigation per the KCSWDM.

The Project lies within a Conservation Flow Control Level 2 area which requires flow control to historic site conditions matching historic durations for 50 percent of the 2-year through 50-year peaks and matching historic 2- and 10-year peak flows. Flow control facilities in the Conservation Flow Control Area must mitigate runoff from target surfaces within each threshold discharge area (TDA) to which the CR applies.

For this Project, the target surfaces for flow control are the new impervious surfaces. The Project does not generate new pervious surfaces. The proposed non-motorized improvements along this corridor qualify

this as a transportation redevelopment project. As a transportation redevelopment project, the replaced impervious surfaces are not considered target surfaces because the new impervious area totals less than 50 percent of the existing impervious surface within project limits, per KCSWDM Section 1.2.3.1.

The flow control facility requirement in Conservation Flow Control Areas is waived for any TDA in which there is no more than a 0.15 cubic foot per second (cfs) difference in the sum of historic condition 100-year flows to developed 100-year flows (when modeled using 15-minute time steps). TDAs 1 and 4 are exempt from flow control as they meet the 0.15-cfs difference exception criteria of the KCSWDM. A summary of TDAs triggering flow control is listed in **Table 1**. **Figure 6** shows the new and replaced impervious and PGIS areas by TDA.

Table 1. Summary of Flow Control Applicability

TDA	CR #3 Applies?	Flow Control Provided?
TDA 1	No(1)	Yes(2)
TDA 2	Yes	Yes
TDA 3	Yes	Yes
TDA 4	No(3)	No

Notes:
(1) The TDA is exempt from CR #3 as there is less than a 0.15 cubic foot per second increase in flows from historic to developed conditions when modeled with 15-minute timesteps. See **Appendix C** for TDA 1_POC model results.
(2) Flow control is provided to mitigate concerns of added flows from new impervious area at the existing outfalls in an erosion hazard area with steep slopes.
(3) There is no new impervious area added to this TDA, no changes in flow. Therefore, flow control is not required.
CR – core requirement
TDA – threshold discharge area

2.1.4 Conveyance System (CR #4)

This CR requires all engineered conveyance system elements to be analyzed, designed, and constructed per applicable codes, manuals, and addendums. Pipe systems are designed to convey the 25-year flow assuming developed conditions for onsite tributary areas and existing conditions for offsite tributary areas. The 100-year hydraulic grade line has been analyzed and all structures are confirmed to not overtop at the 100-year event due to downstream steep-slope, critical area concerns. Energy dissipation is required at outfalls from all drainage systems.

Section 5 discusses in further detail how the conveyance system analysis and design for this Project meets this CR.

2.1.5 Construction Stormwater Pollution Prevention (CR #5)

The Project is required to provide erosion and sediment controls (ESCs) to prevent the transport of sediment from the Project site. ESC measures are shown on the Erosion Control and Site Preparation Plans. A Construction Stormwater Pollution Prevention (CSWPP) Plan is included in **Appendix D**.

2.1.6 Maintenance and Operations (CR #6)

Operation and maintenance procedures are required for best management practice (BMP) facilities. The City of Sammamish will maintain and operate the drainage facilities installed as part of this Project. Operation and maintenance procedures for detention tank facilities follow the standard maintenance

recommendations in the KCSWDM, as noted in the Operation and Maintenance Manual included in **Appendix E**. Operation and maintenance procedures for the Contech StormFilter water quality units are discussed further in Section 10.

2.1.7 Financial Guarantees and Liability (CR #7)

This Project is not subject to the financial guarantees and liability requirements of the KCSWDM because the City of Sammamish will own and maintain the drainage facilities.

2.1.8 Water Quality (CR #8)

Water quality treatment facilities are required to treat the stormwater runoff from new and replaced pollution-generating impervious surfaces (PGIS) and new pollution-generating pervious surface (PGPS). Replaced PGIS areas are required to be treated on transportation redevelopment projects where new PGIS are 5,000 square feet or more. The four TDAs within the Project limits fall under the "Surface Exemption from Transportation Redevelopment Projects" from CR #8 as the total new impervious surface within the Project limits is less than 50 percent of the existing impervious surface. There is less than 5,000 square feet of new PGIS that is not fully dispersed within each TDA and less than 0.75 acre of new PGPS that is not fully dispersed.

The City of Sammamish Water Quality Map shows this Project is within a Sensitive Lake Water Quality Treatment Area. The treatment goal for water quality facilities within a sensitive lake area is 50 percent of the annual average total phosphorus removal. The Sensitive Lake Protection Menu per KCSWDM must also be used for water quality facility selection where CR #8 is required. Louis Thompson Road has average daily traffic (ADT) counts above 2,000 which would require Enhanced Basic treatment if CR #8 applies to any of the Project TDAs.

As this Project will add a raised sidewalk, which is considered non-pollution generating and all TDAs are under the 5,000 square feet new PGIS threshold, CR #8 does not apply. Although CR #8 is not applicable, water quality facilities are proposed upstream of all detention facilities to improve the water quality of the Zackuse Basin following the goals of the Final Zackuse Creek Basin Plan (AltaTerra 2019).

2.1.9 Flow Control BMPs (CR #9)

Flow control BMPs are methods and designs for dispersing, infiltrating, or otherwise reducing or preventing development-related increases in runoff at or near the sources of those increases. CR #9 is applicable to this Project as there is more than 2,000 square feet of new plus replaced impervious surfaces.

As this Project is considered a road improvement project within an urban growth area, it must meet the requirements of KCSWDM Section 1.2.9.3.2. The first requirement of this section is to consider the applicability of full dispersion for target impervious surfaces. Due to adjacent steep slopes and limited viable areas for full dispersion, the dispersion of the new impervious areas from the sidewalk and curb installation are infeasible.

Full infiltration, limited infiltration, bioretention, and dispersion are also considered infeasible due to the corridor's steep roadway longitudinal slope, and adjacent downstream steep slope embankments to the south. The Project area is also located in a critical aquifer recharge area classified as susceptible to groundwater contamination, limiting infiltration of stormwater. There is also limited space within the roadway right-of-way to provide flow control BMPs.

The soil moisture holding capacity of replaced pervious areas shall meet soil amendment requirements of KCSWDM Section 1.2.9.3.2 and is the only applicable CR#9 BMP proposed as part of this Project.

2.2 SPECIAL REQUIREMENTS

All five special requirements of the KCSWDM have been evaluated for this Project and only Special Requirement #1 is applicable. Special Requirement #1 lists other adopted regulations for controlling drainage on an area-specific basis. The Final Zackuse Creek Basin Plan applies to this Project, which is referred to as Zack-CIP-3 in the plan. As noted in the Final Zackuse Creek Basin Plan, this Project will address 25- and 100-year flooding on Louis Thompson Road as well as reduce high velocity and erosion for outfalls towards Zackuse Creek. Water quality treatment is noted as being part of the Project design.

Special Requirement #2 pertains to flood hazard areas and Special Requirement #3 pertains to flood protection facilities, such as levees or revetments. There are no flood hazard areas or flood protection facilities planned for this Project. Special Requirement #4, source controls, also does not apply to this Project, because it does not require a commercial building or site development permit.

Special Requirement #5, oil control, is required for high-use sites including roadway intersections with a measured ADT count of 25,000 vehicles or more on the main roadway and 15,000 vehicles on the intersecting roadway. For this Project, the main roadway with higher ADT counts is East Lake Sammamish Parkway NE and the intersecting roadway, Louis Thompson Road. According to data from the City of Sammamish, both roadways have ADT counts below 15,000. Special Requirement #5 does not apply to this Project.

3 OFFSITE ANALYSIS

Offsite analysis includes a downstream analysis, evaluation of impacts to fish habitat, groundwater levels, groundwater quality, wetlands, or other environmental features which may be impacted by the proposed Project. Potential or existing problems per Section 2.3 of the KCSWDM are noted in the Drainage System Table, included in **Appendix A**, and described in Section 3.1. A Level 1 analysis is included in this section, which consists of a qualitative survey of the downstream system from the Project. A Level 2, quantitative analysis, was performed to analyze the change in flows to key outfall locations as there are steep slopes and creek incision identified downstream. This analysis has been conducted to quantify impacts to sensitive downstream elements.

3.1 LEVEL 1 DOWNSTREAM ANALYSIS

Potential or existing problems within the Project study area, extending up to 1 mile downstream and to the extent of the upstream contributing basins, are noted in the Drainage System Table located in **Appendix A**.

3.1.1 Resource Review

The resources in **Table 2** have been consulted to analyze the downstream conditions of the Project.

Table 2. Downstream Analysis Resource Review

Resource	Finding
Final Zackuse Basin Plan, AltaTerra, April 2019	Site walk of the mainstem of Zackuse Creek found evidence of downcutting (channel erosion) and incision in several locations downstream of the Project area.
King County iMap	Environmentally sensitive area GIS layers indicate the downstream flow paths from the Project are in a mapped erosion hazard and landslide hazard area from NE 2nd Street, east.

Louis Thompson Road from East Lake Sammamish Parkway NE to 210th Place SE Tightline Project: Existing Conditions, David Evans and Associates, June 2022	Descriptions of wetlands W4 and W5, downstream of the Project; streams, Project located in critical aquifer recharge area.

3.1.2 Site Inspection Findings

Osborn and City of Sammamish staff conducted a site visit on February 15, 2023, which included walking the Project corridor and inspecting downstream flow paths. In steep slope areas, downstream flow paths were observed from the edge of the shoulder along Louis Thompson Road. In general, the downstream flow paths were observed to be heavily forested, with heavy vegetation including ferns and blackberry outside of developed areas.

Where traversable, Osborn staff inspected culvert outfalls and downstream flow paths for signs of erosion or downcutting. Of all the outfall locations and discharge points observed, there were only two main locations exhibiting existing downcutting in the channels downslope of the culvert flow paths and one location with severe erosion around the culvert pipe outlet. Culvert 2, as noted on **Figure 6**, has a

corrugated metal half pipe directing the flow path downslope of the culvert pipe. At the end of the metal half pipe, the flow path becomes recessed with evidence of downcutting and minor erosion downstream (photographs 9 and 10 in **Appendix A**). While the downstream end of Culvert 4 did not have any signs of erosion, the second 18-inch corrugated metal pipe (CMP) culvert under a driveway entrance had severe erosion around the downstream end (photograph 5 in **Appendix A**). The issue of erosion at this culvert will be evaluated separately by City of Sammamish maintenance staff and not addressed as part of this Project, other than the flow control mitigation measures which are proposed at Culvert 4, which is an upstream crossing of Louis Thompson Road. Key photos from the site visit are included in **Appendix A**.

Of note from the site visit, there was one downstream flow path which was seen to be obstructed. There is an existing 12-inch CMP which drains a portion of Louis Thompson Road into an existing pond facility maintained by the City of Sammamish. Although it had recently rained prior to the site visit, the pond bottom was dry. The Project had originally planned on tying into this existing outfall; however, from the observations during the site visit, this pipe was moderately misshapen at the downstream end, likely under the weight of the rockery wall and large tree on top (photograph 4 in **Appendix A**). To ensure the proposed stormwater system has a long-term viable flow path towards the existing detention facility, this pipe will be abandoned and a new pipe connection under the east edge of the maintenance access road is proposed.

3.2 LEVEL 2 QUANTITATIVE ANALYSIS

A Level 2 quantitative analysis was conducted to model the difference in flows to each outfall within Project limits. These areas were modeled using MGSFlood and 100-year flow rates and difference in flows are summarized in **Table 3**. MGSFlood results are included in **Appendix C**.

Table 3. Summary of Outfall Changes in Flows

Outfall	Change in 100-year Flow Rate (cfs) Developed-Existing	Model Reference
Culvert 1	+0.017	Culvert 1_Flow Analysis
Culvert 2	-0.459	Culvert 02_Flow Control_Iteration3
Culvert 3	-0.159	Culvert 03_Flow Control_Iteration3
Culvert 4	-0.018	Culvert 04_Flow Control_Iteration3
Existing Pond	+0.018	To Pond_Flow Control_Iteration3

Notes:
cfs – cubic feet per second

4 FLOW CONTROL, LOW IMPACT DEVELOPMENT, AND WATER QUALITY FACILITY ANALAYSIS AND DESIGN

The existing and developed site hydrology along with the flow control and water quality facility analysis and design is summarized in this section.

4.1 EXISTING SITE HYDROLOGY

The existing site hydrology is divided into onsite areas within Project right-of-way and offsite areas, which contribute runoff to Louis Thompson Road. The onsite area is a mix of impervious roadway surface and grassed pervious surface. Within the roadway right-of-way, stormwater runoff is collected in a series of ditches on the north side of the roadway, which convey flow westward down to Lake Sammamish. At 205th Avenue NE, the stormwater flows are conveyed to the west of Lake Sammamish Parkway NE in a pipe system draining into Zackuse Creek.

There is an existing pond facility north of Louis Thompson Road and east of 205th Avenue NE, which collects both roadway and offsite neighborhood runoff. There is a pipe connecting the north ditch to the pond which drains back into the Louis Thompson Road ditch and pipe system to the west.

The offsite basin areas consist primarily of residential single-family homes and neighborhood streets which have been split into impervious areas and pervious grassed surfaces. The offsite areas are designated as “OA” Offsite Area if the contributing area is outside project limits, # (TDA number the offsite area drains to), ### (catch basin number the offsite area drains to), alphabetical letter of the drainage area, and I (impervious area) or P (pervious area). Areas designated as pervious are assigned a weighted curve number per an approximation of offsite area impervious vs. pervious surface split per hydrologic soil group type. Both the offsite (OA) areas, project (PA) areas, and hydrologic soil type pervious areas are shown on **Figure 9**. Although there are trees within the offsite areas, the pervious condition has all been modeled as grassed surfaces considering potential developed conditions, which may generate a greater stormwater surface runoff volume and peak flows than forested surfaces. The residential roadway areas collect flows via roadside ditches which then drain southward towards Louis Thompson Road. There are also several offsite piped connections from yard drains and other private connections which tie into the existing Louis Thompson Road ditch system.

The Final Geotechnical Report (AESI) notes the project soils are primarily outwash with a section of fine sediment till soils at the east end of the project corridor. The NRCS hydrologic soil classifications are noted on **Figure 3**. Due to the presence of groundwater seepage, however, the on-site soils are modeled as Type C soils per Section 13.1 of the Final Geotechnical Report. The pre-developed and post-developed soils in MGSFlood within the Project limits are modeled as Till in lieu of Outwash soils due to the groundwater seepage and high groundwater consideration, which generates more stormwater surface runoff and less infiltration.

4.2 DEVELOPED SITE HYDROLOGY

In the developed condition, the Project will add new non-pollution generating impervious area with the addition of a sidewalk along the north side of the roadway. Driveway grading adjustments and shoulder widening in selected areas on the south side of Louis Thompson Road also add a small amount of new pollution-generating impervious area.

With the addition of sidewalk and curb and gutter on the north side of the road, a new tightline conveyance system has been proposed, which is primarily 18-inches in diameter and connects to the existing stormwater pipe system near 205th Avenue NE.

There are four flow control facilities proposed on this Project which are underground detention tanks. Three facilities are proposed upstream of existing roadway cross culverts (Culverts 2, 3, and 4) which

discharge into erosion and steep slope hazard areas. Each flow control facility is proposed to have a Contech StormFilter water quality treatment facility upstream.

The fourth flow control facility is sited upstream of the existing pond east of 205th Ave NE to detain new impervious area in TDA 3. Built in 1978, this pond is owned and maintained by the City of Sammamish and was not designed to the level of flow control currently required by the KCSWDM. As this pond provides flow control for the roadway in existing conditions, the roadway flows continue to be routed through the pond to ensure downstream flows are not increased more than 0.15 cfs in TDA 3. The inlet into the pond is proposed to be replaced as part of this Project due to the crushed, dilapidated condition of the existing CMP inlet. The existing pond itself will not be altered as part of this Project.

4.3 PERFORMANCE STANDARDS

For this Project, the target surfaces for flow control are the new impervious surfaces. The Project does not generate new pervious surfaces. The proposed non-motorized improvements along this corridor qualify this as a transportation redevelopment project. As a transportation redevelopment project, the replaced impervious surfaces are not considered target surfaces as the new plus replaced area totals less than 50 percent of the existing impervious surface within Project limits, per KCSWDM Section 1.2.3.1.

The Project lies within a Conservation Flow Control Level 2 area which requires flow control to historic site conditions matching historical durations for 50 percent of the 2-year through 50-year peaks and matches historical 2- and 10-year peak flows. Flow control facilities in the Conservation Flow Control Area mitigate runoff from target surfaces within each TDA the CR applies.

The flow control facility requirement in Conservation Flow Control Areas is waived for any TDA in which there is no more than a 0.15-cfs difference in the sum of historic condition 100-year flows to developed 100-year flows (when modeled using 15-minute time steps). TDAs 1 and 4 are exempt from flow control as they meet the 0.15-cfs difference exception criteria of the KCSWDM. TDAs 2 and 3 require flow control and detention tank facilities, which are provided in the proposed design to meet the flow control requirement. This design is further documented in Section 4.4.

Water quality treatment facilities are required to treat the stormwater runoff from new and replaced PGIS and new PGPS. Replaced PGIS are required to be treated on transportation redevelopment projects where new PGIS is 5,000 square feet or more. The four TDAs within the Project limits fall under the “Surface Exemption from Transportation Redevelopment Projects” from CR #8 because the total new impervious surface within the Project limits is less than 50 percent of the existing impervious surface, there is less than 5,000 square feet of new PGIS that is not fully dispersed within each TDA, and less than 0.75 acre of new PGPS that is not fully dispersed, will be added.

There are no required performance standards for water quality on this Project; however, water quality facilities have been proposed on this Project to improve the overall quality of stormwater runoff draining both to Zackuse Creek and Lake Sammamish. The City of Sammamish Water Quality Map shows this Project is within a Sensitive Lake Water Quality Treatment Area. The specific type of water quality facility proposed is Contech’s StormFilter units, following feedback from City of Sammamish maintenance personnel. These facilities are proposed to include ZPG filter media to provide basic treatment as approved per the KCSWDM.

4.4 FLOW CONTROL SYSTEM

Detention tank (pipe) flow control systems were selected and modeled for this Project to meet flow control standards. Modeling was accomplished using MGSFlood Version 4.55.

TDAs 2 and 3 require flow control to the performance standards noted in Section 4.3. In addition to meeting flow control performance standards for each TDA, the flow control facilities were sited to mitigate for increases in developed flows at the existing culvert crossings within steep-slope and erosion-hazard

areas. There are two detention pipe facilities within both TDA 2 and TDA 3. Between the two flow control facilities within each TDA, the new impervious target surface within that TDA is detained to historic conditions (till forest). The split in target mitigated surface between flow control facilities is based on the weighted percentage of contributing area to the facility according to available space for siting detention upstream.

Three iterations were run to size the flow control systems within TDAs 2 and 3. The first model iteration was run using the auto-size detention facility option to obtain an approximate volume-at-riser storage required to detain post-developed flows compared to pre-developed flows with mitigated area reverted to forested condition. The volume-at-riser was input into a spreadsheet which then calculates the stage-storage table for detention pipes, subtracting the bottom 6 inches of storage for future sediment buildup per the KCSWDM. The stage-storage detention information was then modeled in Iteration 2 to size the orifices and riser heights to meet the flow control performance standards. Finally, Iteration 3 was run adding in the offsite areas which contribute to the flow control system to verify that detention structure 100-year developed water surface elevation does not overtop the adjacent stormwater structure rims and calculate flows at the downstream culvert discharge points.

TDA 1 does not require flow control per CR #3. However, flow control is provided to mitigate for additional runoff draining towards an existing culvert whose downstream discharge lies within a steep slope and erosion hazard area. In this TDA, the detention pipe system was sized to detain post-developed flows to less than pre-developed condition rates. In this model, the pre-developed condition is not reverted to historic forested conditions, but rather to existing till grass conditions. Iteration 1 uses a pond auto-size module in MGSFlood, similar to the approach used for TDAs 2 and 3. For iteration 3, post-developed flows are split into the area receiving flow control and the area bypassing the flow control system, which enters the culvert downstream so that the point of compliance is evaluated at the downstream culvert endpoint. The iteration 3 model contains the stage-storage pipe detention data and orifices are sized to detain flows below existing conditions for the 2 and 10-year return periods in this iteration. Finally, model iteration 3 was run to ensure the offsite bypass flows can pass through the detention facility while providing at least 1 foot of freeboard from the rim elevations of adjacent structures.

4.5 WATER QUALITY SYSTEM

Four water quality facilities are provided to improve the water quality in the Zackuse Creek Basin. These facilities are Contech StormFilter units with 27-inch-tall ZPG filter cartridges. As CR #8 is not applicable to this Project, these units will provide basic treatment. On-line water quality flow rates were calculated for units WQ-1 and WQ-2, and the remaining two facilities consider the off-line flow rates with flow splitters upstream. The units are proposed to include the maximum number of cartridges for additional treatment and contingency at this stage in design. MGSFlood water quality results are included in **Appendix C** and the water quality unit design is summarized in **Table 4**.

Table 4. Water Quality Facility Design Summary

Water Quality Facility	Water Quality Flow Rate (cfs)	Off-line or On-line Flow Rate	StormFilter Facility Size, Number of Filter Cartridges	StormFilter Treatment Provided (cfs)
WQ – 1	0.04	On-line	SFMH48, 3 ZPG	0.075
WQ – 2	0.08	On-line	SFMH48, 3 ZPG	0.075
WQ – 3	0.32	Off-line	SFMH96, 14 ZPG	0.350
WQ – 4	0.29	Off-line	SFMH96, 14 ZPG	0.350

Notes:

cfs – cubic feet per second

5 CONVEYANCE SYSTEM ANALYSIS AND DESIGN

This section summarizes the design of the proposed stormwater collection and conveyance system. The stormwater conveyance pipe system on this Project has been modeled using AutoDesk's Storm and Sanitary Analysis (SSA) program with SCS TR-55 hydrology and time of concentration methodology. The TR-55 computation method was selected in lieu of the rational method per Table 3.2 of the KCSWDM as the rational method is more applicable for tributary areas less than 10 acres and the offsite area contributing to the system is greater than 20 acres. The SCS Type 1A 24-hour rainfall distribution was applied to rainfall depths input into the model. The rainfall depths used for the modeling are interpolated from KCSWDM isopluvial maps for the 25-year and 100-year, 24-hour storm events. To model the flows more accurately through the pipe system, the hydrodynamic link routing methodology was used. The pipe systems were modeled to ensure the proposed stormwater pipes convey the 25-year storm event without surcharging.

While the KCSWDM allows overtopping of structures in the 100-year storm event provided discharge can be routed safely downstream, the critical areas and roadway slopes adjacent to the Project do not provide a safe overflow route. Therefore, the 100-year hydraulic grade line was evaluated, and model results indicate no overtopping along the conveyance system occurs for this storm event. While a 1-foot freeboard was set in the model from the 100-year hydraulic grade line to structure rim, no pipes or facilities were oversized to provide this freeboard.

The SSA model includes both onsite and offsite contributing basins and offsite drainage tie-ins. Offsite basin hydrology has been modeled approximating the percentage of impervious and grass surface area within each basin and calculating a time of concentration based on flow path lengths, slopes, and surface types for larger offsite areas. The offsite areas are illustrated on **Figure 3** and piped connections to the proposed conveyance system are shown on the drainage plan and profile sheets.

The pipe material proposed follows Chapter 4 of the Sammamish Addendum to the 2021 KCSWDM. There are a few low cover pipes which are specifically called out as ductile iron pipes on the drainage profiles. The proposed storm sewer pipe slopes range from 0.26 percent to 11 percent slopes with most pipes in the 8 percent slope range. The 25-year velocities in the pipes are around 10 feet per second.

In addition to the pipe conveyance and catch basin structures modeled in SSA, there are also two flow splitters proposed on the Project upstream of water quality facilities WQ-3 and WQ-4, as noted on the drainage plan and profile sheets. These flow splitters are necessary to restrict the flows entering the StormFilter facilities due to the larger offsite area contributing to these locations. The flows entering StormFilter units WQ-1 and WQ-2 are below the maximum flow threshold and do not require a bypass system. The flow splitter design follows KCSWDM Figure 6.2.5.B Flow Splitter, Option B, due to the need for an orifice restrictor based on higher bypass flow compared to restricted water quality flow rate. The two flow splitters will have a riser "tee" section with orifice bottom plate and a separate riser with solid bottom and baffle to collect the bypass flows.

There are several short walls proposed throughout the Project to minimize grading impacts in steep-slope areas and limited right-of-way locations. The two soldier pile walls will require wall drains, as shown in the drainage plans. The proposed short rockery walls, averaging 2 feet in height, which are part of the Project improvements do not require underdrains.

Louis Thompson Road will be overlaid as part of this Project and existing structure rims within the paving sections will be adjusted to grade. An existing open-grate lid in the intersection drive lanes of East Lake Sammamish Parkway NE at the intersection of Louis Thompson Road will be replaced with a solid cover. Due to the curb ramp and adjacent sidewalk ramp slopes at this intersection, two through-curb inlet structures will be replaced with vaned grates. The East Lake Sammamish Parkway NE roadway is superelevated to the west near this intersection and these structures do not collect much of East Lake Sammamish Parkway NE surface runoff.

The City of Sammamish has also requested combination inlets in steep slope areas with tree cover, which have a higher stormwater collection efficiency. The through-curb portion of these inlets allows stormwater to be captured in the catch basins even if the grates are clogged with debris from adjacent trees. The locations of the combination inlets along the corridor have been coordinated with the City of Sammamish and are specified on the plans to address future maintenance considerations.

Another maintenance consideration that has been incorporated into the final design is the addition of shallow ditches at the back side of the sidewalk to help keep the sidewalks drier and free off offsite water and ice in the winter. These ditches are shown on the Drainage Plans and enter the new conveyance system via catch basins at the downstream end. These catch basins have debris cages to help trap offsite sediment and debris prior to entering the storm conveyance system.

Results from the 25-year and 100-year SSA model and flow splitter calculations are included in **Appendix B**.

6 SPECIAL REPORTS AND STUDIES

Special reports and studies conducted for the Project are submitted under a separate cover and include:

- Geotechnical Report, AESI
- Critical Areas Report, DEA
- Cultural Resources Report, ERSI

7 OTHER PERMITS

This section will describe the permits, agencies requiring the permits, and permit requirements that affect the drainage plan. No federal or state permits are anticipated for this Project. Project permits with the City of Sammamish include a clearing and grading permit, building permit, and Ecology General Stormwater Construction permit as indicated in the TIR Worksheet shown on **Figure 1**.

8 CSWPP ANALYSIS AND DESIGN

This section will describe the CSWPP Plan which consists of ESC measures as noted on the Erosion Control and Site Preparation Plans and Stormwater Pollution Prevention and Spill Control (SWPPS) measures. The CSWPP plan is included in **Appendix D**.

8.1 EROSION CONTROL PLAN

The Erosion Control and Site Preparation Plan proposes installing storm drain inlet protection on all storm drains, which may receive construction stormwater runoff to control onsite sediment. In addition, silt fence is also proposed as a perimeter BMP downslope of disturbed areas.

To control erosion, natural vegetation will be preserved outside of work zone limits and disturbed earth may be permanently stabilized and seeded if the schedule aligns with requirements per the Project specifications. Clearing within Project limits will be minimized to the extent necessary to perform the work, as noted on the plans. Disturbed earth must be stabilized with temporary measures per the CSWPP Plan.

Steep slope areas, as shown on **Figure 3**, are susceptible to a higher degree of erosion. There are existing steep slopes present on both the north and south sides of the Project throughout the corridor. Developed condition slopes are proposed to be restored to 2 horizontal:1 vertical (2H:1V) in most areas that are also subject to erosion if not properly stabilized. Topsoil and hydroseeding is proposed as a restoration measure for disturbed areas.

According to the Geotechnical Report, groundwater was observed as seepage on the southern slopes of the Project and was noted higher up on the slope at the east end of the Project. In addition to the ESC measures shown on the Erosion Control and Site Preparation Plans, the Contractor will also be required to control construction dewatering water and ensure discharges from the site meet National Pollutant Discharge Elimination System permit requirements.

With adjacent erosion hazard areas and location of the Project within a critical aquifer recharge area, construction stormwater infiltration BMPs should not be used.

The ESC measures and BMPs which apply to the Project per Section 1.2.5 of KCSWDM are detailed in the CSWPP Plan.

8.2 STORMWATER POLLUTION PREVENTION AND SPILL CONTROL PLAN

The CSWPP Plan identifies all activities that may contribute pollutants to surface and storm water during construction and describes the selection of specific SWPPS BMPs proposed. These BMPs are described the CSWPP, included in **Appendix D**.

The primary receiving water body for Project stormwater runoff is Zackuse Creek. According to Washington State Department of Ecology's Water Quality Atlas Map, Zackuse Creek is not on Ecology's 303d list of polluted water bodies. Zackuse Creek discharges into Lake Sammamish which is listed on Ecology's 303d Category 5 for both polychlorinated biphenyls and methyl mercury. There are no total maximum daily load requirements for Lake Sammamish. This Project's construction should not generate polychlorinated biphenyls or methyl mercury emissions. Burning of waste is not allowed and any equipment leaks or spills must be immediately contained, mitigated, and reported to Ecology.

9 BOND QUALITIES, FACILITY SUMMARIES, AND DECLARATION OF COVENANT

This section is not applicable to this Project as it is a publicly constructed and owned project.

10 OPERATIONS AND MAINTENANCE MANUAL

Maintenance and operations for stormwater facilities shall be performed in accordance with the 2021 KCSWDM Appendix A – Maintenance Requirements for Flow Control, Conveyance, and Water Quality Facilities. An operations and maintenance manual is provided in **Appendix E** for the stormwater facilities on this project, including water quality and flow control facilities, as well as standard maintenance procedures as recommended by the KCSWDM.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: King County Area, Washington
Survey Area Data: Version 18, Sep 8, 2022

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Jul 31, 2022—Aug 8, 2022

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend

Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI
AgC	Alderwood gravelly sandy loam, 8 to 15 percent slopes	21.9	31.0%
AkF	Alderwood and Kitsap soils, very steep	0.6	0.9%
InC	Indianola loamy sand, 5 to 15 percent slopes	17.4	24.7%
RaD	Ragnar fine sandy loam, 15 to 25 percent slopes	19.0	26.9%
RdC	Ragnar-Indianola association, sloping	11.6	16.4%
RdE	Ragnar-Indianola association, moderately steep	0.0	0.0%

NOTES

1. AREAS ARE DESIGNATED AS "XX# - ***YZ WHERE XX IS PROJECT AREA (PA) OR OFF-SITE AREA (OA), # IS THE TDA #, *** IS THE CATCH BASIN THE AREA IS DRAINING TO, Y IS THE ALPHABETICAL LETTER OF THE DRAINAGE AREA, AND Z IS I (IMPERVIOUS AREA) OR P (PERVIOUS AREA).
2. NOTE, AREAS DESIGNATED AS PERVIOUS ON THIS FIGURE AREA ARE A MIX OF OPEN SPACE AND IMPERVIOUS AREAS. WEIGHTED CURVE NUMBERS ARE ASSIGNED PER SOIL TYPE AND LAND USE APPROXIMATION AS DOCUMENTED ON CONVEYANCE AREA 3.

Subbasin Hydrology

Subbasin : {Catch Basin Boundaries}.OA2-100CP

Input Data

Area (ac) 0.66
Peak Rate Factor 484
Weighted Curve Number 86.95
Rain Gage ID ..... StormData

Composite Curve Number

32 Soil/Surface Description	Area (acres)	Soil Group	Curve Number
-	0.66	B	86.95
Composite Area & Weighted CN	0.66		86.95

Time of Concentration

TOC Method : SCS TR-55

Sheet Flow Equation :

Tc = (0.007 * ((n * Lf)^0.8)) / ((P^0.5) * (Sf^0.4))

Where :

Tc = Time of Concentration (hr)
n = Manning's roughness
Lf = Flow Length (ft)
P = 2 yr, 24 hr Rainfall (inches)
Sf = Slope (ft/ft)

Shallow Concentrated Flow Equation :

V = 16.1345 * (Sf^0.5) (unpaved surface)
V = 20.3282 * (Sf^0.5) (paved surface)
V = 15.0 * (Sf^0.5) (grassed waterway surface)
V = 10.0 * (Sf^0.5) (nearly bare & untilled surface)
V = 9.0 * (Sf^0.5) (cultivated straight rows surface)
V = 7.0 * (Sf^0.5) (short grass pasture surface)
V = 5.0 * (Sf^0.5) (woodland surface)
V = 2.5 * (Sf^0.5) (forest w/heavy litter surface)
Tc = (Lf / V) / (3600 sec/hr)

Where:

Tc = Time of Concentration (hr)
Lf = Flow Length (ft)
V = Velocity (ft/sec)
Sf = Slope (ft/ft)

Channel Flow Equation :

V = (1.49 * (R^(2/3)) * (Sf^0.5)) / n
R = Aq / Wp
Tc = (Lf / V) / (3600 sec/hr)

Where :

Tc = Time of Concentration (hr)
Lf = Flow Length (ft)
R = Hydraulic Radius (ft)
Aq = Flow Area (ft²)
Wp = Wetted Perimeter (ft)
V = Velocity (ft/sec)
Sf = Slope (ft/ft)
n = Manning's roughness

100-Year Storm Event

Project Description

File Name	SSA_Model.SPF
Description	pw.bentley.com_osbornconsulting-pw-01\francisco jimenez\dms27928\P_10-210058_STRM_Basin Areas.dwg

Project Options

Flow Units	CFS
Elevation Type	Elevation
Hydrology Method	SCS TR-55
Time of Concentration (TOC) Method	SCS TR-55
Link Routing Method	Hydrodynamic
Enable Overflow Ponding at Nodes	YES
Skip Steady State Analysis Time Periods	NO

Analysis Options

Start Analysis On	00:00:00	0:00:00
End Analysis On	00:00:00	0:00:00
Start Reporting On	00:00:00	0:00:00
Antecedent Dry Days	0	days
Runoff (Dry Weather) Time Step	0 01:00:00	days hh:mm:ss
Runoff (Wet Weather) Time Step	0 00:05:00	days hh:mm:ss
Reporting Time Step	0 00:05:00	days hh:mm:ss
Routing Time Step	30	seconds

Number of Elements

	Qty
Rain Gages	1
Subbasins	114
Nodes	101
Junctions	96
Outfalls	5
Flow Diversions	0
Inlets	0
Storage Nodes	0
Links	102
Channels	0
Pipes	102
Pumps	0
Orifices	0
Weirs	0
Outlets	0
Pollutants	0
Land Uses	0

Rainfall Details

SN	Rain Gage ID	Data Source	Data Source ID	Rainfall Type	Rain Units	State	County	Return Period (years)	Rainfall Depth (inches)	Rainfall Distribution
1	StormData	Time Series	100 Year from KC Manual	Cumulative	inches	Washington	King	100.00	3.95	SCS Type IA 24-hr

Subbasin Hydrology

Subbasin : {Catch Basin Boundaries}.OA2-100CP

Input Data

Area (ac) 0.66
Peak Rate Factor 484
Weighted Curve Number 86.95
Rain Gage ID ..... StormData

Composite Curve Number

32 Soil/Surface Description	Area (acres)	Soil Group	Curve Number
-	0.66	B	86.95
Composite Area & Weighted CN	0.66		86.95

Time of Concentration

TOC Method : SCS TR-55

Sheet Flow Equation :

Tc = (0.007 * ((n * Lf)^0.8)) / ((P^0.5) * (Sf^0.4))

Where :

Tc = Time of Concentration (hr)
n = Manning's roughness
Lf = Flow Length (ft)
P = 2 yr, 24 hr Rainfall (inches)
Sf = Slope (ft/ft)

Shallow Concentrated Flow Equation :

V = 16.1345 * (Sf^0.5) (unpaved surface)
V = 20.3282 * (Sf^0.5) (paved surface)
V = 15.0 * (Sf^0.5) (grassed waterway surface)
V = 10.0 * (Sf^0.5) (nearly bare & untilled surface)
V = 9.0 * (Sf^0.5) (cultivated straight rows surface)
V = 7.0 * (Sf^0.5) (short grass pasture surface)
V = 5.0 * (Sf^0.5) (woodland surface)
V = 2.5 * (Sf^0.5) (forest w/heavy litter surface)
Tc = (Lf / V) / (3600 sec/hr)

Where:

Tc = Time of Concentration (hr)
Lf = Flow Length (ft)
V = Velocity (ft/sec)
Sf = Slope (ft/ft)

Channel Flow Equation :

V = (1.49 * (R^(2/3)) * (Sf^0.5)) / n
R = Aq / Wp
Tc = (Lf / V) / (3600 sec/hr)

Where :

Tc = Time of Concentration (hr)
Lf = Flow Length (ft)
R = Hydraulic Radius (ft)
Aq = Flow Area (ft^2)
Wp = Wetted Perimeter (ft)
V = Velocity (ft/sec)
Sf = Slope (ft/ft)
n = Manning's roughness

Louis Thompson Tightline Project
Flow Splitter for WQ Facilities WQ-3 and WQ-4

Prepared By: J. Glovatchi
Reviewed By: L. Ruppert

Structure Elevations (ft)	
Rim of Splitter to WQ-3 (CB-180)	106.35
Rim of Splitter to WQ-4 (CB-365)	106.50
Invert	100.00

*Relative elevations, see profiles for details

Flow to WQ Facility
Orifice Diameter (inches) 3.00

Orifice Equation
$Q = Cd * A * (2gh)^{1/2}$
Cd = coefficient of discharge
A = area of orifice (SF)
g = acceleration from gravity (32.2 ft/s/s)
h = head acting on the orifice centerline (ft)

Overflow to Bypass Pipe
Top of Riser Elev.(ft) 102.00
Baffle Riser Length (Weir) (ft) 9.42
Baffle Riser Height Above WQ Outlet(ft) 2.00
Baffle Riser Diameter (in) 36

Weir Equation (per DOE Fig 3.2.16)
$Q = 3.099 * L * h^{3/2}$
L = length of weir crest in feet (2*pi*r)
h = head on weir crest in feet

Key Elevations to be Input into Plans:

Orifice to WQ Facility (Oulet IE)	=	100.00 ft
Top of Baffle Wall to Bypass	=	102.00 ft

100-yr Design Discharge Analysis (See Water Quality Facility Calculations)
Total 100-yr discharge to flow splitter to WQ-3 = 9.3 cfs
Total 100-yr discharge to flow splitter to WQ-4 7.0 cfs

Flow to WQ Facility
27" Cartridge, 3.05' Drop Flow Rate 11.25 gpm
27" Cartridge, 3.05' Drop Flow Rate 0.025 cfs
Target 96" MH - 14 Cartridge Max WQ Rate 0.351 cfs At Weir height/design WQ surface

Check Flow to WQ Facility at 100-yr Event < 1.10 x Design WQ Flow (KCSWDM 6.2.5.2)
1.10 x Design WQ Flow 0.380 cfs
100-yr Flow Rate to WQ Facility 0.370 cfs (*check higher 100-yr WSE, rounded up rate noted per table, actual interpolated rate is less)
100-yr WQ Flow Rate < 1.1 x Design WQ Flow? YES

pH	potential of hydrogen
SWMMWW	Stormwater Management Manual for Western Washington
TESC	Temporary Erosion and Sediment Control
TMDL	Total Maximum Daily Load

This construction stormwater pollution prevention plan (CSWPP) should be revised and updated to address changes in site conditions, new or revised government regulations, and additional on-site storm water pollution controls.

All revisions to the CSWPP must be documented on the CSWPP Revision Documentation Form, which should include the information shown below. The authorized facility representative who approves the CSWPP should be an individual at or near the top of the facility's management organization, such as the president, vice president, construction manager, site supervisor, or environmental manager. The signature of this representative attests that the CSWPP revision information is true and accurate. All CSWPP revisions will either be drafted or approved by the City of Sammamish and the Project Representative.

1 PROJECT INFORMATION

Project or Site Name: Louis Thompson Tightline Project (LTTP)

Location: Louis Thompson Rd between East Lake Sammamish Pkwy NE and 210th Pl SE

City: Sammamish **State:** Washington **Zip code:** 98074

Receiving waterbody: Zackuse Creek which drains to Lake Sammamish

This CSWPP documents the sediment control and water quality measures to be implemented during construction of the Louis Thompson Road Tightline project, including non-motorized and stormwater drainage improvements as well as water main relocation and overlay work along Louis Thompson Road. The CSWPP covers all on-site and off-site work.

The 13 elements of the CSWPP, according to the Department of Ecology (Ecology) and the associated King County CSWPPP Standards per Appendix D of the King County Stormwater Drainage Manual (KCSWDM) are documented in the following sections. Best management practices (BMPs) are documented in the following sections.

The CSWPP is designed to establish an overall summary of where and how specific BMPs will be implemented to prevent erosion and transport of sediment from and on the project side during construction. The Contractor is required to prepare a separate and updated CSWPP to meet the Contractor's means and methods, construction schedule, and project permit requirements.

The CSWPP is an active document that reflects the current conditions and changes throughout the life of the project. The Contractor is responsible for keeping the CSWPP updated and changes to the CSWPP shall be documented in the CSWPP Revision Documentation Form included in this report. If field conditions during construction should require additional BMPs or changes to the temporary BMPs, the Contractor shall modify this document accordingly. During active construction, the Contractor is required to keep this report, associated plans, and permit copy on-site.

1.1 EXISTING SITE CONDITIONS

Louis Thompson Road is a collector arterial roadway that runs north/south through Sammamish and connects 212th Avenue SE with East Lake Sammamish Parkway NE. The project extends approximately 0.67 miles, between East Lake Sammamish Parkway NE and 210th Pl SE, with an existing 2-lane cross section with ditches and culverts on the north side and an unimproved slope leading to Zackuse Creek on the south side. The private developments around Louis Thompson were primarily constructed in the 1970s and 1980s, with little to no construction work done to improve runoff in the neighborhood since then. As a result, the corridor has historically been impacted by uncontrolled stormwater runoff. This project intends to mitigate flooding, erosion, and landslide hazards. The existing area topography, vegetation, critical areas, and drainage patterns are summarized in **Table 1**.

TABLE 1 | EXISTING SITE CONDITIONS	
Total acreage within the limits of construction (LOC) including staging areas	The project site encompasses a total of 6.36 acres.
Disturbed acreage	The total disturbed area is 4.16 acres.
Existing structures and utilities	**Stormwater Drainage:** Currently, stormwater flows through existing culvert pipe connections and ditches along Louis Thompson Road, connecting with existing stream flows and surface flows south to Zackuse Creek and west to Lake Sammamish. Underground storm pipes are present on the western end of the project. This project includes a stormwater utility improvement plan to install a pipe network along Louis Thompson Road. **Existing Utilities:** Overhead power and communication lines exist along the northern edge of Louis Thompson Road, switching to the southern edge part way through the extent of the project site limits. Buried communication lines service residents adjacent to the project site. Underground water serves residents along the extents of the project site limits. Sewer lines only exist at limited locations within the project site, such as at one intersection with 205th Avenue NE. **Other Structures:** Roadway signage exists on both sides of the roadway along the extents of the project site limits. Guardrails exist along the southern edge of Louis Thompson Road between 206th Avenue NE and 210th Place SE.
Landscape topography	Along the south side of the project site, there is a forested steep hillside between 206th Avenue NE and 210th Place SE. The properties adjacent to the north edge of the road slope steeply southwest. Louis Thompson Road has multiple bends in the roadway but generally slopes west toward Lake Sammamish.
Drainage patterns	In general, surface and groundwater flow downstream across the project site from the east to the west through a system of drainage ditches and culverts. Culverts cross Louis Thompson Road and outfall to Zackuse Creek to the south. A culvert under East Lake Sammamish Parkway connects the project site flows to Lake Sammamish. Groundwater seeps also emerge throughout the hillside and flow as small surface water discharges towards the toe of the slope or to Zackuse Creek.
Existing Vegetation	The project area mostly consists of paved roadway with heavily forested area along the southern portion of the roadway on steep slopes. Residential parcels adjacent to the project limits have landscaped yards with mature trees existing on their properties.

Critical Areas (wetlands, streams, high erosion risk, steep or difficult to stabilize slopes)	**Wetlands:** Wetlands are present along Zackuse Creek to the southeast of the project site, but are not present within the limits of the project site. **Streams**: Zackuse Creek is a stream that is to the southeast of the project site. **Steep Slopes:** A section of the south side of the project site has steep slopes between 206th Avenue NE and 210th Place SE, mapped as an erosion and landslide hazard area by City of Sammamish GIS.

Table 2 presents a summary of the suspected and known contaminants associated with the construction of the project.

TABLE 2 | SUMMARY OF PROBABLE SITE POLLUTANT CONSTITUENTS			
Constituent (pollutant)	**Location**	**Depth**	**Concentration**
Concrete mix water	Project site	Surface	N/A
Vehicle fuels and lubricants	Project site	Surface	N/A

There are no known contaminants present on site.

1.2 PROPOSED CONSTRUCTION ACTIVITIES

Work on the project will include site preparation and the installation of temporary erosion and sediment control measures, clearing and grubbing, implementation of the storm water pollution prevention plan, and site restoration following the completion of construction.

The project will include the removal and replacement of existing pavement, overlay work, installation of a new storm sewer conveyance system, construction of sidewalks, curbs, gutters, reconstruction of private driveways, and retaining wall construction.

1.2.1 CONSTRUCTION PHASING

The Contractor will develop the construction phasing and schedule per the requirements in the project specifications. Before starting construction, the Contractor must prepare and receive approval for the CSWPP and dewatering plan, including the construction sequencing and water quality monitoring plan. Erosion and sediment control BMPs must be in place before any land disturbing activities.

During construction, the Contractor must control stormwater runoff per Section 2.2.3 of this report and test stormwater runoff per Section 4 of this Report for compliance with the National Pollutant Discharge Elimination System (NPDES) permit and other applicable project permit requirements. Potential monitoring locations have been identified on the erosion control plan drawings (**Appendix A** – Erosion and Sediment Control Plan). However, pending the Contractor's proposed construction phasing, these locations may be updated or eliminated.

Erosion and sediment control BMPs must be monitored throughout the phased construction of the project to ensure the BMPs are functioning to meet water quality discharge standards. After final stabilization is achieved at the end of the project, the Contractor must remove the temporary erosion and sediment control BMPs and coordinate approval with the project representative.

1.2.2 CONSTRUCTION SCHEDULE

Construction is expected to start during the second quarter of 2024. The Contractor will develop the construction schedule in line with the Project Specifications.

2 CONSTRUCTION STORMWATER BEST MANAGEMENT PRACTICES (BMPS)

To control on-site sediment, the following BMPs per the KCSWDM, unless otherwise noted, will be implemented per Plan prior to starting any construction activities:

- Ecology's BMP C101: Preserving Natural Vegetation
- Ecology's BMP C103: High Visibility Plastic or Metal Fence (see Plans)
- Ecology's BMP C150: Materials on Hand
- D.2.1.2.3 Nets and Blankets, as needed
- D.2.1.2.4 Plastic Covering, as needed
- D.2.1.2.6 Temporary and Permanent Seeding
- D.2.1.3.1 Silt Fence (see Plans)
- D.2.1.4.1 Stabilized Construction Entrance, as needed
- D.2.1.4.2 Construction Road/Parking Area Stabilization – for parking/staging areas, as needed
- D.2.1.4.3 Wheel Wash
- D.2.1.5.3 Storm Drain Inlet Protection
- D.2.1.6.5 Outlet Protection (see Plans)
- D.2.1.7 Dewatering Control
- D.2.2.1 Concrete Handling
- D.2.2.3 Sawcutting and Surfacing Pollution Prevention
- D.2.2.4 Material Delivery, Storage, and Containment
- D.2.2.2 Concrete Washout Area
- D.2.2.7 High pH Neutralization Using CO2
- D.2.3.1 CSWPP Supervisor
- Redirect Runoff from Work Zone Along Roadway Super Elevation
- Street Cleaning
- Temporary Stormwater Bypass
- Temporary Cofferdams
- Temporary Storage Tanks (Baker Tanks)

These BMPs will be maintained throughout the project and will be inspected at regular intervals and following significant storm events, as required by the City of Sammamish, Ecology rules and regulations, as well as other applicable project permits and project specifications. The Contractor will provide a maintenance and inspection plan that includes identification and contact information for the Erosion and Sediment Control (ESC) project lead and backup contacts.

Although every attempt has been made to identify appropriate BMPs at specific locations throughout the project, situations will arise that require additional BMPs to be implemented. Therefore, erosion prevention and sediment control materials are to be kept on the project site at all times to be used for emergency situations, such as unexpected heavy summer rains. Ecology BMP C150 lists recommended materials and quantities to be kept on site. The construction manager shall verify that materials on hand are in place prior to construction and regularly inventoried during construction.

The following sections outline the 13 elements required for a CSWPP according to the Ecology Stormwater Management Manual for Western Washington (SWMMWW) and the corresponding selected CSWPP Standards per Appendix D of the KCSWDM that may be installed at the project site during construction. All identified BMPs and BMPs shown on the plans are minimum requirements based on the

known conditions. Construction sites have ever changing conditions. As a result, additional BMPs may have to be provided as the ESC Lead deems necessary.

2.1 ELEMENT 1: CLEARING LIMITS

Prior to any land disturbing activities, including clearing and grading, clearly mark all clearing limits, sensitive areas, and their buffers to remain, as well as the trees to be preserved within the construction area. These shall be clearly marked, both in the field and on the plans, to prevent damage and offsite impacts. Plastic, metal, or stake wire fence may be used to mark the clearing limits. The duff layer, native topsoil, and natural vegetation shall be retained in an undisturbed state to the maximum extent practicable. If it is not practicable to retain the duff layer in place, it should be stockpiled on-site, covered to prevent erosion, and replaced immediately upon completion of the ground disturbing activities.

Special consideration will be given to construction activities immediately adjacent to sensitive areas. Stormwater conveyances and drainage ways will be given special consideration on this project so that all construction personnel understand the requirement to prevent the degradation of water quality.

Selected BMPs for Element 1:

- BMP C101: Preserving Natural Vegetation
- Ecology's BMP C103: High Visibility Plastic or Metal Fence (see Plans)
- D.2.1.3.1 Silt Fence (see Plans)

2.2 ELEMENT 4: TRAFFIC AREA STABILIZATION

Construction vehicles entering and exiting the project site will use only identified and approved access points. The Contractor shall determine construction access points before starting the project. Approved construction access points will be marked on plans and in the field, as necessary, to prevent unauthorized access and to limit further disturbance of environmental resources and surrounding neighborhoods.

Sediment drag-out onto the street will be limited by effective implementation of construction road and entrance stabilization measures. Only essential equipment will be allowed in the disturbed areas and all equipment will be cleaned of loosed sediment prior to moving offsite. Equipment will be cleaned using a brush or broom and, if necessary, wheel washing stations. The construction entrance will be maintained, as needed, to prevent offsite transport of sediment.

If sediment is tracked off site, public roads shall be cleared thoroughly at the end of each workday, or more frequently during wet weather, if necessary, to prevent sediment from entering waters of the State. Manual shoveling or dry sweeping shall be employed to remove sediment from the roads, and the collected sediment shall be transported to a controlled sediment disposal area. Use of water to wash down surfaces will be prohibited unless specifically approved by the ESC Lead to assure that turbid water is appropriately managed and treated prior to discharge. Street wash wastewater shall be controlled by pumping back on-site or otherwise prevented from discharging into the downstream waters of the State. The Contractor shall maintain all public roadways with street sweeping as necessary to remove sediment.

Selected BMPs for Element 2:

- D.2.1.4.1 Stabilized Construction Entrance, as needed
- D.2.1.4.3 Wheel Wash
- D.2.1.4.2 Construction Road/Parking Area Stabilization – for parking/staging areas, as needed

2.3 ELEMENT 9: FLOW CONTROL

To protect properties and waterways downstream of the project site from erosion and the associated discharge of turbid waters, stormwater discharges from the site will be controlled. Permanent detention tanks are proposed on the project site to limit flows from the proposed site development. During construction, the Contractor may use temporary storage tanks or temporary sediment traps. The proposed detention pipes may be used during construction. For pipe capacity calculations, see the Technical Information Report, Appendix C – Flow Control and Water Quality Calculations. Any proposed detention pipes used for flow control during construction shall being cleaned of sediment before the end of construction.

During construction, offsite run-on ditch flows along Louis Thompson Road will also be maintained and routed around the construction limits.

Selected BMPs for Element 3:

- Temporary Cofferdams
- Temporary Storage Tanks (Baker Tanks)

2.4 ELEMENT 4: INSTALL SEDIMENT CONTROLS

To minimize the discharge of pollutants from the project, effective erosion and sediment control measures are to be installed and maintained at the site. Construction activities such as excavation, clearing and grubbing, and grading will result in disturbed ground and increased risk of turbid water. Limiting the amount of disturbed area, phasing construction, and preserving natural vegetation to the maximum extent feasible will help to reduce the potential for sediment tracking off-site. All stormwater runoff from disturbed ground areas shall pass through appropriate sediment removal BMPs before leaving the construction site.

Prior to construction, general soil management procedures shall be established with respect to dust suppression, soil screening, stockpiling, sampling, transportation, and disposal. When temporary stockpile storage is needed on-site, the soil must be covered with plastic sheeting and secured at the edges to prevent wind erosion and saturation with rain.

Inlet protection will be utilized for existing and newly installed catch basins and drainage structures that have the potential for receiving construction stormwater. Where necessary, check dams will be installed in existing and new conveyance ditches to collect sediment. Silt fence, temporary curb, and wattles are also other perimeter sediment control best management practices (BMPs) that may be utilized to contain sediment on-site. Street cleaning, stabilized construction entrances, and wheel washes may also be utilized to control sediment track-out onto existing paved roads.

Selected BMPs for Element 3:

- BMP C101: Preserving Natural Vegetation
- D.2.1.4.1 Stabilized Construction Entrance, as needed
- D.2.1.5.3 Storm Drain Inlet Protection (see Plans)
- Street Cleaning

To avoid any potential sediment control issues, the project CESCL will immediately implement alternative BMPs at the first sign that any of the existing BMPs are ineffective or failing.

2.5 ELEMENT 4: STABILIZE SOILS

Exposed and unworked soils will be protected with temporary seeding and mulching as well as plastic sheeting over gravel or stockpiles over the weekends and when there is a possibility of rain. Per KCSWM guidelines, summarized in **Table 3**, no soils shall remain exposed and unworked for more than seven (7) days in the dry season and more than two (2) days during the wet season. The project is expected to be completed over the course of several months in different seasons of weather.

TABLE 3 | SOIL STABILIZATION REQUIREMENTS FOR THE WET AND DRY SEASON WEST OF THE CASCADE MOUNTAIN CREST

Season	Dates	Number of Days Soils Can be Left Exposed
During the Dry Season	May 1 – September 30	7 days
During the Wet Season	October 1 – April 30	2 days

Soils must be stabilized at the end of the shift before a holiday or a weekend, as necessary, based on the weather forecast.

Selected BMPs for Element 4:

- D.2.1.2.6 Temporary and Permanent Seeding
- D.2.1.2.3 Nets and Blankets, as needed
- D.2.1.2.4 Plastic Covering, as needed

2.6 ELEMENT 5: PROTECT SLOPES

The slopes along the south edge of the project site can be categorized as steep slopes. BMPs will be installed immediately after any disturbance to the steep slopes. When temporary stockpile storage is needed on-site, soil must be covered with plastic sheeting and secured at the edges to prevent wind erosion and infiltration of rain.

Selected BMPs for Element 5:

- D.2.1.2.6 Temporary and Permanent Seeding
- D.2.1.2.3 Nets and Blankets, as needed
- D.2.1.2.4 Plastic Covering, as needed
- D.2.1.3.1 Silt Fence (see Plans)

2.7 ELEMENT 6: PROTECT DRAIN INLETS

There are several existing storm drain structures within the project site, which will need to be protected prior to starting construction. Any newly installed catch basins, which may receive construction stormwater runoff, should also receive Storm Drain Inlet Protection. Temporary curb may also be used to divert construction stormwater away from drainage systems where needed.

Selected BMPs for Element 6:

- D.2.1.5.3 Storm Drain Inlet Protection

2.8 ELEMENT 7: STABILIZE OUTLETS

If temporary drainage pipes are installed for offsite flow conveyance or conveyance of construction work zone area flows, outlet protection will be placed at the pipe ends to reduce erosion and scour at the outlet locations. If the Contractor installs temporary on-site conveyance pipes or channels, they shall be designed, constructed, and stabilized to prevent erosion from the peak 10-year, 24-hour storm event.

Selected BMPs for Element 7:

- D.2.1.2.6 Temporary and Permanent Seeding
- D.2.1.2.3 Nets and Blankets,
- D.2.1.2.4 Plastic Covering
- D.2.1.6.5 Outlet Protection (see Plans)
- Temporary Stormwater Bypass

2.9 ELEMENT 8: CONTROL POLLUTANTS

All pollutants including waste materials and demolition debris that occur on site during construction shall be managed and disposed of in a manner that does not cause contamination of storm water or the waters of the State. The construction site will be kept clean, well organized, and free of debris. The potential pollutants anticipated to be at the site are summarized in **Table 2**.

The Contractor shall prevent visible dust during excavation, transportation, and placement operations. The Contractor shall implement dust control measures, such as spraying soil with water during excavation and grading operations. Contaminated soil spillage and airborne dust during transportation should be prevented. All soil must be covered during transport.

The Contractor will provide a containment plan for handling concrete mix water, vehicle fuels and lubricants, and for water main disinfection at the time of the new water main construction and connection. Containment will be implemented prior to the start of any of these pollution-generating activities.

Maintenance, fueling, and repair of heavy equipment and vehicles is expected to occur onsite the contractor will be required to provide a final list of chemicals, fuels, or oils that will be on site. In addition, a security and containment plan will need to be approved and implemented prior to bringing any chemicals, fuels, or oils on to the site. The Contractor is required to prepare a Pollution Prevention and Spill Contingency Response Plan per project specifications.

A list of known pH-modifying sources that are expected to be on-site is presented in **Table 4**. Concrete wastewater will be fully contained at the time of concrete placement. All pumping and mixer washouts will be temporarily placed into containment, hauled off site, and properly disposed of. Concrete trucks must not be washed out onto the ground, or into storm drains, open ditches, streets, or streams. Excess concrete must not be dumped on-site, except in designated concrete washout areas with appropriate BMPs installed.

TABLE 4 | PH-MODIFYING SOURCES

	None
X	Bulk cement

TABLE 4 | PH-MODIFYING SOURCES	
	Cement kiln dust
	Fly ash
X	Other cementitious materials
X	New concrete washing or curing waters
X	Waste streams generated from concrete grinding and sawing
X	Exposed aggregate processes
X	Dewatering concrete vaults
X	Concrete pumping and mixer washout waters
	Recycled concrete
	Other (for example, calcium lignosulfate) [please describe]

Selected BMPs for Element 8:

- D.2.2.1 Concrete Handling
- D.2.2.3 Sawcutting and Surfacing Pollution Prevention
- D.2.2.4 Material Delivery, Storage, and Containment
- D.2.2.2 Concrete Washout Area
- D.2.2.7 High pH Neutralization Using CO_2

2.10 ELEMENT 9: CONTROL DE-WATERING

Dewatering is expected to be required for the project site. Installation of the dewatering system and containment will be completed prior to any trench excavation. All sediment-laden water is required to be properly disposed of to prevent discharge to Waters of the State. Proper disposal methods are summarized in **Table 5**.

TABLE 5 | DEWATERING BMPS	
	Infiltration
X	Transport off-site in a vehicle (vacuum truck for legal disposal)
X	Ecology-approved on-site chemical treatment or other suitable treatment technologies
X	Sanitary or combined sewer discharge with local sewer district approval (last resort)
X	Use of sedimentation bag with discharge to ditch or swale (small volumes of localized dewatering)

The Contractor will be required to provide a dewatering plan that includes turbidity sampling. Inspection and documentation will be completed at minimum intervals and after significant storms as required and defined by the project permits and specifications. The maintenance and inspection plan to be provided by the Contractor, will include identification and contact information for the ESC project lead and backup contacts. The Contractor will identify a responsible person, and City staff will provide oversight.

Selected BMPs for Element 9:

- D.2.1.7 Dewatering Control

2.11 ELEMENT 10: MAINTAIN BMPS

All temporary and permanent ESC BMPs shall be maintained and repaired as needed to ensure continued performance of their intended function. Maintenance and repair shall be conducted in accordance with each BMP specification (see *Volume II of the SWMMWW*).

Visual monitoring of all BMPs installed at the site will be conducted per project specifications. If the site becomes inactive and is temporarily stabilized, the inspection frequency may be reduced to once every calendar month.

All temporary ESC BMPs shall be removed within 30 days after final site stabilization is achieved or after the temporary BMPs are no longer needed or as directed by the Project Representative.

Trapped sediment shall be stabilized on-site or removed. Disturbed soil resulting from removal of either BMPs or vegetation shall be permanently stabilized.

Additionally, protection must be provided for all BMPs installed for the permanent control of stormwater from sediment and compaction. BMPs that are to remain in place following completion of construction shall be examined and restored to full operating condition. If sediment enters these BMPs during construction, the sediment shall be removed, and the facility shall be returned to conditions specified in the construction documents.

Selected BMPs for Element 10:

- BMP C150: Materials on Hand
- D.2.3.1 CSWPP Supervisor

2.12 ELEMENT 11: MANAGE THE PROJECT

The project will be managed based on the following principles:

- Projects will be phased to the maximum extent practicable and seasonal work limitations will be considered.
- Inspection and monitoring:
    - Inspection, maintenance, and repair of all BMPs will occur as needed to ensure performance of their intended function.
    - Site inspections, monitoring, and sampling locations will be in accordance with the Construction Stormwater General Permit (CSWGP).
    - A CESCL shall be on-site or on-call at all times.
- Maintain an updated CSWPP.
    - As site work progresses the CSWPP will be modified routinely to reflect changing site conditions. The CSWPP will be reviewed monthly to ensure the content is current.

Applicable Management BMPs are identified in **Table 6**.

TABLE 6 | DEWATERING BMPS	
X	Design the project to fit the existing topography, soils, and drainage patterns
X	Emphasize erosion control rather than sediment control
X	Minimize the extent and duration of the area exposed

TABLE 6 | DEWATERING BMPS	
X	Keep runoff velocities low
X	Retain sediment on-site
X	Thoroughly monitor site and maintain all ESC measures
X	Schedule major earthwork during the dry season
	Other [please describe]

A template for a phased BMP implementation schedule is provided in **Table 7**. This form shall be updated and modified as the project progresses.

TABLE 7 | BMP IMPLEMENTATION SCHEDULE

Phase of Construction Project	Stormwater BMPs	Date	Wet/Dry Season
Site Preparation	*BMP C103*	*[MM/DD/YYY]*	[Insert season]
[Insert construction activity]	[Insert BMP]	[MM/DD/YYY]	[Insert season]

2.13 ELEMENT 12: PROTECT LOW IMPACT DEVELOPMENT (LID) BMPS

No LID BMP facilities will be installed in this project. There are also no known existing LID BMPs within project limits.

3 POLLUTION PREVENTION TEAM

Table 8 is provided as a template for team member information and coordination as members are identified.

TABLE 8 | TEAM INFORMATION

Title	Name	Phone Number	Email
Certified Erosion and Sediment Control Lead (CESCL)	[TBD]	[TBD]	[TBD]
Resident Engineer	[TBD]	[TBD]	[TBD]
Emergency Ecology Contact	[TBD]	[TBD]	[TBD]
Emergency Permittee or Owner Contact (City of Sammamish)	Jed Ireland, P.E.	(425) 295-0563	jireland@ sammamish.us
Non-Emergency Owner Contact (City of Sammamish)	Toby Coenen, P.E.	(425) 295-0567	tcoenen@ sammamish.us
Monitoring Personnel	[TBD]	[TBD]	[TBD]
Ecology Regional Office	Northwest Regional Office	(425) 549-0000	nwroerts@ ecy.wa.gov

4 MONITORING AND SAMPLING REQUIREMENTS

Monitoring includes visual inspection, sampling for water quality parameters of concern, and documenting of the inspection and sampling findings in a site log book. A site log book will be maintained for all on-site construction activities and will include the following:

- A record of the implementation of the CSWPP and other permit requirements
- Site inspections
- Stormwater sampling data

A blank form is provided as a template in **Appendix C** – Site Inspection Form.

The site log book must be maintained on-site within reasonable access to the site and be made available upon request to Ecology or the local jurisdiction.

4.1 SITE INSPECTION

Site inspections will be conducted per project specifications and per the Project Representative. For sites that are temporarily stabilized and inactive, the required frequency is reduced to once per calendar month.

The discharge points are indicated on the Erosion and Sediment Control Plan (see **Appendix A** – Erosion and Sediment Control Plan) and in accordance with the applicable requirements of the CSWGP.

4.2 STORMWATER QUALITY SAMPLING

4.2.1 TURBIDITY SAMPLING

Requirements include calibrated turbidity meter or transparency tube to sample site discharges for compliance with the CSWGP. Sampling will be conducted at all discharge points per the project specifications.

Method for sampling turbidity is per **Table 9**:

TABLE 9 | TURBIDITY SAMPLING METHOD	
X	Turbidity Meter or Nephelometer (required for disturbances 5 acres or greater in size)
	Transparency Tube (option for disturbances less than 1 acre and up to 5 acres in size)

The benchmark for turbidity value is 25 nephelometric turbidity units (NTU) and a transparency less than 33 centimeters. If the discharge's turbidity is 26 to 249 NTU **or** the transparency is less than 33 cm and equal to or greater than 6 cm, the following steps will be conducted:

1. Review the CSWPP for compliance with Special Condition S9. Make appropriate revisions within 7 days of the date the discharge exceeded the benchmark.
2. Immediately begin the process to fully implement and maintain appropriate source control and treatment BMPs as soon as possible. Address the problems within 10 days of the date the discharge exceeded the benchmark. If installation of necessary treatment BMPs is not feasible within 10 days, Ecology may approve additional time when the Permittee requests an extension within the initial 10-day response period.
3. Document BMP implementation and maintenance in the site log book.

If **either** the turbidity exceeds 250 NTU **or** the transparency is 6 cm or less at any time, the following steps will be conducted:

1. Telephone or submit an electronic report to the applicable Ecology Region's Environmental Report Tracking System (ERTS) within 24 hours, which can be accessed athttps://www.ecology.wa.gov/About-us/Get-involved/Report-an-environmental-issue.
    - Northwest Region (King, Kitsap, Island, San Juan, Skagit, Snohomish, Whatcom): (425) 649-7000
2. Immediately start the process to fully implement and maintain appropriate source control and treatment BMPs as soon as possible. Address the problems within 10 days of the date the discharge exceeded the benchmark. If installation of necessary treatment BMPs is not feasible within 10 days, Ecology may approve additional time when the Permittee requests an extension within the initial 10-day response period
3. Document BMP implementation and maintenance in the site log book.
4. Continue to sample discharges daily until one of the following is true:
    - Turbidity is 25 NTU (or lower).
    - Transparency is 33 cm (or greater).
    - Compliance with the water quality limit for turbidity is achieved.
        - 1 - 5 NTU over background turbidity, if background is less than 50 NTU
        - 1% - 10% over background turbidity, if background is 50 NTU or greater

The discharge stops or is eliminated.

4.2.2 pH SAMPLING

pH monitoring is required for "significant concrete work," that is, poured concrete or recycled concrete that amounts to greater than 1000 cubic yards over the lifetime of the project. The use of engineered soils, specifically soil amendments that include but are not limited to Portland cement-treated base [CTB], cement kiln dust [CKD], or fly ash, also requires pH monitoring.

For significant concrete work, pH sampling will start the first day concrete is poured and continue until the concrete is cured, which is typically three (3) weeks after the last pour.

For engineered soils and recycled concrete, pH sampling starts when the engineered soils or recycled concrete is first exposed to precipitation and continues until the area is fully stabilized.

If the measured pH is 8.5 or greater, the following measures will be taken:

1. Prevent high pH water from entering storm sewer systems or surface water.
2. Adjust or neutralize the high pH water to a range of 6.5 to 8.5 su using appropriate technology such as carbon dioxide (CO_2) sparging (liquid or dry ice).
3. Written approval will be obtained from Ecology prior to using any chemical treatment other than CO_2 sparging or dry ice.

Method for sampling pH per **Table 10**:

TABLE 10 | pH SAMPLING METHOD

X	pH meter
	pH test kit

5 DISCHARGES TO 303(D) OR TOTAL MAXIMUM DAILY LOAD (TMDL) WATERBODIES

5.1 303(D) LISTED WATERBODIES

Per March 2023 data received through Ecology's Water Quality Atlas tool, no known 303(d) listed waterbodies exist within the project site.

6 REPORTING AND RECORD KEEPING

6.1 RECORD KEEPING

6.1.1 SITE LOG BOOK

A site log book will be maintained for all on-site construction activities and will include the following:

- A record of the implementation of the CSWPP and other permit requirements
- Site inspections
- Sample logs

6.1.2 RECORDS RETENTION

Records will be retained during the life of the project and for a minimum of three (3) years following the termination of permit coverage in accordance with Special Condition S5.C of the CSWGP.

Permit documentation to be retained on-site:

- CSWGP
- Permit Coverage Letter
- CSWPP
- Site Log Book

Permit documentation will be provided within 14 days of receipt of a written request from Ecology. A copy of the CSWPP or access to the CSWPP will be provided to the public when requested in writing in accordance with Special Condition S5.G.2.b of the CSWGP.

6.1.3 UPDATING THE CSWPP

The CSWPP will be modified if either one of the following occurs:

- The CSWPP is found ineffective in eliminating or significantly minimizing pollutants in stormwater discharges from the site.
- There is a change in design, construction, operation, or maintenance at the construction site that has, or could have, a significant effect on the discharge of pollutants to waters of the State.

The CSWPP will be modified within seven (7) days if inspections or investigations determine additional or modified BMPs are necessary for compliance. An updated timeline for BMP implementation will be prepared.

6.2 REPORTING

6.2.1 DISCHARGE MONITORING REPORTS

Cumulative soil disturbance is greater than one (1) acre; therefore, Discharge Monitoring Reports will be submitted to Ecology as water quality sampling will be required during construction.

6.2.2 NOTIFICATION OF NONCOMPLIANCE

If any of the terms and conditions of the permit are not met, and the resulting noncompliance may cause a threat to human health or the environment, the following actions will be taken:

1. The Project Representative will be notified within 24 hours of the failure to comply, and the Contractor will coordinate the proposed corrective actions with the Project Representative.
2. Within 24 hours of the failure to comply, the applicable Regional office ERTS phone number will be called to notify Ecology. (Regional office numbers listed below.)
3. Immediate action will be taken to prevent the discharge or pollution or to otherwise stop or correct the noncompliance. If applicable, sampling and analysis of any noncompliance will be repeated immediately, and the results will be submitted to Ecology within five (5) days of becoming aware of the violation.
4. A detailed written report describing the noncompliance will be submitted to Ecology within five (5) days, unless requested earlier by Ecology.

Anytime turbidity sampling indicates turbidity is 250 NTUs or greater, or water transparency is 6 cm or less, the Ecology Regional office will be notified by phone within 24 hours of analysis, as required by Special Condition S5.A of the CSWGP.

- Northwest Region at (425) 649-7000 for Island, King, Kitsap, San Juan, Skagit, Snohomish, or Whatcom County

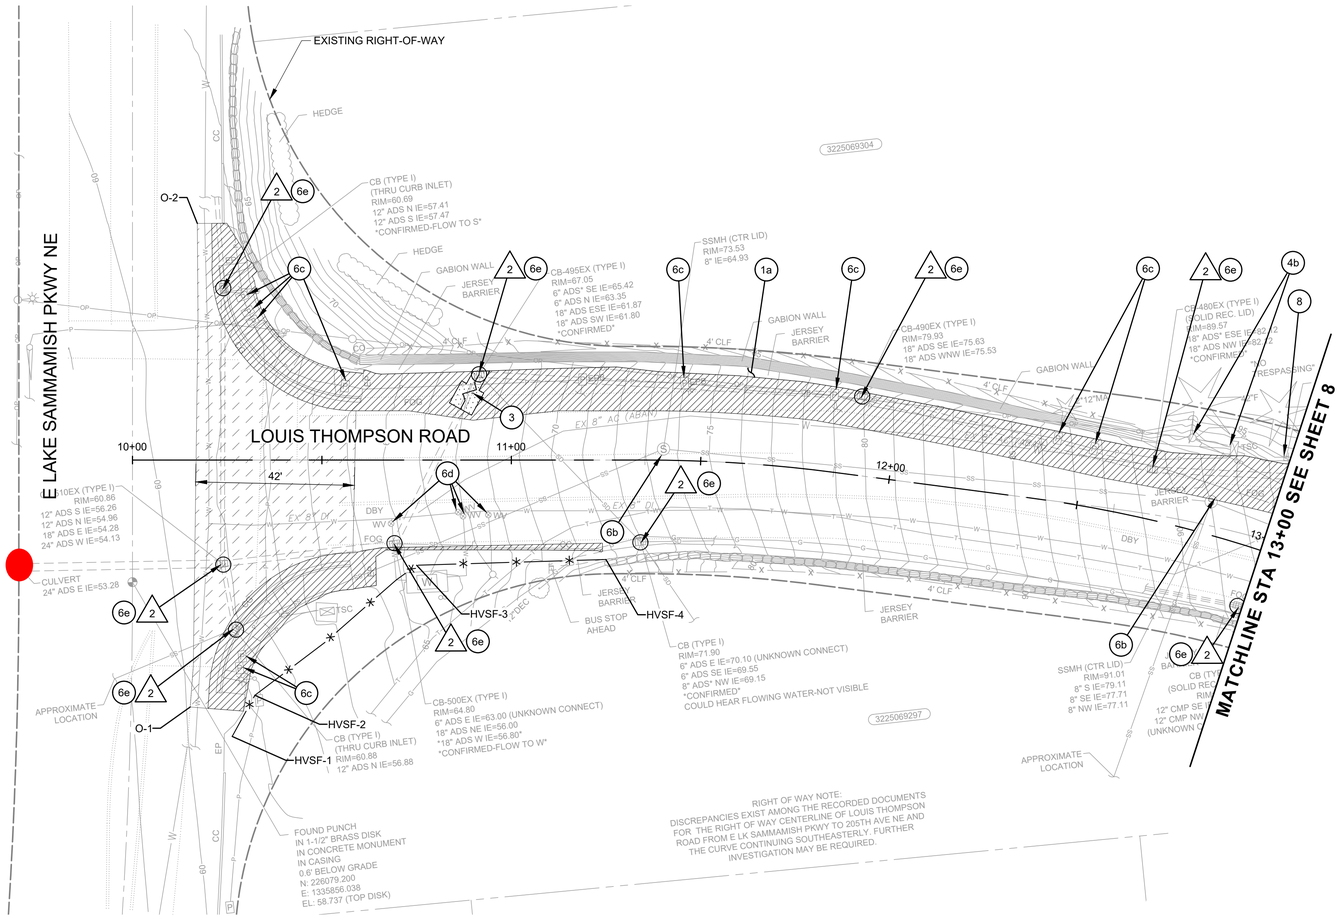
Include the following information:

1. Your name and Phone number
2. Permit number
3. City or County of project
4. Sample results
5. Date and Time of call
6. Date and Time of sample
7. Project name

In accordance with Special Condition S4.D.5.b of the CSWGP, the Ecology Regional office will be notified if chemical treatment other than CO_2 sparging is planned for adjustment of high pH water.

APPENDIX A – EROSION AND SEDIMENT CONTROL PLAN

SEC. 32, T. 25N, R. 6E, W.M.



GENERAL NOTES:

1. LOCATION OF UTILITIES SHOWN ON PLANS ARE APPROXIMATE. CONTRACTOR TO FIELD VERIFY ALL UTILITY LOCATIONS WITHIN THE PROJECT LIMITS, INCLUDING SERVICE LINES WITHIN PRIVATE PROPERTIES AND DRIVEWAYS.
2. PRESERVE AND PROTECT ANY EXISTING FEATURES TO REMAIN WITHIN THE PROJECT LIMITS.
3. ADJUST ALL SURFACE UTILITIES AND MONUMENTS WITHIN THE PAVING AREA TO GRADE AFTER OVERLAY. FOR OVERLAY LIMITS SEE SHEETS 46-55.
4. CONTRACTOR TO NOTIFY PROPERTY OWNER(S) TWO (2) WEEKS PRIOR TO CONSTRUCTION, TO COORDINATE DRIVEWAY ACCESS. DRIVEWAY INGRESS/EGRESS MUST BE MAINTAINED AT ALL TIMES UNLESS OTHERWISE AGREED TO BY THE PROPERTY OWNER.
5. DISTURBANCE AND CLEARING LIMITS SHALL BE MINIMIZED TO THE AREA NECESSARY FOR INSTALLATION OF TEMPORARY AND PERMANENT ELEMENTS. ONLY REMOVE THE MINIMUM VEGETATION NEEDED FOR CONSTRUCTION ACTIVITIES. CLEARING LIMITS SHALL BE DELINEATED USING A HVF AND GENERALLY MATCH THE ROW AND TCE LIMITS, UNLESS OTHERWISE SHOWN IN SHEETS 7-16.
6. PROTECT EXISTING TREE WITHIN THE WORK AREA, UNLESS SHOWN AS TO BE REMOVED IN SHEETS 7-16 AND WITHIN 5 FEET FROM THE WORK LIMITS IN ACCORDANCE WITH SHEET 17 DETAIL 1 OR 2 AS FEASIBLE TO PERFORM WORK.
7. INLET PROTECTION MEASURES MUST BE INSTALLED ON PROPOSED STORM DRAINAGE STRUCTURES WHICH RECEIVE CONSTRUCTION STORMWATER RUNOFF.
8. SEE APPENDIX X OF PROJECT'S SPECIAL PROVISIONS FOR WORK (SITE PREPARATION AND PROPOSED CONDITION) RELATED TO THE WATER LINE, HYDRANTS, AND METERS/VALVES FROM STA 13+50 TO STA 45+50. THE EXISTING AC WATER MAIN WILL BE ABANDONED IN PLACE WITHIN THESE LIMITS AND ONLY BE REMOVED AT LOCATIONS WHERE IT IS CONFLICTING WITH THE PROPOSED WORK.
9. FOR ROADWAY EXCAVATION INCLUDING HAUL, SEE SHEET 44 AND DETAIL 3 SHEET 17.
10. OVERHEAD COMMUNICATION WIRES WILL BE RAISED APPROX. 20 FT FROM EXISTING GROUND AND SLACK REMOVED.

EROSION CONTROL NOTES:

1. INSTALL HIGH VISIBILITY FENCE/HIGH VISIBILITY SILT FENCE PER WSDOT STANDARD PLAN I-10.10/I-30.17.
2. INSTALL STORM DRAIN INLET PROTECTION PER WSDOT STANDARD PLAN I-40.20.
3. REDIRECT RUNOFF FROM WORK ZONE ALONG ROADWAY SUPER ELEVATION.

SITE PREPARATION NOTES:

1. REMOVAL OF STRUCTURES AND OBSTRUCTIONS
   a. REMOVE EXISTING CONCRETE BARRIER (FULL LENGTH) AT THIS VICINITY.
   b. REMOVE AND RESET SOLAR LIGHTS WITHIN DRIVEWAYS.
   c. REMOVE BOLLARD.
   d. REMOVE TIMBER LANDSCAPING WALL.
   e. REMOVE AND RELOCATE MAILBOX. SEE SHEET 53 FOR NEW LOCATION.
   f. REMOVE EXISTING FENCE.
   g. REMOVE AND RESET EXISTING FENCE.
   h. REMOVE AND RESET EXISTING LANDSCAPE BLOCKS.
   i. REMOVE EXISTING CONCRETE CURB
   j. REMOVE EXISTING CONCRETE UTILITY VAULT
2. PLUG EXISTING PIPE.
3. TRIM EXISTING PIPE TO LENGTH FOR CONNECTION TO DRAINAGE STRUCTURE. SEE SHEETS 18-27.
4. PROTECT IN-PLACE
   a. EXISTING CULVERT
   b. EXISTING POWER POLE, RISER, CABINET
   c. EXISTING FENCE OR RETAINING WALL
   d. EXISTING MONUMENT
   e. EXISTING UNDERGROUND POWER LINE
   f. EXISTING GAS LINE
5. EXISTING UTILITY WORK BY OTHERS
   a. POWER POLE TO BE RELOCATED BY PSE PRIOR TO CONSTRUCTION.
   b. PSE TO DE-ENERGIZE SPAN DURING DETENTION PIPE AND SOLDIER PILE WALL CONSTRUCTION. CONTRACTOR TO COORDINATE WITH PSE FOR TIME FRAME.
   c. COMMUNICATION LINE TO BE RELOCATED BY ZIPLY OR COMCAST DURING CONSTRUCTION.
   d. COMMUNICATION LINE/STRUCTURE TO BE RELOCATED BY ZIPLY OR COMCAST PRIOR TO CONSTRUCTION.
   e. EXISTING COMMUNICATION LINE TO BE ABANDONED IN PLACE.
   f. GAS LINE TO BE RELOCATED PRIOR TO CONSTRUCTION.
6. PROTECT AND ADJUST TO FINISH GRADE
   a. EXISTING GAS VALVE
   b. EXISTING SEWER MANHOLE
   c. EXISTING JUNCTION BOXES
   d. EXISTING WATER VALVE/WATER VALVE MARKERS
   e. EXISTING CATCH BASIN
7. REMOVE EXISTING GUARDRAIL, POSTS, TERMINALS, AND ANCHORS. BACKFILL POSTS AND ANCHORS TO GRADE.
8. RELOCATE EXISTING SIGN. SEE SHEETS 57-66 FOR PROPOSED LOCATION.
9. REMOVE
   a. EXISTING DRAINAGE STRUCTURE
   b. EXISTING CULVERT OR STORM DRAIN

LEGEND

- PERMANENT EASEMENT
- TEMPORARY EASEMENT
- REMOVE/PLUG/TRIM EXISTING CULVERT OR STORM DRAIN PIPE
- HVF — HIGH VISIBILITY FENCE
- HIGH VISIBILITY SILT FENCE
- REMOVE CURB
- STRUCTURE EXCAVATION CLASS B INCLUDING HAUL

GENERAL NOTES:

1. LOCATION OF UTILITIES SHOWN ON PLANS ARE APPROXIMATE. CONTRACTOR TO FIELD VERIFY ALL UTILITY LOCATIONS WITHIN THE PROJECT LIMITS, INCLUDING SERVICE LINES WITHIN PRIVATE PROPERTIES AND DRIVEWAYS.
2. PRESERVE AND PROTECT ANY EXISTING FEATURES TO REMAIN WITHIN THE PROJECT LIMITS.
3. ADJUST ALL SURFACE UTILITIES AND MONUMENTS WITHIN THE PAVING AREA TO GRADE AFTER OVERLAY. FOR OVERLAY LIMITS SEE SHEETS 46-55.
4. CONTRACTOR TO NOTIFY PROPERTY OWNER(S) TWO (2) WEEKS PRIOR TO CONSTRUCTION, TO COORDINATE DRIVEWAY ACCESS. DRIVEWAY INGRESS/EGRESS MUST BE MAINTAINED AT ALL TIMES UNLESS OTHERWISE AGREED TO BY THE PROPERTY OWNER.
5. DISTURBANCE AND CLEARING LIMITS SHALL BE MINIMIZED TO THE AREA NECESSARY FOR INSTALLATION OF TEMPORARY AND PERMANENT ELEMENTS. ONLY REMOVE THE MINIMUM VEGETATION NEEDED FOR CONSTRUCTION ACTIVITIES. CLEARING LIMITS SHALL BE DELINEATED USING A HVF AND GENERALLY MATCH THE ROW AND TCE LIMITS, UNLESS OTHERWISE SHOWN IN SHEETS 7-16.
6. PROTECT EXISTING TREE WITHIN THE WORK AREA, UNLESS SHOWN AS TO BE REMOVED IN SHEETS 7-16 AND WITHIN 5 FEET FROM THE WORK LIMITS IN ACCORDANCE WITH SHEET 17 DETAIL 1 OR 2 AS FEASIBLE TO PERFORM WORK.
7. INLET PROTECTION MEASURES MUST BE INSTALLED ON PROPOSED STORM DRAINAGE STRUCTURES WHICH RECEIVE CONSTRUCTION STORMWATER RUNOFF.
8. SEE APPENDIX X OF PROJECT'S SPECIAL PROVISIONS FOR WORK (SITE PREPARATION AND PROPOSED CONDITION) RELATED TO THE WATER LINE, HYDRANTS, AND METERS/VALVES FROM STA 13+50 TO STA 45+50. THE EXISTING AC WATER MAIN WILL BE ABANDONED IN PLACE WITHIN THESE LIMITS AND ONLY BE REMOVED AT LOCATIONS WHERE IT IS CONFLICTING WITH THE PROPOSED WORK.
9. FOR ROADWAY EXCAVATION INCLUDING HAUL, SEE SHEET 44 AND DETAIL 3 SHEET 17.
10. OVERHEAD COMMUNICATION WIRES WILL BE RAISED APPROX. 20 FT FROM EXISTING GROUND AND SLACK REMOVED.

EROSION CONTROL NOTES:

1. INSTALL HIGH VISIBILITY FENCE/HIGH VISIBILITY SILT FENCE PER WSDOT STANDARD PLAN I-10.10/I-30.17.
2. INSTALL STORM DRAIN INLET PROTECTION PER WSDOT STANDARD PLAN I-40.20.
3. REDIRECT RUNOFF FROM WORK ZONE ALONG ROADWAY SUPER ELEVATION.

SITE PREPARATION NOTES:

1. REMOVAL OF STRUCTURES AND OBSTRUCTIONS
   a. REMOVE EXISTING CONCRETE BARRIER (FULL LENGTH) AT THIS VICINITY.
   b. REMOVE AND RESET SOLAR LIGHTS WITHIN DRIVEWAYS.
   c. REMOVE BOLLARD.
   d. REMOVE TIMBER LANDSCAPING WALL.
   e. REMOVE AND RELOCATE MAILBOX. SEE SHEET 53 FOR NEW LOCATION.
   f. REMOVE EXISTING FENCE.
   g. REMOVE AND RESET EXISTING FENCE.
   h. REMOVE AND RESET EXISTING LANDSCAPE BLOCKS.
   i. REMOVE EXISTING CONCRETE CURB
   j. REMOVE EXISTING CONCRETE UTILITY VAULT
2. PLUG EXISTING PIPE.
3. TRIM EXISTING PIPE TO LENGTH FOR CONNECTION TO DRAINAGE STRUCTURE. SEE SHEETS 18-27.
4. PROTECT IN-PLACE
   a. EXISTING CULVERT
   b. EXISTING POWER POLE, RISER, CABINET
   c. EXISTING FENCE OR RETAINING WALL
   d. EXISTING MONUMENT
   e. EXISTING UNDERGROUND POWER LINE
   f. EXISTING GAS LINE
5. EXISTING UTILITY WORK BY OTHERS
   a. POWER POLE TO BE RELOCATED BY PSE PRIOR TO CONSTRUCTION.
   b. PSE TO DE-ENERGIZE SPAN DURING DETENTION PIPE AND SOLDIER PILE WALL CONSTRUCTION. CONTRACTOR TO COORDINATE WITH PSE FOR TIME FRAME.
   c. COMMUNICATION LINE TO BE RELOCATED BY ZIPLY OR COMCAST DURING CONSTRUCTION.
   d. COMMUNICATION LINE/STRUCTURE TO BE RELOCATED BY ZIPLY OR COMCAST PRIOR TO CONSTRUCTION.
   e. EXISTING COMMUNICATION LINE TO BE ABANDONED IN PLACE.
   f. GAS LINE TO BE RELOCATED PRIOR TO CONSTRUCTION.
6. PROTECT AND ADJUST TO FINISH GRADE
   a. EXISTING GAS VALVE
   b. EXISTING SEWER MANHOLE
   c. EXISTING JUNCTION BOXES
   d. EXISTING WATER VALVE/WATER VALVE MARKERS
   e. EXISTING CATCH BASIN
7. REMOVE EXISTING GUARDRAIL, POSTS, TERMINALS, AND ANCHORS. BACKFILL POSTS AND ANCHORS TO GRADE.
8. RELOCATE EXISTING SIGN. SEE SHEETS 57-66 FOR PROPOSED LOCATION.
9. REMOVE
   a. EXISTING DRAINAGE STRUCTURE
   b. EXISTING CULVERT OR STORM DRAIN

Potential Monitoring Location

GENERAL NOTES:

1. LOCATION OF UTILITIES SHOWN ON PLANS ARE APPROXIMATE. CONTRACTOR TO FIELD VERIFY ALL UTILITY LOCATIONS WITHIN THE PROJECT LIMITS, INCLUDING SERVICE LINES WITHIN PRIVATE PROPERTIES AND DRIVEWAYS.
2. PRESERVE AND PROTECT ANY EXISTING FEATURES TO REMAIN WITHIN THE PROJECT LIMITS.
3. ADJUST ALL SURFACE UTILITIES AND MONUMENTS WITHIN THE PAVING AREA TO GRADE AFTER OVERLAY. FOR OVERLAY LIMITS SEE SHEETS 46-55.
4. CONTRACTOR TO NOTIFY PROPERTY OWNER(S) TWO (2) WEEKS PRIOR TO CONSTRUCTION, TO COORDINATE DRIVEWAY ACCESS. DRIVEWAY INGRESS/EGRESS MUST BE MAINTAINED AT ALL TIMES UNLESS OTHERWISE AGREED TO BY THE PROPERTY OWNER.
5. DISTURBANCE AND CLEARING LIMITS SHALL BE MINIMIZED TO THE AREA NECESSARY FOR INSTALLATION OF TEMPORARY AND PERMANENT ELEMENTS. ONLY REMOVE THE MINIMUM VEGETATION NEEDED FOR CONSTRUCTION ACTIVITIES. CLEARING LIMITS SHALL BE DELINEATED USING A HVF AND GENERALLY MATCH THE ROW AND TCE LIMITS, UNLESS OTHERWISE SHOWN IN SHEETS 7-16.
6. PROTECT EXISTING TREE WITHIN THE WORK AREA, UNLESS SHOWN AS TO BE REMOVED IN SHEETS 7-16 AND WITHIN 5 FEET FROM THE WORK LIMITS IN ACCORDANCE WITH SHEET 17 DETAIL 1 OR 2 AS FEASIBLE TO PERFORM WORK.
7. INLET PROTECTION MEASURES MUST BE INSTALLED ON PROPOSED STORM DRAINAGE STRUCTURES WHICH RECEIVE CONSTRUCTION STORMWATER RUNOFF.
8. SEE APPENDIX X OF PROJECT'S SPECIAL PROVISIONS FOR WORK (SITE PREPARATION AND PROPOSED CONDITION) RELATED TO THE WATER LINE, HYDRANTS, AND METERS/VALVES FROM STA 13+50 TO STA 45+50. THE EXISTING AC WATER MAIN WILL BE ABANDONED IN PLACE WITHIN THESE LIMITS AND ONLY BE REMOVED AT LOCATIONS WHERE IT IS CONFLICTING WITH THE PROPOSED WORK.
9. FOR ROADWAY EXCAVATION INCLUDING HAUL, SEE SHEET 44 AND DETAIL 3 SHEET 17.
10. OVERHEAD COMMUNICATION WIRES WILL BE RAISED APPROX. 20 FT FROM EXISTING GROUND AND SLACK REMOVED.

EROSION CONTROL NOTES:

1. INSTALL HIGH VISIBILITY FENCE/HIGH VISIBILITY SILT FENCE PER WSDOT STANDARD PLAN I-10.10/I-30.17.
2. INSTALL STORM DRAIN INLET PROTECTION PER WSDOT STANDARD PLAN I-40.20.
3. REDIRECT RUNOFF FROM WORK ZONE ALONG ROADWAY SUPER ELEVATION.

SITE PREPARATION NOTES:

1. REMOVAL OF STRUCTURES AND OBSTRUCTIONS
   a. REMOVE EXISTING CONCRETE BARRIER (FULL LENGTH) AT THIS VICINITY.
   b. REMOVE AND RESET SOLAR LIGHTS WITHIN DRIVEWAYS.
   c. REMOVE BOLLARD.
   d. REMOVE TIMBER LANDSCAPING WALL.
   e. REMOVE AND RELOCATE MAILBOX. SEE SHEET 53 FOR NEW LOCATION.
   f. REMOVE EXISTING FENCE.
   g. REMOVE AND RESET EXISTING FENCE.
   h. REMOVE AND RESET EXISTING LANDSCAPE BLOCKS.
   i. REMOVE EXISTING CONCRETE CURB
   j. REMOVE EXISTING CONCRETE UTILITY VAULT
2. PLUG EXISTING PIPE.
3. TRIM EXISTING PIPE TO LENGTH FOR CONNECTION TO DRAINAGE STRUCTURE. SEE SHEETS 18-27.
4. PROTECT IN-PLACE
   a. EXISTING CULVERT
   b. EXISTING POWER POLE, RISER, CABINET
   c. EXISTING FENCE OR RETAINING WALL
   d. EXISTING MONUMENT
   e. EXISTING UNDERGROUND POWER LINE
   f. EXISTING GAS LINE
5. EXISTING UTILITY WORK BY OTHERS
   a. POWER POLE TO BE RELOCATED BY PSE PRIOR TO CONSTRUCTION.
   b. PSE TO DE-ENERGIZE SPAN DURING DETENTION PIPE AND SOLDIER PILE WALL CONSTRUCTION. CONTRACTOR TO COORDINATE WITH PSE FOR TIME FRAME.
   c. COMMUNICATION LINE TO BE RELOCATED BY ZIPLY OR COMCAST DURING CONSTRUCTION.
   d. COMMUNICATION LINE/STRUCTURE TO BE RELOCATED BY ZIPLY OR COMCAST PRIOR TO CONSTRUCTION.
   e. EXISTING COMMUNICATION LINE TO BE ABANDONED IN PLACE.
   f. GAS LINE TO BE RELOCATED PRIOR TO CONSTRUCTION.
6. PROTECT AND ADJUST TO FINISH GRADE
   a. EXISTING GAS VALVE
   b. EXISTING SEWER MANHOLE
   c. EXISTING JUNCTION BOXES
   d. EXISTING WATER VALVE/WATER VALVE MARKERS
   e. EXISTING CATCH BASIN
7. REMOVE EXISTING GUARDRAIL, POSTS, TERMINALS, AND ANCHORS. BACKFILL POSTS AND ANCHORS TO GRADE.
8. RELOCATE EXISTING SIGN. SEE SHEETS 57-66 FOR PROPOSED LOCATION.
9. REMOVE
   a. EXISTING DRAINAGE STRUCTURE
   b. EXISTING CULVERT OR STORM DRAIN

Potential Monitoring Location

GENERAL NOTES:

1. LOCATION OF UTILITIES SHOWN ON PLANS ARE APPROXIMATE. CONTRACTOR TO FIELD VERIFY ALL UTILITY LOCATIONS WITHIN THE PROJECT LIMITS, INCLUDING SERVICE LINES WITHIN PRIVATE PROPERTIES AND DRIVEWAYS.
2. PRESERVE AND PROTECT ANY EXISTING FEATURES TO REMAIN WITHIN THE PROJECT LIMITS.
3. ADJUST ALL SURFACE UTILITIES AND MONUMENTS WITHIN THE PAVING AREA TO GRADE AFTER OVERLAY. FOR OVERLAY LIMITS SEE SHEETS 46-55.
4. CONTRACTOR TO NOTIFY PROPERTY OWNER(S) TWO (2) WEEKS PRIOR TO CONSTRUCTION, TO COORDINATE DRIVEWAY ACCESS. DRIVEWAY INGRESS/EGRESS MUST BE MAINTAINED AT ALL TIMES UNLESS OTHERWISE AGREED TO BY THE PROPERTY OWNER.
5. DISTURBANCE AND CLEARING LIMITS SHALL BE MINIMIZED TO THE AREA NECESSARY FOR INSTALLATION OF TEMPORARY AND PERMANENT ELEMENTS. ONLY REMOVE THE MINIMUM VEGETATION NEEDED FOR CONSTRUCTION ACTIVITIES. CLEARING LIMITS SHALL BE DELINEATED USING A HVF AND GENERALLY MATCH THE ROW AND TCE LIMITS, UNLESS OTHERWISE SHOWN IN SHEETS 7-16.
6. PROTECT EXISTING TREE WITHIN THE WORK AREA, UNLESS SHOWN AS TO BE REMOVED IN SHEETS 7-16 AND WITHIN 5 FEET FROM THE WORK LIMITS IN ACCORDANCE WITH SHEET 17 DETAIL 1 OR 2 AS FEASIBLE TO PERFORM WORK.
7. INLET PROTECTION MEASURES MUST BE INSTALLED ON PROPOSED STORM DRAINAGE STRUCTURES WHICH RECEIVE CONSTRUCTION STORMWATER RUNOFF.
8. SEE APPENDIX X OF PROJECT'S SPECIAL PROVISIONS FOR WORK (SITE PREPARATION AND PROPOSED CONDITION) RELATED TO THE WATER LINE, HYDRANTS, AND METERS/VALVES FROM STA 13+50 TO STA 45+50. THE EXISTING AC WATER MAIN WILL BE ABANDONED IN PLACE WITHIN THESE LIMITS AND ONLY BE REMOVED AT LOCATIONS WHERE IT IS CONFLICTING WITH THE PROPOSED WORK.
9. FOR ROADWAY EXCAVATION INCLUDING HAUL, SEE SHEET 44 AND DETAIL 3 SHEET 17.
10. OVERHEAD COMMUNICATION WIRES WILL BE RAISED APPROX. 20 FT FROM EXISTING GROUND AND SLACK REMOVED.

EROSION CONTROL NOTES:

1. INSTALL HIGH VISIBILITY FENCE/HIGH VISIBILITY SILT FENCE PER WSDOT STANDARD PLAN I-10.10/I-30.17.
2. INSTALL STORM DRAIN INLET PROTECTION PER WSDOT STANDARD PLAN I-40.20.
3. REDIRECT RUNOFF FROM WORK ZONE ALONG ROADWAY SUPER ELEVATION.

SITE PREPARATION NOTES:

1. REMOVAL OF STRUCTURES AND OBSTRUCTIONS
   a. REMOVE EXISTING CONCRETE BARRIER (FULL LENGTH) AT THIS VICINITY.
   b. REMOVE AND RESET SOLAR LIGHTS WITHIN DRIVEWAYS.
   c. REMOVE BOLLARD.
   d. REMOVE TIMBER LANDSCAPING WALL.
   e. REMOVE AND RELOCATE MAILBOX. SEE SHEET 53 FOR NEW LOCATION.
   f. REMOVE EXISTING FENCE.
   g. REMOVE AND RESET EXISTING FENCE.
   h. REMOVE AND RESET EXISTING LANDSCAPE BLOCKS.
   i. REMOVE EXISTING CONCRETE CURB
   j. REMOVE EXISTING CONCRETE UTILITY VAULT
2. PLUG EXISTING PIPE.
3. TRIM EXISTING PIPE TO LENGTH FOR CONNECTION TO DRAINAGE STRUCTURE. SEE SHEETS 18-27.
4. PROTECT IN-PLACE
   a. EXISTING CULVERT
   b. EXISTING POWER POLE, RISER, CABINET
   c. EXISTING FENCE OR RETAINING WALL
   d. EXISTING MONUMENT
   e. EXISTING UNDERGROUND POWER LINE
   f. EXISTING GAS LINE
5. EXISTING UTILITY WORK BY OTHERS
   a. POWER POLE TO BE RELOCATED BY PSE PRIOR TO CONSTRUCTION.
   b. PSE TO DE-ENERGIZE SPAN DURING DETENTION PIPE AND SOLDIER PILE WALL CONSTRUCTION. CONTRACTOR TO COORDINATE WITH PSE FOR TIME FRAME.
   c. COMMUNICATION LINE TO BE RELOCATED BY ZIPLY OR COMCAST DURING CONSTRUCTION.
   d. COMMUNICATION LINE/STRUCTURE TO BE RELOCATED BY ZIPLY OR COMCAST PRIOR TO CONSTRUCTION.
   e. EXISTING COMMUNICATION LINE TO BE ABANDONED IN PLACE.
   f. GAS LINE TO BE RELOCATED PRIOR TO CONSTRUCTION.
6. PROTECT AND ADJUST TO FINISH GRADE
   a. EXISTING GAS VALVE
   b. EXISTING SEWER MANHOLE
   c. EXISTING JUNCTION BOXES
   d. EXISTING WATER VALVE/WATER VALVE MARKERS
   e. EXISTING CATCH BASIN
7. REMOVE EXISTING GUARDRAIL, POSTS, TERMINALS, AND ANCHORS. BACKFILL POSTS AND ANCHORS TO GRADE.
8. RELOCATE EXISTING SIGN. SEE SHEETS 57-66 FOR PROPOSED LOCATION.
9. REMOVE
   a. EXISTING DRAINAGE STRUCTURE
   b. EXISTING CULVERT OR STORM DRAIN

1. INSTALL HIGH VISIBILITY FENCE/HIGH VISIBILITY SILT FENCE PER WSDOT STANDARD PLAN I-10.10/I-30.17.
2. INSTALL STORM DRAIN INLET PROTECTION PER WSDOT STANDARD PLAN I-40.20.
3. REDIRECT RUNOFF FROM WORK ZONE ALONG ROADWAY SUPER ELEVATION.

SITE PREPARATION NOTES:

1. REMOVAL OF STRUCTURES AND OBSTRUCTIONS
   a. REMOVE EXISTING CONCRETE BARRIER (FULL LENGTH) AT THIS VICINITY.
   b. REMOVE AND RESET SOLAR LIGHTS WITHIN DRIVEWAYS.
   c. REMOVE BOLLARD.
   d. REMOVE TIMBER LANDSCAPING WALL.
   e. REMOVE AND RELOCATE MAILBOX. SEE SHEET 53 FOR NEW LOCATION.
   f. REMOVE EXISTING FENCE.
   g. REMOVE AND RESET EXISTING FENCE.
   h. REMOVE AND RESET EXISTING LANDSCAPE BLOCKS.
   i. REMOVE EXISTING CONCRETE CURB
   j. REMOVE EXISTING CONCRETE UTILITY VAULT
2. PLUG EXISTING PIPE.
3. TRIM EXISTING PIPE TO LENGTH FOR CONNECTION TO DRAINAGE STRUCTURE. SEE SHEETS 18-27.
4. PROTECT IN-PLACE
   a. EXISTING CULVERT
   b. EXISTING POWER POLE, RISER, CABINET
   c. EXISTING FENCE OR RETAINING WALL
   d. EXISTING MONUMENT
   e. EXISTING UNDERGROUND POWER LINE
   f. EXISTING GAS LINE
5. EXISTING UTILITY WORK BY OTHERS
   a. POWER POLE TO BE RELOCATED BY PSE PRIOR TO CONSTRUCTION.
   b. PSE TO DE-ENERGIZE SPAN DURING DETENTION PIPE AND SOLDIER PILE WALL CONSTRUCTION. CONTRACTOR TO COORDINATE WITH PSE FOR TIME FRAME.
   c. COMMUNICATION LINE TO BE RELOCATED BY ZIPLY OR COMCAST DURING CONSTRUCTION.
   d. COMMUNICATION LINE/STRUCTURE TO BE RELOCATED BY ZIPLY OR COMCAST PRIOR TO CONSTRUCTION.
   e. EXISTING COMMUNICATION LINE TO BE ABANDONED IN PLACE.
   f. GAS LINE TO BE RELOCATED PRIOR TO CONSTRUCTION.
6. PROTECT AND ADJUST TO FINISH GRADE
   a. EXISTING GAS VALVE
   b. EXISTING SEWER MANHOLE
   c. EXISTING JUNCTION BOXES
   d. EXISTING WATER VALVE/WATER VALVE MARKERS
   e. EXISTING CATCH BASIN
7. REMOVE EXISTING GUARDRAIL, POSTS, TERMINALS, AND ANCHORS. BACKFILL POSTS AND ANCHORS TO GRADE.
8. RELOCATE EXISTING SIGN. SEE SHEETS 57-66 FOR PROPOSED LOCATION.
9. REMOVE
   a. EXISTING DRAINAGE STRUCTURE
   b. EXISTING CULVERT OR STORM DRAIN

LEGEND

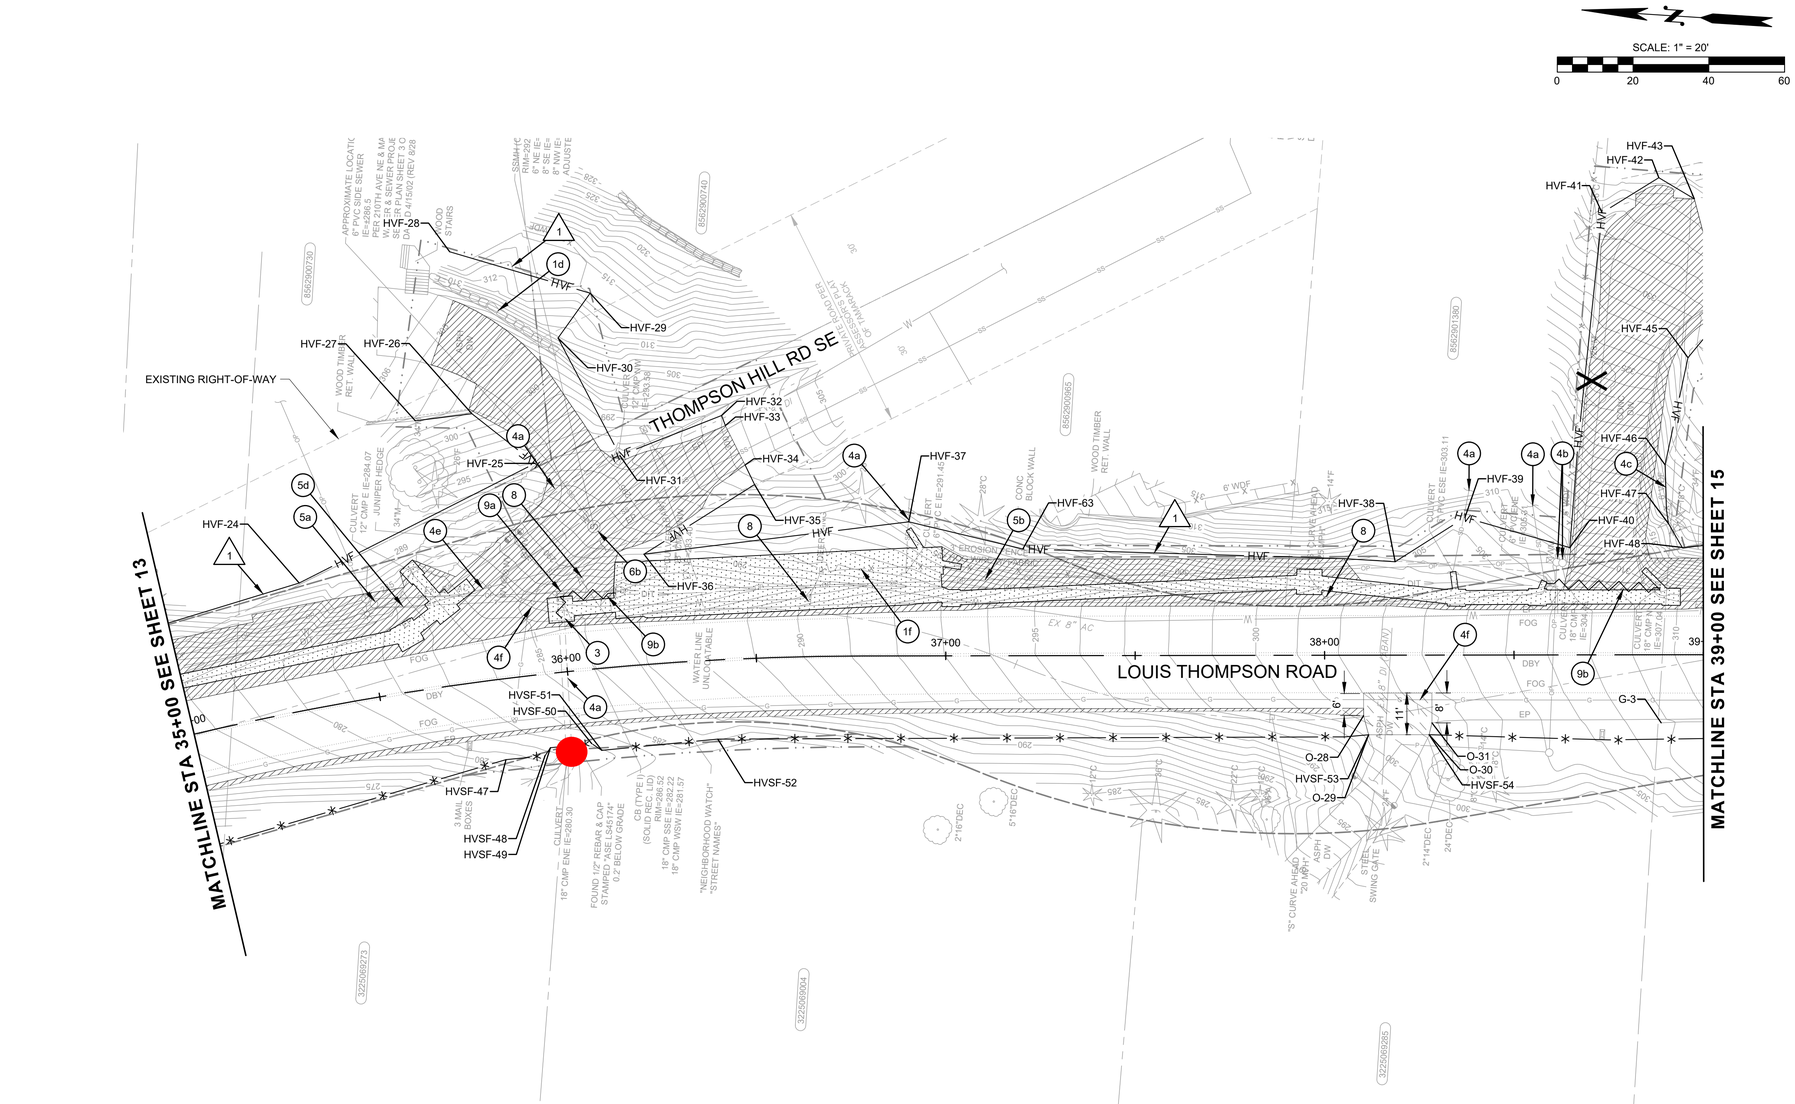
PLOT TIME: 1/24/2024 2:33 PM
USER NAME: ALEKSANDRA SLATALA

SEC. 32, T. 25N, R. 6E, W.M.



GENERAL NOTES:

1. LOCATION OF UTILITIES SHOWN ON PLANS ARE APPROXIMATE. CONTRACTOR TO FIELD VERIFY ALL UTILITY LOCATIONS WITHIN THE PROJECT LIMITS, INCLUDING SERVICE LINES WITHIN PRIVATE PROPERTIES AND DRIVEWAYS.
2. PRESERVE AND PROTECT ANY EXISTING FEATURES TO REMAIN WITHIN THE PROJECT LIMITS.
3. ADJUST ALL SURFACE UTILITIES AND MONUMENTS WITHIN THE PAVING AREA TO GRADE AFTER OVERLAY. FOR OVERLAY LIMITS SEE SHEETS 46-55.
4. CONTRACTOR TO NOTIFY PROPERTY OWNER(S) TWO (2) WEEKS PRIOR TO CONSTRUCTION, TO COORDINATE DRIVEWAY ACCESS. DRIVEWAY INGRESS/EGRESS MUST BE MAINTAINED AT ALL TIMES UNLESS OTHERWISE AGREED TO BY THE PROPERTY OWNER.
5. DISTURBANCE AND CLEARING LIMITS SHALL BE MINIMIZED TO THE AREA NECESSARY FOR INSTALLATION OF TEMPORARY AND PERMANENT ELEMENTS. ONLY REMOVE THE MINIMUM VEGETATION NEEDED FOR CONSTRUCTION ACTIVITIES. CLEARING LIMITS SHALL BE DELINEATED USING A HVF AND GENERALLY MATCH THE ROW AND TCE LIMITS, UNLESS OTHERWISE SHOWN IN SHEETS 7-16.
6. PROTECT EXISTING TREE WITHIN THE WORK AREA, UNLESS SHOWN AS TO BE REMOVED IN SHEETS 7-16 AND WITHIN 5 FEET FROM THE WORK LIMITS IN ACCORDANCE WITH SHEET 17 DETAIL 1 OR 2 AS FEASIBLE TO PERFORM WORK.
7. INLET PROTECTION MEASURES MUST BE INSTALLED ON PROPOSED STORM DRAINAGE STRUCTURES WHICH RECEIVE CONSTRUCTION STORMWATER RUNOFF.
8. SEE APPENDIX X OF PROJECT'S SPECIAL PROVISIONS FOR WORK (SITE PREPARATION AND PROPOSED CONDITION) RELATED TO THE WATER LINE, HYDRANTS, AND METERS/VALVES FROM STA 13+50 TO STA 45+50. THE EXISTING AC WATER MAIN WILL BE ABANDONED IN PLACE WITHIN THESE LIMITS AND ONLY BE REMOVED AT LOCATIONS WHERE IT IS CONFLICTING WITH THE PROPOSED WORK.
9. FOR ROADWAY EXCAVATION INCLUDING HAUL, SEE SHEET 44 AND DETAIL 3 SHEET 17.
10. OVERHEAD COMMUNICATION WIRES WILL BE RAISED APPROX. 20 FT FROM EXISTING GROUND AND SLACK REMOVED.

EROSION CONTROL NOTES:

1. INSTALL HIGH VISIBILITY FENCE/HIGH VISIBILITY SILT FENCE PER WSDOT STANDARD PLAN I-10.10/I-30.17.
2. INSTALL STORM DRAIN INLET PROTECTION PER WSDOT STANDARD PLAN I-40.20.
3. REDIRECT RUNOFF FROM WORK ZONE ALONG ROADWAY SUPER ELEVATION.

(##) SITE PREPARATION NOTES:

1. REMOVAL OF STRUCTURES AND OBSTRUCTIONS
   a. REMOVE EXISTING CONCRETE BARRIER (FULL LENGTH) AT THIS VICINITY.
   b. REMOVE AND RESET SOLAR LIGHTS WITHIN DRIVEWAYS.
   c. REMOVE BOLLARD.
   d. REMOVE TIMBER LANDSCAPING WALL.
   e. REMOVE AND RELOCATE MAILBOX. SEE SHEET 53 FOR NEW LOCATION.
   f. REMOVE EXISTING FENCE.
   g. REMOVE AND RESET EXISTING FENCE.
   h. REMOVE AND RESET EXISTING LANDSCAPE BLOCKS.
   i. REMOVE EXISTING CONCRETE CURB
   j. REMOVE EXISTING CONCRETE UTILITY VAULT
2. PLUG EXISTING PIPE.
3. TRIM EXISTING PIPE TO LENGTH FOR CONNECTION TO DRAINAGE STRUCTURE. SEE SHEETS 18-27.
4. PROTECT IN-PLACE
   a. EXISTING CULVERT
   b. EXISTING POWER POLE, RISER, CABINET
   c. EXISTING FENCE OR RETAINING WALL
   d. EXISTING MONUMENT
   e. EXISTING UNDERGROUND POWER LINE
   f. EXISTING GAS LINE
5. EXISTING UTILITY WORK BY OTHERS
   a. POWER POLE TO BE RELOCATED BY PSE PRIOR TO CONSTRUCTION.
   b. PSE TO DE-ENERGIZE SPAN DURING DETENTION PIPE AND SOLDIER PILE WALL CONSTRUCTION. CONTRACTOR TO COORDINATE WITH PSE FOR TIME FRAME.
   c. COMMUNICATION LINE TO BE RELOCATED BY ZIPLY OR COMCAST DURING CONSTRUCTION.
   d. COMMUNICATION LINE/STRUCTURE TO BE RELOCATED BY ZIPLY OR COMCAST PRIOR TO CONSTRUCTION.
   e. EXISTING COMMUNICATION LINE TO BE ABANDONED IN PLACE.
   f. GAS LINE TO BE RELOCATED PRIOR TO CONSTRUCTION.
6. PROTECT AND ADJUST TO FINISH GRADE
   a. EXISTING GAS VALVE
   b. EXISTING SEWER MANHOLE
   c. EXISTING JUNCTION BOXES
   d. EXISTING WATER VALVE/WATER VALVE MARKERS
   e. EXISTING CATCH BASIN
7. REMOVE EXISTING GUARDRAIL, POSTS, TERMINALS, AND ANCHORS. BACKFILL POSTS AND ANCHORS TO GRADE.
8. RELOCATE EXISTING SIGN. SEE SHEETS 57-66 FOR PROPOSED LOCATION.
9. REMOVE
   a. EXISTING DRAINAGE STRUCTURE
   b. EXISTING CULVERT OR STORM DRAIN

GENERAL NOTES:

1. LOCATION OF UTILITIES SHOWN ON PLANS ARE APPROXIMATE. CONTRACTOR TO FIELD VERIFY ALL UTILITY LOCATIONS WITHIN THE PROJECT LIMITS, INCLUDING SERVICE LINES WITHIN PRIVATE PROPERTIES AND DRIVEWAYS.
2. PRESERVE AND PROTECT ANY EXISTING FEATURES TO REMAIN WITHIN THE PROJECT LIMITS.
3. ADJUST ALL SURFACE UTILITIES AND MONUMENTS WITHIN THE PAVING AREA TO GRADE AFTER OVERLAY. FOR OVERLAY LIMITS SEE SHEETS 46-55.
4. CONTRACTOR TO NOTIFY PROPERTY OWNER(S) TWO (2) WEEKS PRIOR TO CONSTRUCTION, TO COORDINATE DRIVEWAY ACCESS. DRIVEWAY INGRESS/EGRESS MUST BE MAINTAINED AT ALL TIMES UNLESS OTHERWISE AGREED TO BY THE PROPERTY OWNER.
5. DISTURBANCE AND CLEARING LIMITS SHALL BE MINIMIZED TO THE AREA NECESSARY FOR INSTALLATION OF TEMPORARY AND PERMANENT ELEMENTS. ONLY REMOVE THE MINIMUM VEGETATION NEEDED FOR CONSTRUCTION ACTIVITIES. CLEARING LIMITS SHALL BE DELINEATED USING A HVF AND GENERALLY MATCH THE ROW AND TCE LIMITS, UNLESS OTHERWISE SHOWN IN SHEETS 7-16.
6. PROTECT EXISTING TREE WITHIN THE WORK AREA, UNLESS SHOWN AS TO BE REMOVED IN SHEETS 7-16 AND WITHIN 5 FEET FROM THE WORK LIMITS IN ACCORDANCE WITH SHEET 17 DETAIL 1 OR 2 AS FEASIBLE TO PERFORM WORK.
7. INLET PROTECTION MEASURES MUST BE INSTALLED ON PROPOSED STORM DRAINAGE STRUCTURES WHICH RECEIVE CONSTRUCTION STORMWATER RUNOFF.
8. SEE APPENDIX X OF PROJECT'S SPECIAL PROVISIONS FOR WORK (SITE PREPARATION AND PROPOSED CONDITION) RELATED TO THE WATER LINE, HYDRANTS, AND METERS/VALVES FROM STA 13+50 TO STA 45+50. THE EXISTING AC WATER MAIN WILL BE ABANDONED IN PLACE WITHIN THESE LIMITS AND ONLY BE REMOVED AT LOCATIONS WHERE IT IS CONFLICTING WITH THE PROPOSED WORK.
9. FOR ROADWAY EXCAVATION INCLUDING HAUL, SEE SHEET 44 AND DETAIL 3 SHEET 17.
10. OVERHEAD COMMUNICATION WIRES WILL BE RAISED APPROX. 20 FT FROM EXISTING GROUND AND SLACK REMOVED.

EROSION CONTROL NOTES:

1. INSTALL HIGH VISIBILITY FENCE/HIGH VISIBILITY SILT FENCE PER WSDOT STANDARD PLAN I-10.10/I-30.17.
2. INSTALL STORM DRAIN INLET PROTECTION PER WSDOT STANDARD PLAN I-40.20.
3. REDIRECT RUNOFF FROM WORK ZONE ALONG ROADWAY SUPER ELEVATION.

SITE PREPARATION NOTES:

1. REMOVAL OF STRUCTURES AND OBSTRUCTIONS
   a. REMOVE EXISTING CONCRETE BARRIER (FULL LENGTH) AT THIS VICINITY.
   b. REMOVE AND RESET SOLAR LIGHTS WITHIN DRIVEWAYS.
   c. REMOVE BOLLARD.
   d. REMOVE TIMBER LANDSCAPING WALL.
   e. REMOVE AND RELOCATE MAILBOX. SEE SHEET 53 FOR NEW LOCATION.
   f. REMOVE EXISTING FENCE.
   g. REMOVE AND RESET EXISTING FENCE.
   h. REMOVE AND RESET EXISTING LANDSCAPE BLOCKS.
   i. REMOVE EXISTING CONCRETE CURB
   j. REMOVE EXISTING CONCRETE UTILITY VAULT
2. PLUG EXISTING PIPE.
3. TRIM EXISTING PIPE TO LENGTH FOR CONNECTION TO DRAINAGE STRUCTURE. SEE SHEETS 18-27.
4. PROTECT IN-PLACE
   a. EXISTING CULVERT
   b. EXISTING POWER POLE, RISER, CABINET
   c. EXISTING FENCE OR RETAINING WALL
   d. EXISTING MONUMENT
   e. EXISTING UNDERGROUND POWER LINE
   f. EXISTING GAS LINE
5. EXISTING UTILITY WORK BY OTHERS
   a. POWER POLE TO BE RELOCATED BY PSE PRIOR TO CONSTRUCTION.
   b. PSE TO DE-ENERGIZE SPAN DURING DETENTION PIPE AND SOLDIER PILE WALL CONSTRUCTION. CONTRACTOR TO COORDINATE WITH PSE FOR TIME FRAME.
   c. COMMUNICATION LINE TO BE RELOCATED BY ZIPLY OR COMCAST DURING CONSTRUCTION.
   d. COMMUNICATION LINE/STRUCTURE TO BE RELOCATED BY ZIPLY OR COMCAST PRIOR TO CONSTRUCTION.
   e. EXISTING COMMUNICATION LINE TO BE ABANDONED IN PLACE.
   f. GAS LINE TO BE RELOCATED PRIOR TO CONSTRUCTION.
6. PROTECT AND ADJUST TO FINISH GRADE
   a. EXISTING GAS VALVE
   b. EXISTING SEWER MANHOLE
   c. EXISTING JUNCTION BOXES
   d. EXISTING WATER VALVE/WATER VALVE MARKERS
   e. EXISTING CATCH BASIN
7. REMOVE EXISTING GUARDRAIL, POSTS, TERMINALS, AND ANCHORS. BACKFILL POSTS AND ANCHORS TO GRADE.
8. RELOCATE EXISTING SIGN. SEE SHEETS 57-66 FOR PROPOSED LOCATION.
9. REMOVE
   a. EXISTING DRAINAGE STRUCTURE
   b. EXISTING CULVERT OR STORM DRAIN

PLOT TIME: 1/24/2024 2:33 PM
USER NAME: ALEKSANDRA.SLATALA

APPENDIX B – CORRESPONDENCE

(Not Used)

APPENDIX C – SITE INSPECTION FORM

Construction Stormwater Site Inspection Form

Project Name _____ Permit # _____ Inspection Date _____ Time _____

Name of Certified Erosion Sediment Control Lead (CESCL) or qualified inspector if *less than one acre*
Print Name: _____

Approximate rainfall amount since the last inspection (in inches): _____

Approximate rainfall amount in the last 24 hours (in inches): _____

Current Weather Clear ☐ Cloudy ☐ Mist ☐ Rain ☐ Wind ☐ Fog ☐

A. Type of inspection: Weekly ☐ Post Storm Event ☐ Other ☐

B. Phase of Active Construction (*check all that apply*):

Pre Construction/installation of erosion/sediment controls	☐	Clearing/Demo/Grading	☐	Infrastructure/storm/roads	☐
Concrete pours	☐	Vertical Construction/buildings	☐	Utilities	☐
Offsite improvements	☐	Site temporary stabilized	☐	Final stabilization	☐

C. Questions:

1. Were all areas of construction and discharge points inspected? Yes ___ No ___
2. Did you observe the presence of suspended sediment, turbidity, discoloration, or oil sheen Yes ___ No ___
3. Was a water quality sample taken during inspection? (*refer to permit conditions S4 & S5*) Yes ___ No ___
4. Was there a turbid discharge 250 NTU or greater, or Transparency 6 cm or less?* Yes ___ No ___
5. If yes to #4 was it reported to Ecology? Yes ___ No ___
6. Is pH sampling required? pH range required is 6.5 to 8.5. Yes ___ No ___

If answering yes to a discharge, describe the event. Include when, where, and why it happened; what action was taken, and when.

_____

_____

_____

_____

*If answering yes to # 4 record NTU/Transparency with continual sampling daily until turbidity is 25 NTU or less/ transparency is 33 cm or greater.

Sampling Results: Date: _____

Parameter	Method (circle one)	Result			Other/Note
		NTU	cm	pH	
Turbidity	tube, meter, laboratory				
pH	Paper, kit, meter				

Construction Stormwater Site Inspection Form

D. Check the observed status of all items. Provide "Action Required "details and dates.

Element #	Inspection	BMPs Inspected			BMP needs maintenance	BMP failed	Action required (describe in section F)
		yes	no	n/a			
1 Clearing Limits	Before beginning land disturbing activities are all clearing limits, natural resource areas (streams, wetlands, buffers, trees) protected with barriers or similar BMPs? (high visibility recommended)						
2 Construction Access	Construction access is stabilized with quarry spalls or equivalent BMP to prevent sediment from being tracked onto roads?						
	Sediment tracked onto the road way was cleaned thoroughly at the end of the day or more frequent as necessary.						
3 Control Flow Rates	Are flow control measures installed to control stormwater volumes and velocity during construction and do they protect downstream properties and waterways from erosion?						
	If permanent infiltration ponds are used for flow control during construction, are they protected from siltation?						
4 Sediment Controls	All perimeter sediment controls (e.g. silt fence, wattles, compost socks, berms, etc.) installed, and maintained in accordance with the Stormwater Pollution Prevention Plan (SWPPP).						
	Sediment control BMPs (sediment ponds, traps, filters etc.) have been constructed and functional as the first step of grading.						
	Stormwater runoff from disturbed areas is directed to sediment removal BMP.						
5 Stabilize Soils	Have exposed un-worked soils been stabilized with effective BMP to prevent erosion and sediment deposition?						

Construction Stormwater Site Inspection Form

Element #	Inspection	BMPs Inspected			BMP needs maintenance	BMP failed	Action required (describe in section F)
		yes	no	n/a			
5 Stabilize Soils Cont.	Are stockpiles stabilized from erosion, protected with sediment trapping measures and located away from drain inlet, waterways, and drainage channels?						
	Have soils been stabilized at the end of the shift, before a holiday or weekend if needed based on the weather forecast?						
6 Protect Slopes	Has stormwater and ground water been diverted away from slopes and disturbed areas with interceptor dikes, pipes and or swales?						
	Is off-site storm water managed separately from stormwater generated on the site?						
	Is excavated material placed on uphill side of trenches consistent with safety and space considerations?						
	Have check dams been placed at regular intervals within constructed channels that are cut down a slope?						
7 Drain Inlets	Storm drain inlets made operable during construction are protected.						
	Are existing storm drains within the influence of the project protected?						
8 Stabilize Channel and Outlets	Have all on-site conveyance channels been designed, constructed and stabilized to prevent erosion from expected peak flows?						
	Is stabilization, including armoring material, adequate to prevent erosion of outlets, adjacent stream banks, slopes and downstream conveyance systems?						
9 Control Pollutants	Are waste materials and demolition debris handled and disposed of to prevent contamination of stormwater?						
	Has cover been provided for all chemicals, liquid products, petroleum products, and other material?						
	Has secondary containment been provided capable of containing 110% of the volume?						
	Were contaminated surfaces cleaned immediately after a spill incident?						
	Were BMPs used to prevent contamination of stormwater by a pH modifying sources?						

Construction Stormwater Site Inspection Form

Element #	Inspection	BMPs Inspected			BMP needs maintenance	BMP failed	Action required (describe in section F)
		yes	no	n/a			
9 Cont.	Wheel wash wastewater is handled and disposed of properly.						
10 Control Dewatering	Concrete washout in designated areas. No washout or excess concrete on the ground.						
	Dewatering has been done to an approved source and in compliance with the SWPPP.						
	Were there any clean non turbid dewatering discharges?						
11 Maintain BMP	Are all temporary and permanent erosion and sediment control BMPs maintained to perform as intended?						
12 Manage the Project	Has the project been phased to the maximum degree practicable?						
	Has regular inspection, monitoring and maintenance been performed as required by the permit?						
	Has the SWPPP been updated, implemented and records maintained?						
13 Protect LID	Is all Bioretention and Rain Garden Facilities protected from sedimentation with appropriate BMPs?						
	Is the Bioretention and Rain Garden protected against over compaction of construction equipment and foot traffic to retain its infiltration capabilities?						
	Permeable pavements are clean and free of sediment and sediment laden-water runoff. Muddy construction equipment has not been on the base material or pavement.						
	Have soiled permeable pavements been cleaned of sediments and pass infiltration test as required by stormwater manual methodology?						
	Heavy equipment has been kept off existing soils under LID facilities to retain infiltration rate.						

E. Check all areas that have been inspected. ✔

All in place BMPs ☐ All disturbed soils ☐ All concrete wash out area ☐ All material storage areas ☐
All discharge locations ☐ All equipment storage areas ☐ All construction entrances/exits ☐

F. Elements checked "Action Required" (section D) describe corrective action to be taken. List the element number; be specific on location and work needed. Document, initial, and date when the corrective action has been completed and inspected.

Element #	Description and Location	Action Required	Completion Date	Initials

APPENDIX D – CONSTRUCTION STORMWATER GENERAL PERMIT (CSWGP)

(To Be Included Once the Project Permit is Available)

APPENDIX E – CONTAMINATED SITE INFORMATION

(Not Used)

APPENDIX F – ENGINEERING CALCULATIONS

Project: City of Sammamish Louis Thompson Tightline
OCI Project #: 10-210058
Calculation: Construction Stormwater Volume and Flow Rates

Disturbed Area	10 YEAR DESIGN STORM				
	Construction Work Zone Area (acres)	Peak Flow Rates from MGSFlood (cfs)	Predicted Runoff Volume from SBUH (cu. ft)*	Flow rate based on Volume (gpm)	Required Number of Baker Tanks Based on Predicted Runoff Volume from SBUH*
	Impervious	10-year, 15-min	10-year, 24-hr	10-year, 24-hr	
Zone 1	0.21	0.13	2,126	11	1 Medium
Zone 2	0.18	0.11	1,790	9	1 Medium
Zone 3	0.27	0.17	2,664	14	1 Large
Zone 4	0.49	0.30	4,936	26	1 Large and 1 Medium
Zone 5	0.41	0.25	4,135	22	1 Large and 1 Small
Zone 6	0.25	0.15	2,470	13	1 Medium

*As an alternative, 50% of the volume generated from SBUH could be considered as the required storage for untreated stormwater (WSDOT TESC Manual - Appendix C: CESF bypass system).

Baker Tank Capacity (Typ.)					
Size	Capacity (gallons)	Capacity (cu.ft)	Length (ft)	Width (ft)	Height (ft)
Small	10,000	1,336	25	8	9
Medium	18,100	2,420	43	8	10.5
Large	21,000	2,807	43	8	12

Project: City of Sammamish Louis Thompson Tightline
OCI Project #: 10-210058
Calculation: Proposed Detention Tank Volumes

Notes:
The storage capacities of the proposed detention tanks are listed below. These detention tanks may be used by the Contrator for temporary settling of construction stormwater once constructed provided they are cleaned prior to the end of consturction.

Proposed Detention Tank Volumes					Disturbed Area Zone
Proposed Detention Tank	# of Pipes	Lengths (FT)	Diameter (FT)	Total Volume (CF)	
FC - Culvert 2	2	35	3.5	674	1
FC - Culvert 3	2	70	4	1,760	2
FC - Culvert 4	1	60	5	1,179	3
FC - To Pond	2	115	6	6,504	4,5

Project: City of Sammamish Louis Thompson Tightline
Compute: 10-YR Stormwater Runoff Volume for the Construction Work Zone 1 (SBUH Hydrograph)
Construction Work Area : 0.21 acres

INPUT

Given:

Total Project Area		
A_t=	9,237	ft^2
P_t=	3	inches
d_t=	10	min
T_c=	5	min
w=	0.5	

Pervious Area[1]		Impervious Area[1]		Units
A_p=	0	A_i=	9,237	ft^2
CN_p=	89	CN_i=	98	
S_p=	1.236	S_i=	0.204	inches
$0.2S_p$=	0.247	$0.2S_i$=	0.041	inches

1) Assume all area within the construction work zone area is impervious

Time			Rainfall			Pevious Area		Impervious Area		Total Runoff/Hydrographs		
Time Step No. #	Time (hr)	Time (min)	Rainfall Distri-bution (% of Pt)	Incremental Rainfall (inches)	Accumlated Runoff (inches)	Accumlated Runoff (inches)	Incremental Rainfall (inches)	Accumlated Runoff (inches)	Incremental Rainfall (inches)	Total Project Runoff (inches)	Instant Hydrograph (cfs)	Design Hydrograph (cfs)

Volume:	2126											Max:	0.09
	0.048813												

Project: City of Sammamish Louis Thompson Tightline
Compute: 10-YR Stormwater Runoff Volume for the Construction Work Zone 2 (SBUH Hydrograph)
Construction Work Area : 0.18 acres

INPUT

Given:

Total Project Area		
A_t=	7,776	ft^2
P_t=	3	inches
d_t=	10	min
T_c=	5	min
w=	0.5	

Pervious Area[1]		Impervious Area[1]		Units
A_p=	0	A_i=	7776	ft^2
CN_p=	60	CN_i=	98	
S_p=	6.667	S_i=	0.204	inches
$0.2S_p$=	1.333	$0.2S_i$=	0.041	inches

1) Assume all area within the construction work zone area is impervious

Time			Rainfall			Pevious Area		Impervious Area		Total Runoff/Hydrographs		
Time Step No. #	Time (hr)	Time (min)	Rainfall Distri-bution (% of Pt)	Incremental Rainfall (inches)	Accumlated Runoff (inches)	Accumlated Runoff (inches)	Incremental Rainfall (inches)	Accumlated Runoff (inches)	Incremental Rainfall (inches)	Total Project Runoff (inches)	Instant Hydrograph (cfs)	Design Hydrograph (cfs)

Volume:	1790											Max:	0.08
	0.041092												

Project: City of Sammamish Louis Thompson Tightline
Compute: 10-YR Stormwater Runoff Volume for the Construction Work Zone 3 (SBUH Hydrograph)
Construction Work Area : 0.27 acres

INPUT

Given:

Total Project Area		
A_t=	11,571	ft^2
P_t=	3	inches
d_t=	10	min
T_c=	5	min
w=	0.5	

Pervious Area[1]		Impervious Area[1]		Units
A_p=	0	A_i=	11571	ft^2
CN_p=	60	CN_i=	98	
S_p=	6.667	S_i=	0.204	inches
$0.2S_p$=	1.333	$0.2S_i$=	0.041	inches

1) Assume all area within the construction work zone area is impervious

Time			Rainfall			Pevious Area		Impervious Area		Total Runoff/Hydrographs		
Time Step No. #	Time (hr)	Time (min)	Rainfall Distri-bution (% of Pt)	Incremental Rainfall (inches)	Accumlated Runoff (inches)	Accumlated Runoff (inches)	Incremental Rainfall (inches)	Accumlated Runoff (inches)	Incremental Rainfall (inches)	Total Project Runoff (inches)	Instant Hydrograph (cfs)	Design Hydrograph (cfs)

Volume:	2664											Max:	0.11
	0.061149												

Project: City of Sammamish Louis Thompson Tightline
Compute: 10-YR Stormwater Runoff Volume for the Construction Work Zone 4 (SBUH Hydrograph)
Construction Work Area : 0.49 acres

INPUT

Given:

Total Project Area		
A_t=	21,442	ft^2
P_t=	3	inches
d_t=	10	min
T_c=	5	min
w=	0.5	

Pervious Area[1]		Impervious Area[1]		Units
A_p=	0	A_i=	21442	ft^2
CN_p=	60	CN_i=	98	
S_p=	6.667	S_i=	0.204	inches
$0.2S_p$=	1.333	$0.2S_i$=	0.041	inches

1) Assume all area within the construction work zone area is impervious

Time			Rainfall			Pevious Area		Impervious Area		Total Runoff/Hydrographs		
Time Step No. #	Time (hr)	Time (min)	Rainfall Distri-bution (% of Pt)	Incremental Rainfall (inches)	Accumlated Runoff (inches)	Accumlated Runoff (inches)	Incremental Rainfall (inches)	Accumlated Runoff (inches)	Incremental Rainfall (inches)	Total Project Runoff (inches)	Instant Hydrograph (cfs)	Design Hydrograph (cfs)

Volume:	4936											Max:	0.21
	0.113312												

Project: City of Sammamish Louis Thompson Tightline
Compute: 10-YR Stormwater Runoff Volume for the Construction Work Zone 5 (SBUH Hydrograph)
Construction Work Area : 0.41 acres

INPUT

Given:

Total Project Area		
A_t=	17,964	ft^2
P_t=	3	inches
d_t=	10	min
T_c=	5	min
w=	0.5	

Pervious Area[1]		Impervious Area[1]		Units
A_p=	0	A_i=	17964	ft^2
CN_p=	60	CN_i=	98	
S_p=	6.667	S_i=	0.204	inches
$0.2S_p$=	1.333	$0.2S_i$=	0.041	inches

1) Assume all area within the construction work zone area is impervious

Time			Rainfall			Pevious Area		Impervious Area		Total Runoff/Hydrographs		
Time Step No. #	Time (hr)	Time (min)	Rainfall Distri-bution (% of Pt)	Incremental Rainfall (inches)	Accumlated Runoff (inches)	Accumlated Runoff (inches)	Incremental Rainfall (inches)	Accumlated Runoff (inches)	Incremental Rainfall (inches)	Total Project Runoff (inches)	Instant Hydrograph (cfs)	Design Hydrograph (cfs)

Volume:	4135											Max:	0.18
	0.09493												

Project: City of Sammamish Louis Thompson Tightline
Compute: 10-YR Stormwater Runoff Volume for the Construction Work Zone 6 (SBUH Hydrograph)
Construction Work Area : 0.25 acres

INPUT

Given:

Total Project Area		
A_t=	10,728	ft^2
P_t=	3	inches
d_t=	10	min
T_c=	5	min
w=	0.5	

Pervious Area[1]		Impervious Area[1]		Units
A_p=	0	A_i=	10728	ft^2
CN_p=	60	CN_i=	98	
S_p=	6.667	S_i=	0.204	inches
$0.2S_p$=	1.333	$0.2S_i$=	0.041	inches

1) Assume all area within the construction work zone area is impervious

Time			Rainfall			Pevious Area		Impervious Area		Total Runoff/Hydrographs		
Time Step No. #	Time (hr)	Time (min)	Rainfall Distri-bution (% of Pt)	Incremental Rainfall (inches)	Accumlated Runoff (inches)	Accumlated Runoff (inches)	Incremental Rainfall (inches)	Accumlated Runoff (inches)	Incremental Rainfall (inches)	Total Project Runoff (inches)	Instant Hydrograph (cfs)	Design Hydrograph (cfs)

MGS FLOOD
PROJECT REPORT

Program Version: MGSFlood 4.55
Program License Number: 201010003
Project Simulation Performed on: 01/05/2024 9:50 AM
Report Generation Date: 01/05/2024 9:50 AM

Input File Name: Site-Zone1.fld
Project Name: Louis Thompson Tightline Project
Analysis Title: TESC Volumes - Site Zone 1
Comments: Potential Disturbed Area

PRECIPITATION INPUT

Computational Time Step (Minutes): 15

Extended Precipitation Time Series Selected
Climatic Region Number: 17

Full Period of Record Available used for Routing
Precipitation Station : 96004805 Puget East 48 in_5min 10/01/1939-10/01/2097
Evaporation Station : 961048 Puget East 48 in MAP
Evaporation Scale Factor : 0.750

HSPF Parameter Region Number: 1
HSPF Parameter Region Name : USGS Default

********** Default HSPF Parameters Used (Not Modified by User) **********

********** WATERSHED DEFINITION **********

Predevelopment/Post Development Tributary Area Summary

	Predeveloped	Post Developed
Total Subbasin Area (acres)	0.210	0.210
Area of Links that Include Precip/Evap (acres)	0.000	0.000
Total (acres)	0.210	0.210

----------SCENARIO: PREDEVELOPED
Number of Subbasins: 1

---------- Subbasin : Zone 1 ----------

	-------Area (Acres) --------
Impervious	0.210
Subbasin Total	0.210

----------SCENARIO: POSTDEVELOPED
Number of Subbasins: 1

---------- Subbasin : Zone 1 ----------
-------Area (Acres) --------
Impervious 0.210

Subbasin Total 0.210

Number of Links: 1

**********Groundwater Recharge Summary **********
Recharge is computed as input to Perlnd Groundwater Plus Infiltration in Structures

Total Predeveloped Recharge During Simulation
Model Element Recharge Amount (ac-ft)

Subbasin: Zone 1 0.000
Link: Outfall 0.000

Total: 0.000

Total Post Developed Recharge During Simulation

Model Element	Recharge Amount (ac-ft)
Subbasin: Zone 1	0.000
Link: Outfall	0.000
Total:	0.000

Total Predevelopment Recharge Equals Post Developed
Average Recharge Per Year, (Number of Years= 158)
Predeveloped: 0.000 ac-ft/year, Post Developed: 0.000 ac-ft/year

*************Water Quality Facility Data ***************

----------SCENARIO: PREDEVELOPED

Number of Links: 1

********** Link: Outfall **********

Infiltration/Filtration Statistics----------
Inflow Volume (ac-ft): 116.86
Inflow Volume Including PPT-Evap (ac-ft): 116.86
Total Runoff Infiltrated (ac-ft): 0.00, 0.00%
Total Runoff Filtered (ac-ft): 0.00, 0.00%
Primary Outflow To Downstream System (ac-ft): 116.86
Secondary Outflow To Downstream System (ac-ft): 0.00
Volume Lost to ET (ac-ft): 0.00
Percent Treated (Infiltrated+Filtered+ET)/Total Volume: 0.00%

----------SCENARIO: POSTDEVELOPED

Number of Links: 1

********** Link: Outfall **********

Infiltration/Filtration Statistics----------
Inflow Volume (ac-ft): 116.86
Inflow Volume Including PPT-Evap (ac-ft): 116.86
Total Runoff Infiltrated (ac-ft): 0.00, 0.00%
Total Runoff Filtered (ac-ft): 0.00, 0.00%
Primary Outflow To Downstream System (ac-ft): 116.86
Secondary Outflow To Downstream System (ac-ft): 0.00
Volume Lost to ET (ac-ft): 0.00
Percent Treated (Infiltrated+Filtered+ET)/Total Volume: 0.00%

*************Compliance Point Results ***************

Scenario Predeveloped Compliance Link: Outfall
Scenario Postdeveloped Compliance Link: Outfall

***** Point of Compliance Flow Frequency Data *****

Recurrence Interval Computed Using Gringorten Plotting Position

Predevelopment Runoff		Postdevelopment Runoff	
Tr (Years)	Discharge (cfs)	Tr (Years)	Discharge (cfs)
2-Year	8.338E-02	2-Year	8.338E-02
5-Year	0.109	5-Year	0.109
10-Year	0.129	10-Year	0.129
25-Year	0.152	25-Year	0.152
50-Year	0.185	50-Year	0.185
100-Year	0.216	100-Year	0.216
200-Year	0.224	200-Year	0.224
500-Year	0.234	500-Year	0.234

** Record too Short to Compute Peak Discharge for These Recurrence Intervals

LIST OF FIGURES

LIST OF APPENDICES

1 INTRODUCTION

The purpose of this Operations and Maintenance (O&M) manual is to describe the runoff treatment and flow control Best Management Practices (BMP) proposed on Louis Thompson Road, BMP function, maintenance tasks, and frequency of task. A log of maintenance activities must be retained by the City of Sammamish (City) that indicates the maintenance actions taken.

StormFilter Media Cartridge Filtration Systems by Contech are proposed to treat stormwater runoff within roadway right-of-way (ROW) for improvements required in association with the Louis Thompson Road Tightline Project. Flow control is provided through several detention tanks with flow control structures. Refer to the project's Technical Information Report, for design details associated with the proposed BMPs.

The project will also install catch basins, storm drains, detention tanks, flow control restrictor devices, and swales at the back of the sidewalk that should be maintained per standard City maintenance practices to ensure the facilities are free of sediment and debris and are functioning as designed.

1.1 BACKGROUND AND PROJECT OVERVIEW

The proposed design of the Louis Thompson Road tightline project upgrades the existing ditch and culvert system on Louis Thompson Road to a tightline system that includes a storm sewer pipe and structures for the collection and conveyance of stormwater runoff. The project area in relation to the general vicinity is shown on **Figure 1**. The proposed work extends from 210th Place SE to East Lake Sammamish Parkway NE (approximately 0.67 miles), as shown in **Figure 2**. The existing outfalls within the project site are proposed to be maintained. This project addresses high velocities and erosion within the ditch systems, reduces flooding risk, and mitigates stormwater impacts from the project development. This project is part of the City's commitment to protecting Zackuse Creek and Lake Sammamish and is listed as a high-priority capital improvement project in the Final Zackuse Creek Basin Plan.

The runoff treatment facilities proposed are StormFilter Media Cartridge Filtration Systems by Contech. The filter media is proposed to consist of Zeolite-Perlite-Granular Activated Carbon (ZPG), as approved by the 2021 King County Surface Water Design Manual. The StormFilter facilities are an underground biofiltration system providing high percentage pollutant removal of TSS. StormFilter is approved for General Use Level Designation (GULD) for basic treatment. The facilities work by percolating stormwater through media-filled cartridges, which trap particulates and remove pollutants such a dissolved metals, nutrients, and hydrocarbons. The treatment process also filters out surface scum and floating oil and grease. The stormwater released from the cartridges discharges to the downstream stormwater pipe system. The StormFilter facilities have limited high flow bypass capabilities, so an external bypass via an upstream flow splitter structure is proposed where the flows to the facility exceed the maximum flow.

The flow control facilities are corrugated metal pipe detention tanks, provided as a single tank, or in series at various locations downstream of the water quality facilities.

1.2 PROJECT VICINITY AND SITE

This section includes the project vicinity map and the project site map.

Figure 1. Project Vicinity Map

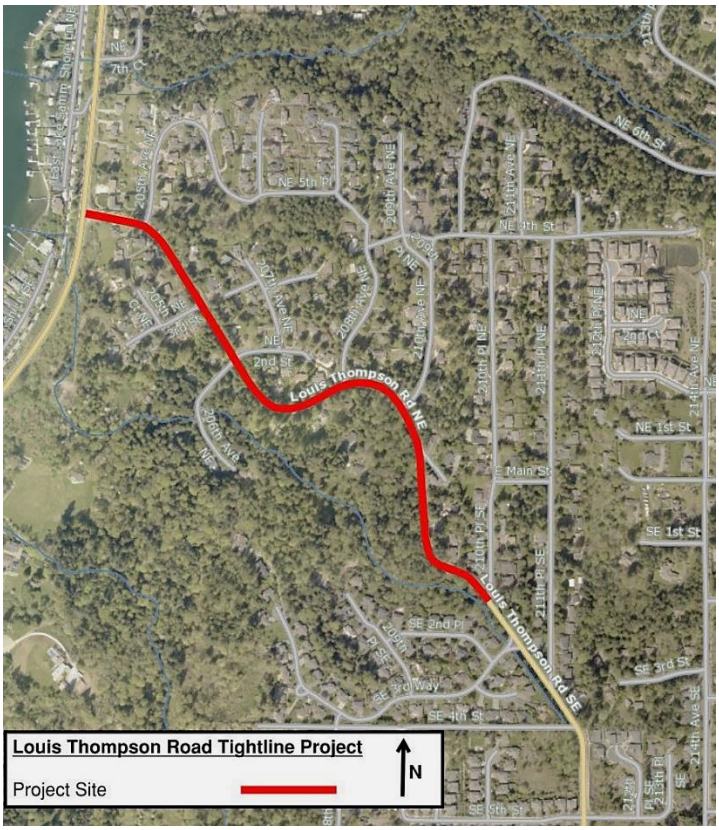

Figure 2. Project Site Map

2 MAINTENANCE LOCATIONS

The following section provides a brief description of the proposed water quality and flow control facility maintenance locations.

2.1 WQ-1 AND FLOW CONTROL FACILITY

WQ-1 is located on the east side of Louis Thompson Road and within the proposed sidewalk, southwest of 22 Louis Thompson Road SE, Sammamish, WA 98074. Dual detention tank pipes are located downstream of the water quality facility with a flow restrictor in CB-60**.**

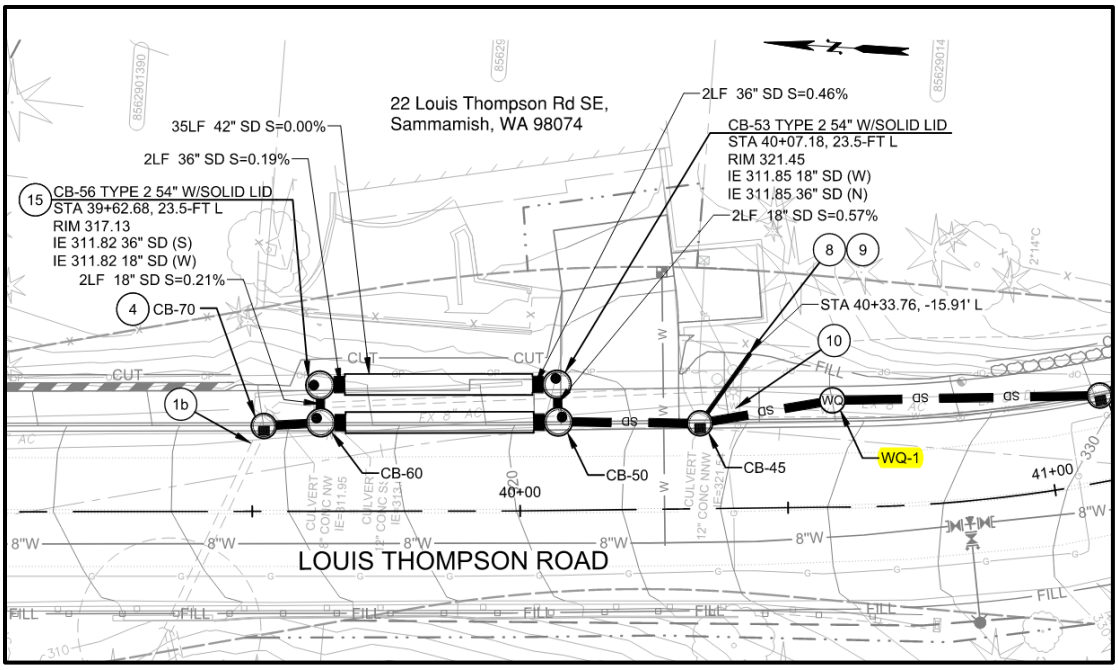

Figure 3. Maintenance Location – WQ-1 and Flow Control Facility

2.2 WQ-2 AND FLOW CONTROL FACILITY

WQ-2 is located on the east side of Louis Thompson Rd and within the proposed sidewalk, south of Thompson Hill Road SE and west of 10 Louis Thompson Rd NE, Sammamish, WA 98074. Dual detention tank pipes are located downstream of the water quality facility with a flow restrictor in CB-120. See **Figure 4** below**.**

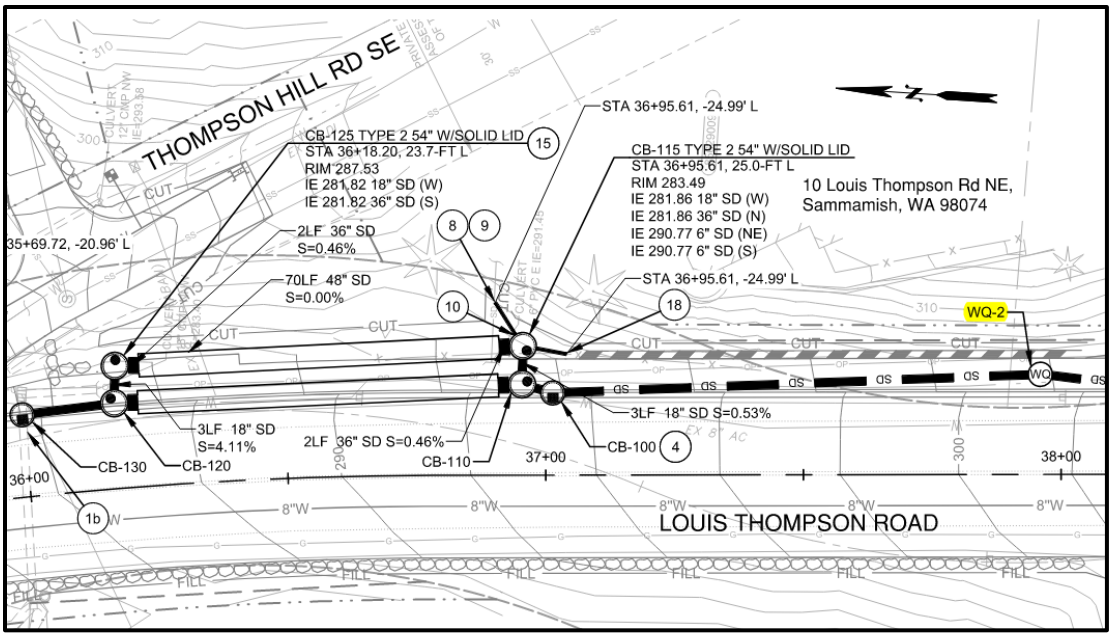

Figure 4. Maintenance Location – WQ-2 and Flow Control Facility

2.3 WQ-3 AND FLOW CONTROL FACILITY

WQ-3 is located on the north-east side of Louis Thompson Road, north-west of 210th Avenue NE and south of 108 Louis Thompson Rd NE, Sammamish, WA 98074. A flow splitter catch basin is included in the system for the bypass of high flows upstream of WQ-3 (CB-180). A detention tank is located downstream of the water quality facility with a flow restrictor in CB-200. See **Figure 5** below**.**

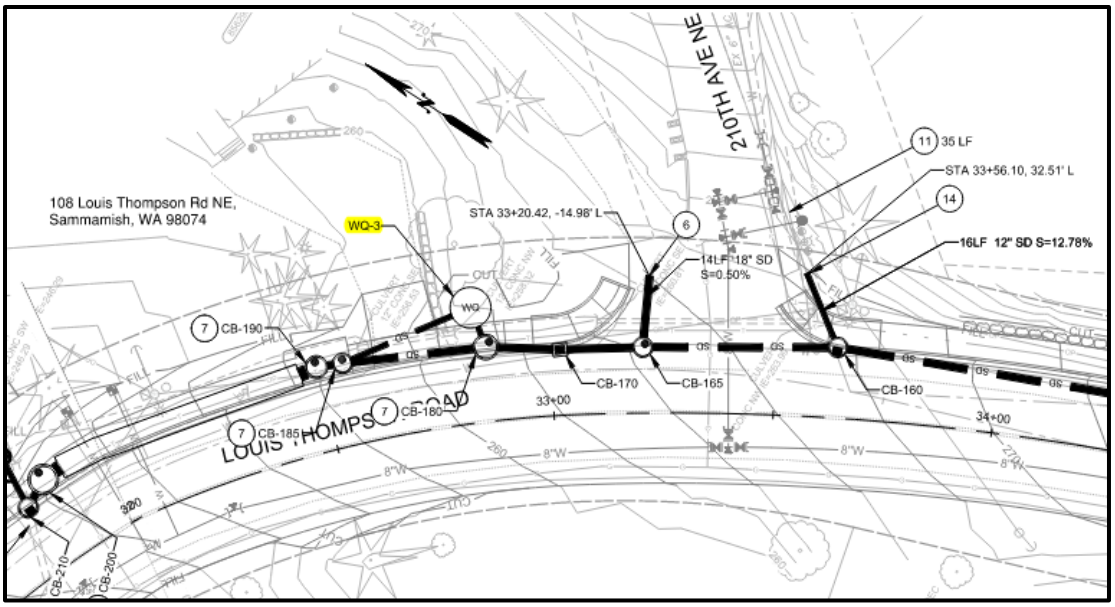

Figure 5. Maintenance Location – WQ-3 and Flow Control Facility

2.4 WQ-4 AND FLOW CONTROL FACILITY

WQ-4 is located on the north-east side of Louis Thompson Road, at the intersection with NE 3rd Street and west of 305 207th Ave NE, Sammamish, WA 98074. A flow splitter catch basin is included in the system for the bypass of high flows upstream of WQ-4 (CB-365). A detention tank is located downstream of the water quality facility with a flow restrictor in CB-405. See **Figure 6** below**.**

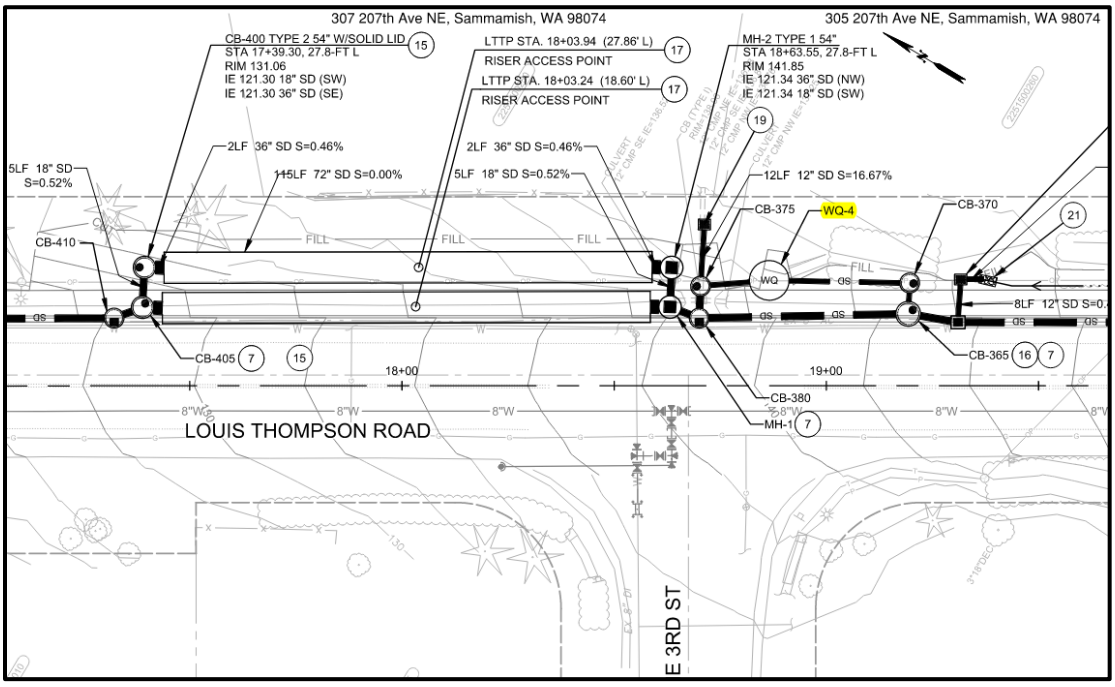

Figure 6. Maintenance Location – WQ-4 and Flow Control Facility

3 MAINTENANCE PROCEDURE

This section provides a description of the maintenance equipment, frequency, cautions, inspection procedures, and data collection forms.

3.1 WATER QUALITY FACILITY – STORMFILTER WITH ZPG

An operations and maintenance guide for the StormFilter with ZPG units is provided in Appendix A. The StormFilter units are located within the right-of-way of Louis Thompson Road SE and are to be maintained by City maintenance personnel. See **Figure 7** and **Figure 8** for the locations of the StormFilter cartridges for the two facility sizes proposed.

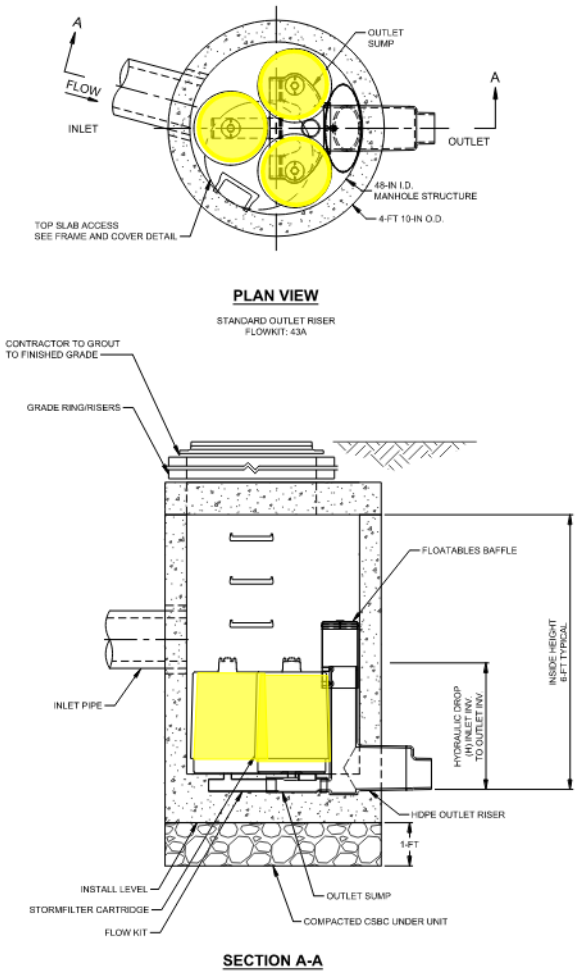

Figure 7. StormFilter Facility Details: 4-foot Diameter Manhole (WQ-1 and WQ-2)

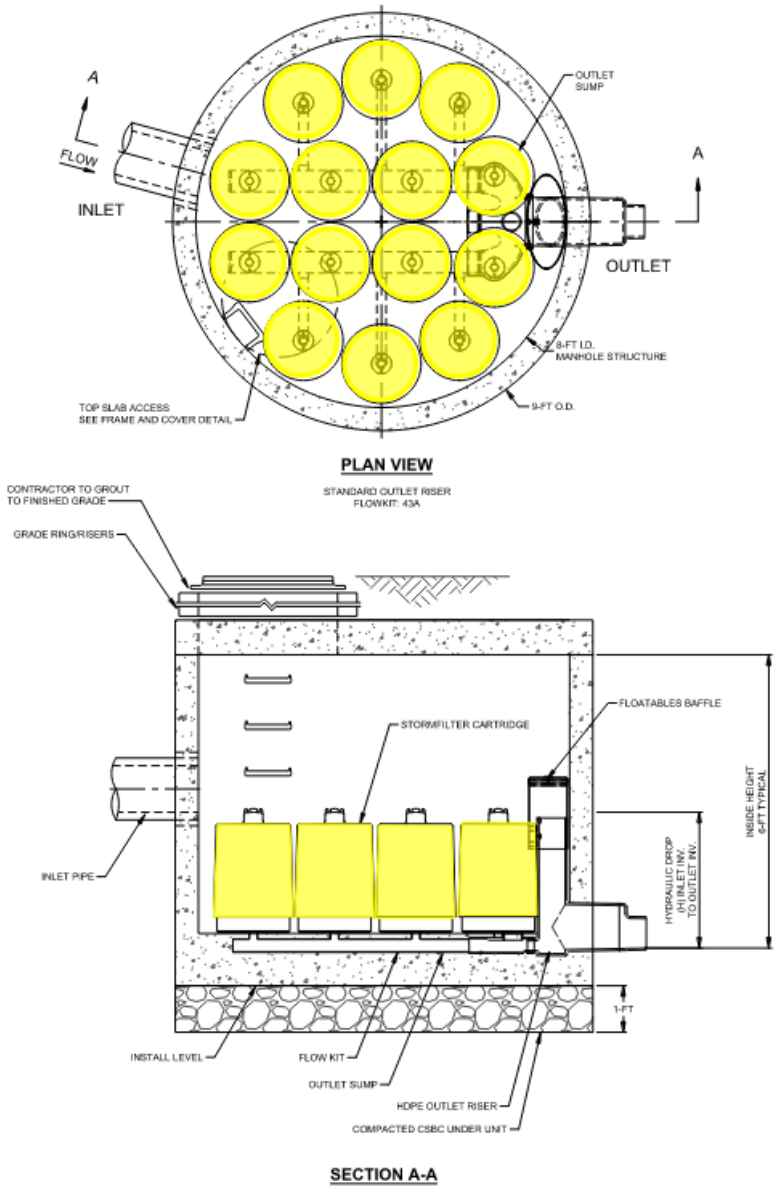

Figure 8. StormFilter Facility Details: 8-foot Diameter Manhole (WQ-3 and WQ-4)

Typical inspections and maintenance need to occur every 12 months with replacing the media cartridges and removing accumulated sediment from the vault.

3.2 WATER QUALITY FLOW SPILLTER

Standard maintenance requirements from the King County Surface Water Manual are included in Appendix B for recommended flow splitter maintenance procedures. The flow splitters are located within the right-of-way of Louis Thompson Road SE and will be maintained by City of Sammamish maintenance personnel. The flow splitters are located within CB-180 and CB-365.

3.3 FLOW CONTROL FACILITY – DETENTION TANK

Standard maintenance requirements from the King County Surface Water Manual are included in Appendix B for recommended detention tank and flow restrictor maintenance procedures. The flow restrictors are located within the right-of-way of Louis Thompson Road SE and will be maintained by City of Sammamish maintenance personnel. The flow restrictors are located within CB-60, CB-120, CB-200, and CB-405.

3.4 CATCH BASINS, MANHOLES, CONVEYANCE PIPES, AND DITCHES

Standard maintenance requirements from the King County Surface Water Manual are included in Appendix B for recommended catch basin, manhole, conveyance pipe, and ditch maintenance procedures. The catch basins and manholes are located within the right-of-way of Louis Thompson Road SE and will be maintained by City maintenance personnel.

4 CONCLUSION

This O&M manual provides suggested maintenance practices for stormwater elements installed as part of the City's Louis Thompson Road tightline project. Maintaining these stormwater elements following these standard practices will help ensure the system continues to function as intended.

APPENDIX A
STORMFILTER MAINTENANCE GUIDE

CONTECH®
ENGINEERED SOLUTIONS

StormFilter Inspection and Maintenance Procedures

The Stormwater Management StormFilter®

Maintenance Guidelines

The primary purpose of the Stormwater Management StormFilter® is to filter and prevent pollutants from entering our waterways. Like any effective filtration system, periodically these pollutants must be removed to restore the StormFilter to its full efficiency and effectiveness.

Maintenance requirements and frequency are dependent on the pollutant load characteristics of each site. Maintenance activities may be required in the event of a chemical spill or due to excessive sediment loading from site erosion or extreme storms. It is a good practice to inspect the system after major storm events.

Maintenance Procedures

Although there are many effective maintenance options, we believe the following procedure to be efficient, using common equipment and existing maintenance protocols. The following two-step procedure is recommended::

1. **Inspection**
   - Inspection of the vault interior to determine the need for maintenance.
2. **Maintenance**
   - Cartridge replacement
   - Sediment removal

Inspection and Maintenance Timing

At least one scheduled inspection should take place per year with maintenance following as warranted.

First, an inspection should be done before the winter season. During the inspection the need for maintenance should be determined and, if disposal during maintenance will be required, samples of the accumulated sediments and media should be obtained.

Second, if warranted, a maintenance (replacement of the filter cartridges and removal of accumulated sediments) should be performed during periods of dry weather.

In addition to these two activities, it is important to check the condition of the StormFilter unit after major storms for potential damage caused by high flows and for high sediment accumulation that may be caused by localized erosion in the drainage area. It may be necessary to adjust the inspection/ maintenance schedule depending on the actual operating conditions encountered by the system. In general, inspection activities can be conducted at any time, and maintenance should occur, if warranted, during dryer months in late summer to early fall.

Maintenance Frequency

The primary factor for determining frequency of maintenance for the StormFilter is sediment loading.

A properly functioning system will remove solids from water by trapping particulates in the porous structure of the filter media inside the cartridges. The flow through the system will naturally decrease as more and more particulates are trapped. Eventually the flow through the cartridges will be low enough to require replacement. It may be possible to extend the usable span of the cartridges by removing sediment from upstream trapping devices on a routine as-needed basis, in order to prevent material from being re-suspended and discharged to the StormFilter treatment system.

The average maintenance lifecycle is approximately 1-5 years. Site conditions greatly influence maintenance requirements. StormFilter units located in areas with erosion or active construction may need to be inspected and maintained more often than those with fully stabilized surface conditions.

Regulatory requirements or a chemical spill can shift maintenance timing as well. The maintenance frequency may be adjusted as additional monitoring information becomes available during the inspection program. Areas that develop known problems should be inspected more frequently than areas that demonstrate no problems, particularly after major storms. Ultimately, inspection and maintenance activities should be scheduled based on the historic records and characteristics of an individual StormFilter system or site. It is recommended that the site owner develop a database to properly manage StormFilter inspection and maintenance programs..

Inspection Procedures

The primary goal of an inspection is to assess the condition of the cartridges relative to the level of visual sediment loading as it relates to decreased treatment capacity. It may be desirable to conduct this inspection during a storm to observe the relative flow through the filter cartridges. If the submerged cartridges are severely plugged, then typically large amounts of sediments will be present and very little flow will be discharged from the drainage pipes. If this is the case, then maintenance is warranted and the cartridges need to be replaced.

Warning: In the case of a spill, the worker should abort inspection activities until the proper guidance is obtained. Notify the local hazard control agency and Contech Engineered Solutions immediately.

To conduct an inspection:

Important: Inspection should be performed by a person who is familiar with the operation and configuration of the StormFilter treatment unit and the unit's role, relative to detention or retention facilities onsite.

1. If applicable, set up safety equipment to protect and notify surrounding vehicle and pedestrian traffic.
2. Visually inspect the external condition of the unit and take notes concerning defects/problems.
3. Open the access portals to the vault and allow the system vent.
4. Without entering the vault, visually inspect the inside of the unit, and note accumulations of liquids and solids.
5. Be sure to record the level of sediment build-up on the floor of the vault, in the forebay, and on top of the cartridges. If flow is occurring, note the flow of water per drainage pipe. Record all observations. Digital pictures are valuable for historical documentation.
6. Close and fasten the access portals.
7. Remove safety equipment.
8. If appropriate, make notes about the local drainage area relative to ongoing construction, erosion problems, or high loading of other materials to the system.
9. Discuss conditions that suggest maintenance and make decision as to whether or not maintenance is needed.

Maintenance Decision Tree

The need for maintenance is typically based on results of the inspection. The following Maintenance Decision Tree should be used as a general guide. (Other factors, such as Regulatory Requirements, may need to be considered).

Please note Stormwater Management StormFilter devices installed downstream of, or integrated within, a stormwater storage facility typically have different operational parameters (i.e. draindown time). In these cases, the inspector must understand the relationship between the retention/detention facility and the treatment system by evaluating site specific civil engineering plans, or contacting the engineer of record, and make adjustments to the below guidance as necessary. Sediment deposition depths and patterns within the StormFilter are likely to be quite different compared to systems without upstream storage and therefore shouldn't be used exclusively to evaluate a need for maintenance.

1. Sediment loading on the vault floor.
   a. If >4" of accumulated sediment, maintenance is required.
2. Sediment loading on top of the cartridge.
   a. If >1/4" of accumulation, maintenance is required.
3. Submerged cartridges.
   a. If >4" of static water above cartridge bottom for more than 24 hours after end of rain event, maintenance is required. (Catch basins have standing water in the cartridge bay.)
4. Plugged media.
   a. While not required in all cases, inspection of the media within the cartridge may provide valuable additional information.
   b. If pore space between media granules is absent, maintenance is required.
5. Bypass condition.
   a. If inspection is conducted during an average rain fall event and StormFilter remains in bypass condition (water over the internal outlet baffle wall or submerged cartridges), maintenance is required.
6. Hazardous material release.
   a. If hazardous material release (automotive fluids or other) is reported, maintenance is required.
7. Pronounced scum line.
   a. If pronounced scum line (say ≥ 1/4" thick) is present above top cap, maintenance is required.

Maintenance

Depending on the configuration of the particular system, maintenance personnel will be required to enter the vault to perform the maintenance.

Important: If vault entry is required, OSHA rules for confined space entry must be followed.

Filter cartridge replacement should occur during dry weather. It may be necessary to plug the filter inlet pipe if base flows is occurring.

Replacement cartridges can be delivered to the site or customers facility. Information concerning how to obtain the replacement cartridges is available from Contech Engineered Solutions.

Warning: In the case of a spill, the maintenance personnel should abort maintenance activities until the proper guidance is obtained. Notify the local hazard control agency and Contech Engineered Solutions immediately.

To conduct cartridge replacement and sediment removal maintenance:

1. If applicable, set up safety equipment to protect maintenance personnel and pedestrians from site hazards.
2. Visually inspect the external condition of the unit and take notes concerning defects/problems.
3. Open the doors (access portals) to the vault and allow the system to vent.
4. Without entering the vault, give the inside of the unit, including components, a general condition inspection.
5. Make notes about the external and internal condition of the vault. Give particular attention to recording the level of sediment build-up on the floor of the vault, in the forebay, and on top of the internal components.
6. Using appropriate equipment offload the replacement cartridges (up to 150 lbs. each) and set aside.
7. Remove used cartridges from the vault using one of the following methods:

Method 1:

A. This activity will require that maintenance personnel enter the vault to remove the cartridges from the under drain manifold and place them under the vault opening for lifting (removal). Disconnect each filter cartridge from the underdrain connector by rotating counterclockwise 1/4 of a turn. Roll the loose cartridge, on edge, to a convenient spot beneath the vault access.

   Using appropriate hoisting equipment, attach a cable from the boom, crane, or tripod to the loose cartridge. Contact Contech Engineered Solutions for suggested attachment devices.

B. Remove the used cartridges (up to 250 lbs. each) from the vault.

Important: Care must be used to avoid damaging the cartridges during removal and installation. The cost of repairing components damaged during maintenance will be the responsibility of the owner.

C. Set the used cartridge aside or load onto the hauling truck.

D. Continue steps a through c until all cartridges have been removed.

Method 2:

A. This activity will require that maintenance personnel enter the vault to remove the cartridges from the under drain manifold and place them under the vault opening for lifting (removal). Disconnect each filter cartridge from the underdrain connector by rotating counterclockwise 1/4 of a turn. Roll the loose cartridge, on edge, to a convenient spot beneath the vault access.

B. Unscrew the cartridge cap.

C. Remove the cartridge hood and float.

D. At location under structure access, tip the cartridge on its side.

E. Empty the cartridge onto the vault floor. Reassemble the empty cartridge.

F. Set the empty, used cartridge aside or load onto the hauling truck.

G. Continue steps a through e until all cartridges have been removed.

8. Remove accumulated sediment from the floor of the vault and from the forebay. This can most effectively be accomplished by use of a vacuum truck.
9. Once the sediments are removed, assess the condition of the vault and the condition of the connectors.
10. Using the vacuum truck boom, crane, or tripod, lower and install the new cartridges. Once again, take care not to damage connections.
11. Close and fasten the door.
12. Remove safety equipment.
13. Finally, dispose of the accumulated materials in accordance with applicable regulations. Make arrangements to return the used **empty** cartridges to Contech Engineered Solutions.

Material Disposal

The accumulated sediment found in stormwater treatment and conveyance systems must be handled and disposed of in accordance with regulatory protocols. It is possible for sediments to contain measurable concentrations of heavy metals and organic chemicals (such as pesticides and petroleum products). Areas with the greatest potential for high pollutant loading include industrial areas and heavily traveled roads.

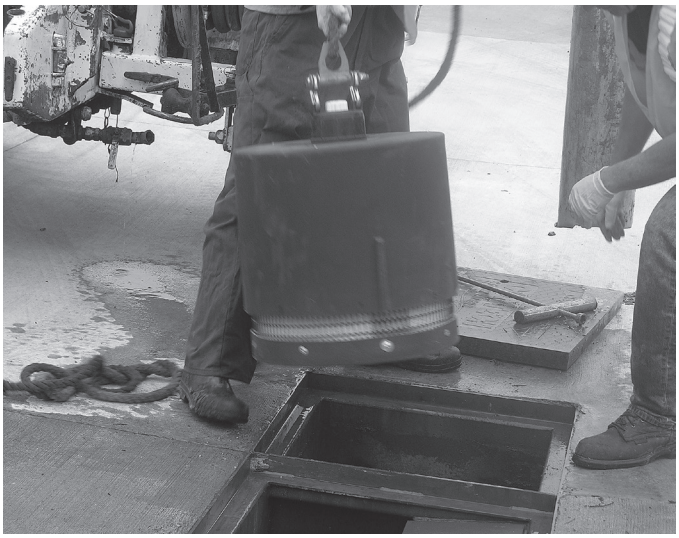
Sediments and water must be disposed of in accordance with all applicable waste disposal regulations. When scheduling maintenance, consideration must be made for the disposal of solid and liquid wastes. This typically requires coordination with a local landfill for solid waste disposal. For liquid waste disposal a number of options are available including a municipal vacuum truck decant facility, local waste water treatment plant or on-site treatment and discharge.

Related Maintenance Activities - Performed on an as-needed basis

StormFilter units are often just one of many structures in a more comprehensive stormwater drainage and treatment system.

In order for maintenance of the StormFilter to be successful, it is imperative that all other components be properly maintained. The maintenance/repair of upstream facilities should be carried out prior to StormFilter maintenance activities.

In addition to considering upstream facilities, it is also important to correct any problems identified in the drainage area. Drainage area concerns may include: erosion problems, heavy oil loading, and discharges of inappropriate materials.



Inspection Report

- Site-specific design support is available from our engineers.

APPENDIX B
KING COUNTY STANDARD MAINTENANCE PROCEDURES

NO. 3 – DETENTION TANKS AND VAULTS

Maintenance Component	Defect or Problem	Conditions When Maintenance is Needed	Results Expected When Maintenance is Performed
Site	Trash and debris	Any trash and debris which exceed 1 cubic foot per 1,000 square feet (this is about equal to the amount of trash it would take to fill up one standard size office garbage can). In general, there should be no visual evidence of dumping.	Trash and debris cleared from site.
	Noxious weeds	Any noxious or nuisance vegetation which may constitute a hazard to County personnel or the public.	Noxious and nuisance vegetation removed according to applicable regulations. No danger of noxious vegetation where County personnel or the public might normally be.
	Contaminants and pollution	Any evidence of contaminants or pollution such as oil, gasoline, concrete slurries or paint.	Materials removed and disposed of according to applicable regulations. Source control BMPs implemented if appropriate. No contaminants present other than a surface oil film.
	Grass/groundcover	Grass or groundcover exceeds 18 inches in height.	Grass or groundcover mowed to a height no greater than 6 inches.
Tank or Vault Storage Area	Trash and debris	Any trash and debris accumulated in vault or tank (includes floatables and non-floatables).	No trash or debris in vault.
	Sediment accumulation	Accumulated sediment depth exceeds 10% of the diameter of the storage area for ½ length of storage vault or any point depth exceeds 15% of diameter. Example: 72-inch storage tank would require cleaning when sediment reaches depth of 7 inches for more than ½ length of tank.	All sediment removed from storage area.
Tank Structure	Plugged air vent	Any blockage of the vent.	Tank or vault freely vents.
	Tank bent out of shape	Any part of tank/pipe is bent out of shape more than 10% of its design shape.	Tank repaired or replaced to design.
	Gaps between sections, damaged joints or cracks or tears in wall	A gap wider than ½-inch at the joint of any tank sections or any evidence of soil particles entering the tank at a joint or through a wall.	No water or soil entering tank through joints or walls.
Vault Structure	Damage to wall, frame, bottom, and/or top slab	Cracks wider than ½-inch, any evidence of soil entering the structure through cracks or qualified inspection personnel determines that the vault is not structurally sound.	Vault is sealed and structurally sound.
Inlet/Outlet Pipes	Sediment accumulation	Sediment filling 20% or more of the pipe.	Inlet/outlet pipes clear of sediment.
	Trash and debris	Trash and debris accumulated in inlet/outlet pipes (includes floatables and non-floatables).	No trash or debris in pipes.
	Damaged	Cracks wider than ½-inch at the joint of the inlet/outlet pipes or any evidence of soil entering at the joints of the inlet/outlet pipes.	No cracks more than ¼-inch wide at the joint of the inlet/outlet pipe.

NO. 3 – DETENTION TANKS AND VAULTS

Maintenance Component	Defect or Problem	Conditions When Maintenance is Needed	Results Expected When Maintenance is Performed
Access Manhole	Cover/lid not in place	Cover/lid is missing or only partially in place. **Any open manhole requires immediate maintenance.**	Manhole access covered.
	Locking mechanism not working	Mechanism cannot be opened by one maintenance person with proper tools. Bolts cannot be seated. Self-locking cover/lid does not work.	Mechanism opens with proper tools.
	Cover/lid difficult to remove	One maintenance person cannot remove cover/lid after applying 80 lbs of lift.	Cover/lid can be removed and reinstalled by one maintenance person.
	Ladder rungs unsafe	Missing rungs, misalignment, rust, or cracks.	Ladder meets design standards. Allows maintenance person safe access.
Large access doors/plate	Damaged or difficult to open	Large access doors or plates cannot be opened/removed using normal equipment.	Replace or repair access door so it can opened as designed.
	Gaps, doesn't cover completely	Large access doors not flat and/or access opening not completely covered.	Doors close flat; covers access opening completely.
	Lifting Rings missing, rusted	Lifting rings not capable of lifting weight of door or plate.	Lifting rings sufficient to lift or remove door or plate.

NO. 4 – CONTROL STRUCTURE/FLOW RESTRICTOR

Maintenance Component	Defect or Problem	Condition When Maintenance is Needed	Results Expected When Maintenance is Performed
Structure	Trash and debris	Trash or debris of more than ½ cubic foot which is located immediately in front of the structure opening or is blocking capacity of the structure by more than 10%.	No Trash or debris blocking or potentially blocking entrance to structure.
		Trash or debris in the structure that exceeds $^1/_3$ the depth from the bottom of basin to invert the lowest pipe into or out of the basin.	No trash or debris in the structure.
		Deposits of garbage exceeding 1 cubic foot in volume.	No condition present which would attract or support the breeding of insects or rodents.
	Sediment	Sediment exceeds 60% of the depth from the bottom of the structure to the invert of the lowest pipe into or out of the structure or the bottom of the FROP-T section or is within 6 inches of the invert of the lowest pipe into or out of the structure or the bottom of the FROP-T section.	Sump of structure contains no sediment.
	Damage to frame and/or top slab	Corner of frame extends more than ¾ inch past curb face into the street (If applicable).	Frame is even with curb.
		Top slab has holes larger than 2 square inches or cracks wider than ¼ inch.	Top slab is free of holes and cracks.
		Frame not sitting flush on top slab, i.e., separation of more than ¾ inch of the frame from the top slab.	Frame is sitting flush on top slab.
	Cracks in walls or bottom	Cracks wider than ½ inch and longer than 3 feet, any evidence of soil particles entering structure through cracks, or maintenance person judges that structure is unsound.	Structure is sealed and structurally sound.
		Cracks wider than ½ inch and longer than 1 foot at the joint of any inlet/outlet pipe or any evidence of soil particles entering structure through cracks.	No cracks more than $^1/_4$ inch wide at the joint of inlet/outlet pipe.
	Settlement/ misalignment	Structure has settled more than 1 inch or has rotated more than 2 inches out of alignment.	Basin replaced or repaired to design standards.
	Damaged pipe joints	Cracks wider than ½-inch at the joint of the inlet/outlet pipes or any evidence of soil entering the structure at the joint of the inlet/outlet pipes.	No cracks more than ¼-inch wide at the joint of inlet/outlet pipes.
	Contaminants and pollution	Any evidence of contaminants or pollution such as oil, gasoline, concrete slurries or paint.	Materials removed and disposed of according to applicable regulations. Source control BMPs implemented if appropriate. No contaminants present other than a surface oil film.
	Ladder rungs missing or unsafe	Ladder is unsafe due to missing rungs, misalignment, rust, cracks, or sharp edges.	Ladder meets design standards and allows maintenance person safe access.
FROP-T Section	Damage	T section is not securely attached to structure wall and outlet pipe structure should support at least 1,000 lbs of up or down pressure.	T section securely attached to wall and outlet pipe.
		Structure is not in upright position (allow up to 10% from plumb).	Structure in correct position.
		Connections to outlet pipe are not watertight or show signs of deteriorated grout.	Connections to outlet pipe are water tight; structure repaired or replaced and works as designed.
		Any holes—other than designed holes—in the structure.	Structure has no holes other than designed holes.
Cleanout Gate	Damaged or missing	Cleanout gate is missing.	Replace cleanout gate.

NO. 4 – CONTROL STRUCTURE/FLOW RESTRICTOR

Maintenance Component	Defect or Problem	Condition When Maintenance is Needed	Results Expected When Maintenance is Performed
		Cleanout gate is not watertight.	Gate is watertight and works as designed.
		Gate cannot be moved up and down by one maintenance person.	Gate moves up and down easily and is watertight.
		Chain/rod leading to gate is missing or damaged.	Chain is in place and works as designed.
Orifice Plate	Damaged or missing	Control device is not working properly due to missing, out of place, or bent orifice plate.	Plate is in place and works as designed.
	Obstructions	Any trash, debris, sediment, or vegetation blocking the plate.	Plate is free of all obstructions and works as designed.
Overflow Pipe	Obstructions	Any trash or debris blocking (or having the potential of blocking) the overflow pipe.	Pipe is free of all obstructions and works as designed.
	Deformed or damaged lip	Lip of overflow pipe is bent or deformed.	Overflow pipe does not allow overflow at an elevation lower than design
Inlet/Outlet Pipe	Sediment accumulation	Sediment filling 20% or more of the pipe.	Inlet/outlet pipes clear of sediment.
	Trash and debris	Trash and debris accumulated in inlet/outlet pipes (includes floatables and non-floatables).	No trash or debris in pipes.
	Damaged	Cracks wider than ½-inch at the joint of the inlet/outlet pipes or any evidence of soil entering at the joints of the inlet/outlet pipes.	No cracks more than ¼-inch wide at the joint of the inlet/outlet pipe.
Metal Grates (If Applicable)	Unsafe grate opening	Grate with opening wider than $^{7}/_{8}$ inch.	Grate opening meets design standards.
	Trash and debris	Trash and debris that is blocking more than 20% of grate surface.	Grate free of trash and debris.
	Damaged or missing	Grate missing or broken member(s) of the grate.	Grate is in place and meets design standards.
Manhole Cover/Lid	Cover/lid not in place	Cover/lid is missing or only partially in place. **Any open structure requires urgent maintenance.**	Cover/lid protects opening to structure.
	Locking mechanism Not Working	Mechanism cannot be opened by one maintenance person with proper tools. Bolts cannot be seated. Self-locking cover/lid does not work.	Mechanism opens with proper tools.
	Cover/lid difficult to Remove	One maintenance person cannot remove cover/lid after applying 80 lbs. of lift.	Cover/lid can be removed and reinstalled by one maintenance person.

NO. 5 – CATCH BASINS AND MANHOLES

Maintenance Component	Defect or Problem	Condition When Maintenance is Needed	Results Expected When Maintenance is Performed
Structure	Sediment	Sediment exceeds 60% of the depth from the bottom of the catch basin to the invert of the lowest pipe into or out of the catch basin or is within 6 inches of the invert of the lowest pipe into or out of the catch basin.	Sump of catch basin contains no sediment.
	Trash and debris	Trash or debris of more than ½ cubic foot which is located immediately in front of the catch basin opening or is blocking capacity of the catch basin by more than 10%.	No Trash or debris blocking or potentially blocking entrance to catch basin.
		Trash or debris in the catch basin that exceeds 1/3 the depth from the bottom of basin to invert the lowest pipe into or out of the basin.	No trash or debris in the catch basin.
		Dead animals or vegetation that could generate odors that could cause complaints or dangerous gases (e.g., methane).	No dead animals or vegetation present within catch basin.
		Deposits of garbage exceeding 1 cubic foot in volume.	No condition present which would attract or support the breeding of insects or rodents.
	Damage to frame and/or top slab	Corner of frame extends more than ¾ inch past curb face into the street (If applicable).	Frame is even with curb.
		Top slab has holes larger than 2 square inches or cracks wider than ¼ inch.	Top slab is free of holes and cracks.
		Frame not sitting flush on top slab, i.e., separation of more than ¾ inch of the frame from the top slab.	Frame is sitting flush on top slab.
	Cracks in walls or bottom	Cracks wider than ½ inch and longer than 3 feet, any evidence of soil particles entering catch basin through cracks, or maintenance person judges that catch basin is unsound.	Catch basin is sealed and is structurally sound.
		Cracks wider than ½ inch and longer than 1 foot at the joint of any inlet/outlet pipe or any evidence of soil particles entering catch basin through cracks.	No cracks more than 1/4 inch wide at the joint of inlet/outlet pipe.
	Settlement/ misalignment	Catch basin has settled more than 1 inch or has rotated more than 2 inches out of alignment.	Basin replaced or repaired to design standards.
	Damaged pipe joints	Cracks wider than ½-inch at the joint of the inlet/outlet pipes or any evidence of soil entering the catch basin at the joint of the inlet/outlet pipes.	No cracks more than ¼-inch wide at the joint of inlet/outlet pipes.
	Contaminants and pollution	Any evidence of contaminants or pollution such as oil, gasoline, concrete slurries or paint.	Materials removed and disposed of according to applicable regulations. Source control BMPs implemented if appropriate. No contaminants present other than a surface oil film.
Inlet/Outlet Pipe	Sediment accumulation	Sediment filling 20% or more of the pipe.	Inlet/outlet pipes clear of sediment.
	Trash and debris	Trash and debris accumulated in inlet/outlet pipes (includes floatables and non-floatables).	No trash or debris in pipes.
	Damaged	Cracks wider than ½-inch at the joint of the inlet/outlet pipes or any evidence of soil entering at the joints of the inlet/outlet pipes.	No cracks more than ¼-inch wide at the joint of the inlet/outlet pipe.

NO. 5 – CATCH BASINS AND MANHOLES

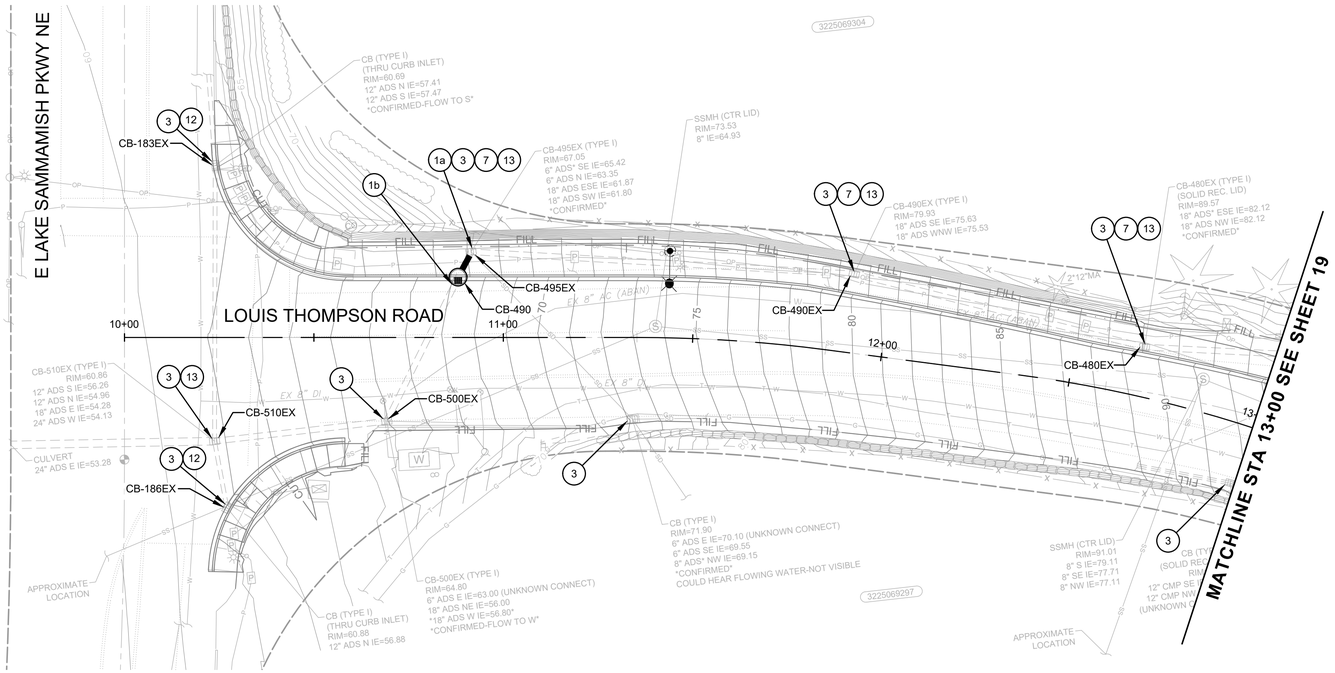
Maintenance Component	Defect or Problem	Condition When Maintenance is Needed	Results Expected When Maintenance is Performed
Metal Grates (Catch Basins)	Unsafe grate opening	Grate with opening wider than $^{7}/_{8}$ inch.	Grate opening meets design standards.
	Trash and debris	Trash and debris that is blocking more than 20% of grate surface.	Grate free of trash and debris.
	Damaged or missing	Grate missing or broken member(s) of the grate. **Any open structure requires urgent maintenance.**	Grate is in place and meets design standards.
Manhole Cover/Lid	Cover/lid not in place	Cover/lid is missing or only partially in place. **Any open structure requires urgent maintenance.**	Cover/lid protects opening to structure.
	Locking mechanism Not Working	Mechanism cannot be opened by one maintenance person with proper tools. Bolts cannot be seated. Self-locking cover/lid does not work.	Mechanism opens with proper tools.
	Cover/lid difficult to Remove	One maintenance person cannot remove cover/lid after applying 80 lbs. of lift.	Cover/lid can be removed and reinstalled by one maintenance person.

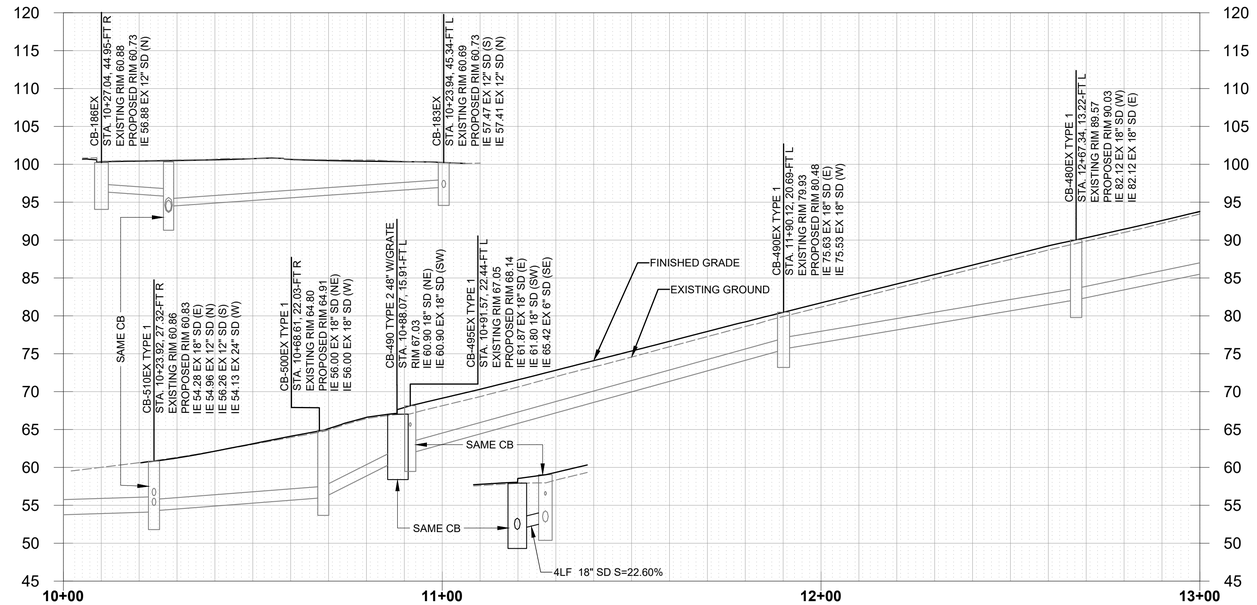
NO. 6 – CONVEYANCE PIPES AND DITCHES

Maintenance Component	Defect or Problem	Conditions When Maintenance is Needed	Results Expected When Maintenance is Performed
Pipes	Sediment & debris accumulation	Accumulated sediment or debris that exceeds 20% of the diameter of the pipe.	Water flows freely through pipes.
	Vegetation/roots	Vegetation/roots that reduce free movement of water through pipes.	Water flows freely through pipes.
	Contaminants and pollution	Any evidence of contaminants or pollution such as oil, gasoline, concrete slurries or paint.	Materials removed and disposed of according to applicable regulations. Source control BMPs implemented if appropriate. No contaminants present other than a surface oil film.
	Damage to protective coating or corrosion	Protective coating is damaged; rust or corrosion is weakening the structural integrity of any part of pipe.	Pipe repaired or replaced.
	Damaged	Any dent that decreases the cross section area of pipe by more than 20% or is determined to have weakened structural integrity of the pipe.	Pipe repaired or replaced.
Ditches	Trash and debris	Trash and debris exceeds 1 cubic foot per 1,000 square feet of ditch and slopes.	Trash and debris cleared from ditches.
	Sediment accumulation	Accumulated sediment that exceeds 20% of the design depth.	Ditch cleaned/flushed of all sediment and debris so that it matches design.
	Noxious weeds	Any noxious or nuisance vegetation which may constitute a hazard to County personnel or the public.	Noxious and nuisance vegetation removed according to applicable regulations. No danger of noxious vegetation where County personnel or the public might normally be.
	Contaminants and pollution	Any evidence of contaminants or pollution such as oil, gasoline, concrete slurries or paint.	Materials removed and disposed of according to applicable regulations. Source control BMPs implemented if appropriate. No contaminants present other than a surface oil film.
	Vegetation	Vegetation that reduces free movement of water through ditches.	Water flows freely through ditches.
	Erosion damage to slopes	Any erosion observed on a ditch slope.	Slopes are not eroding.
	Rock lining out of place or missing (If Applicable)	One layer or less of rock exists above native soil area 5 square feet or more, any exposed native soil.	Replace rocks to design standards.

APPENDIX C
DRAINAGE PLAN AND DETAIL CONTRACT PLAN SUBSET

SEC. 32, T. 25N, R. 6E, W.M.





GENERAL NOTES:

1. CONTRACTOR SHALL VERIFY/CONFIRM THE ACCURACY OF UTILITY LOCATIONS SHOWN AND OTHER UTILITIES.
2. ALL DRAINAGE STRUCTURES ARE LOCATED BY STATION AND OFFSET TO THE CENTER OF THE STRUCTURE IN THESE SHEETS. SEE SHEET 29 FOR ELEVATION AT THE CENTER OF LID OR GRATE.
3. THE ROADWAY CENTERLINE STATIONING IS USED FOR THE PROFILES. EXISTING AND PROPOSED SURFACES ARE SHOWN ON TOP OF THE STORM PIPE NETWORK.
4. FOR SITE PREPARATION, SEE SHEETS 7-16.
5. FOR RETAINING WALLS, SIDEWALKS, DRIVEWAYS AND OTHER NON-MOTORIZED IMPROVEMENTS, SEE SHEETS 46-55.
6. LOCATION OF UTILITY CROSSINGS SHOWN ON PROFILES ARE APPROXIMATE. CONTRACTOR TO FIELD VERIFY ALL UTILITY CROSSING LOCATIONS AND DEPTHS PRIOR TO EXCAVATION ACTIVITIES, INCLUDING SERVICE LINES WITHIN PRIVATE DRIVEWAYS.
7. SEE APPENDIX X OF PROJECT'S SPECIAL PROVISIONS FOR WORK (SITE PREPARATION AND PROPOSED CONDITION) RELATED TO THE WATER LINE, HYDRANTS, AND METERS/VALVES FROM STA 13+50 TO STA 45+50. PROPOSED WATER MAIN AND ASSOCIATED ELEMENTS ARE SHOWN FOR REFERENCE IN THESE SHEETS.

(##) CONSTRUCTION NOTES:

1. CONNECTION TO DRAINAGE STRUCTURE
   a. CONNECTION TO EXISTING STRUCTURE
   b. CONNECT EXISTING PIPE TO PROPOSED STRUCTURE
2. CONSTRUCT OUTFALL PAD PER DETAIL 1 ON SHEET 33.
3. ADJUST EXISTING DRAINAGE STRUCTURE RIM TO GRADE.
4. INSTALL COMBINATION INLET PER WSDOT STANDARD PLAN B-25.20.
5. INSTALL DEBRIS CAGE ON CATCH BASIN TYPE 2 PER DETAIL 2 ON SHEET 32.
6. INSTALL STUB-OUT WITH WATER TIGHT REMOVAL PLUG FOR FUTURE CONNECTION.
7. INSTALL COMPOSITE SOLID LID WITH SLIP RESISTANT FINISH.
8. CONNECT OFFSITE LATERAL TO 8-IN STORM SEWER PIPE AT 0.5 PERCENT MINIMUM SLOPE. MINIMUM PIPE COVER PER MANUFACTURER'S RECOMMENDATION. INSTALL PIPE REDUCER AND COUPLER TO MATCH EXISTING PIPE. FIELD VERIFY LOCATION.
9. INSTALL CLEANOUT AT NEW PIPE CONNECTION TO OFFSITE LATERAL PER WSDOT STANDARD PLAN B-85.40.
10. CONNECT OFFSITE LATERAL TO CATCH BASIN.
11. DITCH MAINTENANCE.
12. REPLACE EXISTING GRATE WITH RECTANGULAR BI-DIRECTIONAL VANED GRATE.
13. REPLACE EXISTING GRATE WITH RECTANGULAR SOLID METAL COVER.
14. INSTALL BEVELED END PIPE SECTION WITH PIPE END TRASH RACK PER C.O.S FIG 7-01 AND FIG 7-02.
15. INSTALL DETENTION PIPE FLOW RESTRICTOR PER DETAIL 2 SHEET 28.
16. INSTALL FLOW SPLITTER WITH RISER SYSTEM PER DETAIL 1 SHEET 32.
17. INSTALL DETENTION PIPE ACCESS PER DETAIL 1 SHEET 28. ACCESS LOCATED BY STATION AND OFFSET TO THE CENTER OF THE RISER.
18. CONNECT WALL UNDERDRAIN TO PROPOSED STRUCTURE.
19. CONSTRUCT GRASS-LINED V-DITCH PER DETAIL 2 SHEET 33.
20. CONSTRUCT DITCH FLOW COLLECTION SYSTEM PER DETAIL 3 SHEET 33.
21. INSTALL DETENTION PIPE FLOW RESTRICTOR (BAFFLE) PER DETAIL 1 SHEET 29.
22. INSTALL DETENTION PIPE AIR VENT PER DETAIL 3 ON SHEET 28.

CITY OF SAMMAMISH
STORM DRAINAGE PLAN AND PROFILE

JOB# / DWG 10-210058
DATE 01/29/2024
SCALE H: 1"=20' V: 1"=10'
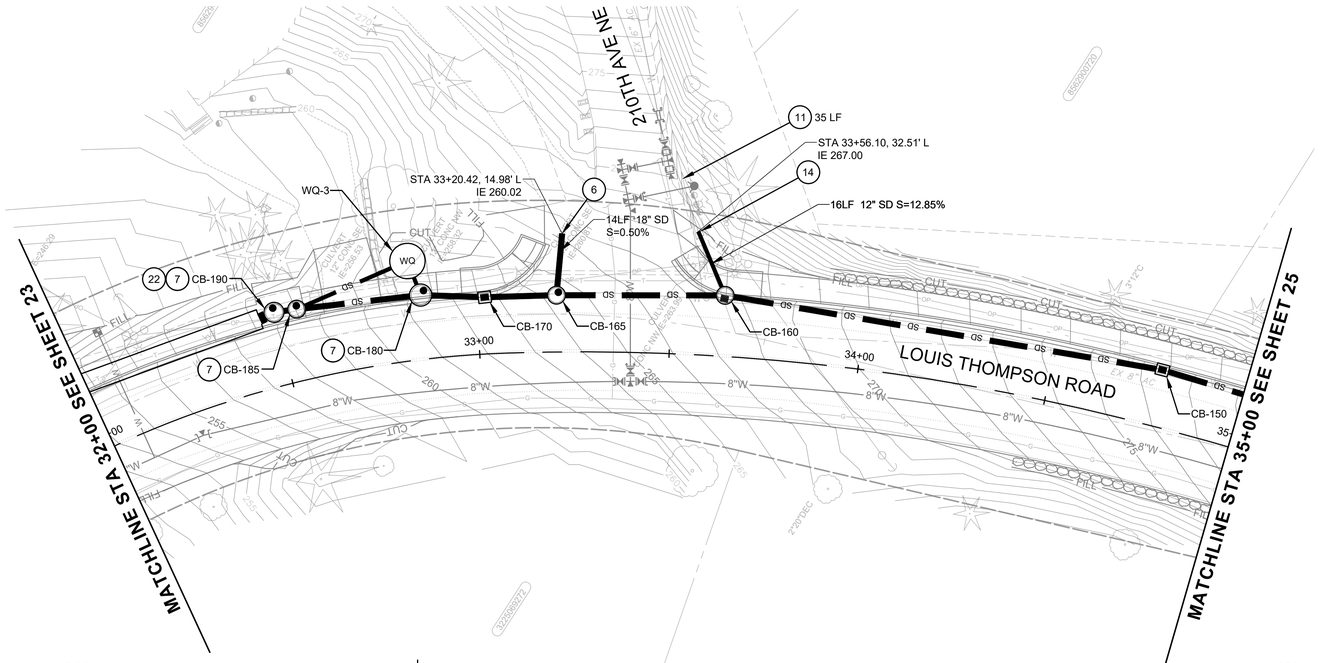
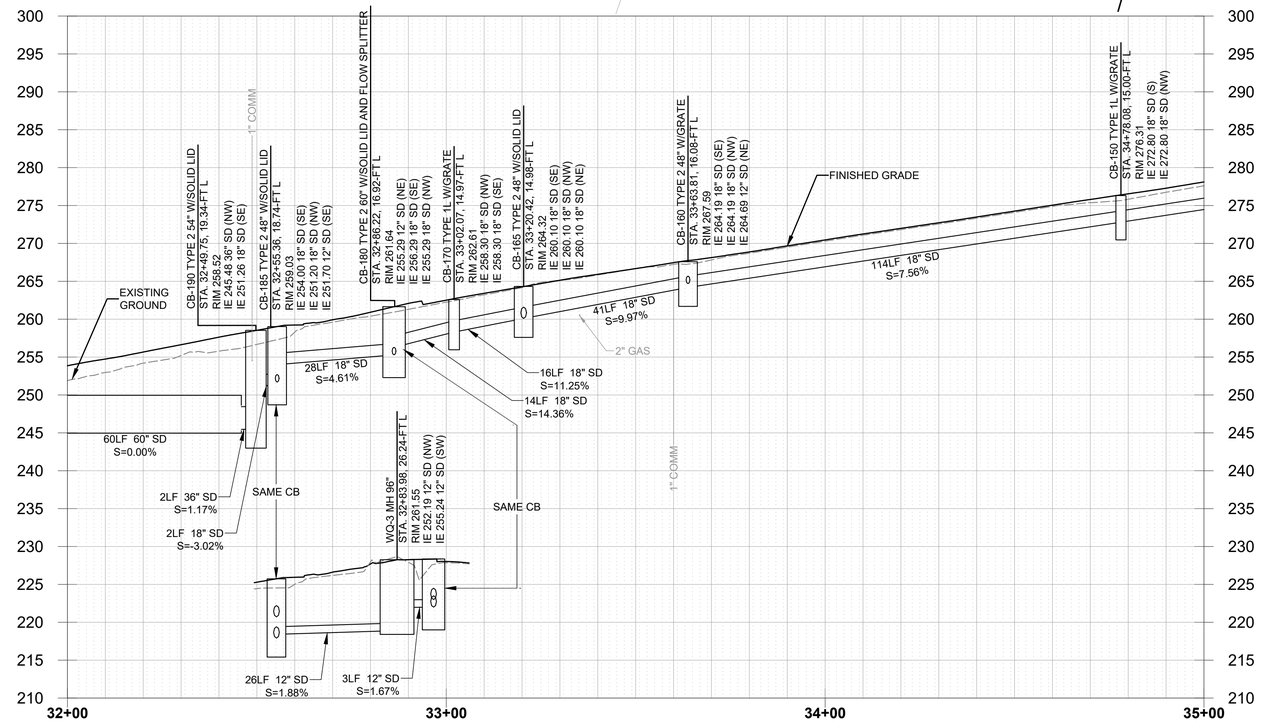
DR06
SHEET 23 of 102

FILE NAME: C:\PW_OC1_WORKINGDIR\OSBORNCONSULTING-PW.BENTLEY.COM_OSBORNCONSULTING-PW-01\ALEKSANDRA.SLATALA\DMS265661\P_10-210058_STRM.DWG
PLOT TIME: 1/24/2024 2:35 PM
USER NAME: ALEKSANDRA.SLATALA

SEC. 32, T. 25N, R. 6E, W.M.





GENERAL NOTES:

1. CONTRACTOR SHALL VERIFY/CONFIRM THE ACCURACY OF UTILITY LOCATIONS SHOWN AND OTHER UTILITIES.
2. ALL DRAINAGE STRUCTURES ARE LOCATED BY STATION AND OFFSET TO THE CENTER OF THE STRUCTURE IN THESE SHEETS. SEE SHEET 29 FOR ELEVATION AT THE CENTER OF LID OR GRATE.
3. THE ROADWAY CENTERLINE STATIONING IS USED FOR THE PROFILES. EXISTING AND PROPOSED SURFACES ARE SHOWN ON TOP OF THE STORM PIPE NETWORK.
4. FOR SITE PREPARATION, SEE SHEETS 7-16.
5. FOR RETAINING WALLS, SIDEWALKS, DRIVEWAYS AND OTHER NON-MOTORIZED IMPROVEMENTS, SEE SHEETS 46-55.
6. LOCATION OF UTILITY CROSSINGS SHOWN ON PROFILES ARE APPROXIMATE. CONTRACTOR TO FIELD VERIFY ALL UTILITY CROSSING LOCATIONS AND DEPTHS PRIOR TO EXCAVATION ACTIVITIES, INCLUDING SERVICE LINES WITHIN PRIVATE DRIVEWAYS.
7. SEE APPENDIX X OF PROJECT'S SPECIAL PROVISIONS FOR WORK (SITE PREPARATION AND PROPOSED CONDITION) RELATED TO THE WATER LINE, HYDRANTS, AND METERS/VALVES FROM STA 13+50 TO STA 45+50. PROPOSED WATER MAIN AND ASSOCIATED ELEMENTS ARE SHOWN FOR REFERENCE IN THESE SHEETS.

(##) CONSTRUCTION NOTES:

1. CONNECTION TO DRAINAGE STRUCTURE
   a. CONNECTION TO EXISTING STRUCTURE
   b. CONNECT EXISTING PIPE TO PROPOSED STRUCTURE
2. CONSTRUCT OUTFALL PAD PER DETAIL 1 ON SHEET 33.
3. ADJUST EXISTING DRAINAGE STRUCTURE RIM TO GRADE.
4. INSTALL COMBINATION INLET PER WSDOT STANDARD PLAN B-25.20.
5. INSTALL DEBRIS CAGE ON CATCH BASIN TYPE 2 PER DETAIL 2 ON SHEET 32.
6. INSTALL STUB-OUT WITH WATER TIGHT REMOVAL PLUG FOR FUTURE CONNECTION.
7. INSTALL COMPOSITE SOLID LID WITH SLIP RESISTANT FINISH.
8. CONNECT OFFSITE LATERAL TO 8-IN STORM SEWER PIPE AT 0.5 PERCENT MINIMUM SLOPE. MINIMUM PIPE COVER PER MANUFACTURER'S RECOMMENDATION. INSTALL PIPE REDUCER AND COUPLER TO MATCH EXISTING PIPE. FIELD VERIFY LOCATION.
9. INSTALL CLEANOUT AT NEW PIPE CONNECTION TO OFFSITE LATERAL PER WSDOT STANDARD PLAN B-85.40.
10. CONNECT OFFSITE LATERAL TO CATCH BASIN.
11. DITCH MAINTENANCE.
12. REPLACE EXISTING GRATE WITH RECTANGULAR BI-DIRECTIONAL VANED GRATE.
13. REPLACE EXISTING GRATE WITH RECTANGULAR SOLID METAL COVER.
14. INSTALL BEVELED END PIPE SECTION WITH PIPE END TRASH RACK PER C.O.S FIG 7-01 AND FIG 7-02.
15. INSTALL DETENTION PIPE FLOW RESTRICTOR PER DETAIL 2 SHEET 28.
16. INSTALL FLOW SPLITTER WITH RISER SYSTEM PER DETAIL 1 SHEET 32.
17. INSTALL DETENTION PIPE ACCESS PER DETAIL 1 SHEET 28. ACCESS LOCATED BY STATION AND OFFSET TO THE CENTER OF THE RISER.
18. CONNECT WALL UNDERDRAIN TO PROPOSED STRUCTURE.
19. CONSTRUCT GRASS-LINED V-DITCH PER DETAIL 2 SHEET 33.
20. CONSTRUCT DITCH FLOW COLLECTION SYSTEM PER DETAIL 3 SHEET 33.
21. INSTALL DETENTION PIPE FLOW RESTRICTOR (BAFFLE) PER DETAIL 1 SHEET 29.
22. INSTALL DETENTION PIPE AIR VENT PER DETAIL 3 ON SHEET 28.

N.T.S.

NOTES:

1. METAL PARTS: CORROSION RESISTANT. STAINLESS STEEL OR ALUMINIZED STEEL.
2. FRAME AND LADDER OR STEPS OFFSET SO:
   A. CLEANOUT GATE IS VISIBLE FROM TOP.
   B. CLIMB-DOWN SPACE IS CLEAR OF RISER AND CLEANOUT GATE.
   C. FRAME IS CLEAR OF CURB.
3. IF METAL OUTLET PIPE CONNECTS TO CEMENT CONCRETE PIPE: OUTLET PIPE TO HAVE SMOOTH O.D. EQUAL TO CONCRETE PIPE I.D. LESS 1/4-IN.
4. PROVIDE AT LEAST ONE 3-IN X .090 GAGE SUPPORT BRACKET ANCHORED TO CONCRETE WALL. (MAXIMUM 3-FT-0-IN VERTICAL SPACING)
5. LOCATE ELBOW RESTRICTOR(S) AS NECESSARY TO PROVIDE MINIMUM CLEARANCE AS SHOWN.
6. LOCATE ADDITIONAL LADDER RUNGS IN STRUCTURES USED AS ACCESS TO TANKS AND VAULT TO ALLOW ACCESS WHEN CATCH BASIN IS FILLED WITH WATER.
7. TEE SHALL BE CONSTRUCTED OF ALUMINUM CMP OR ALUMINIZED STEEL CMP MEETING WSDOT/APWA STANDARDS.

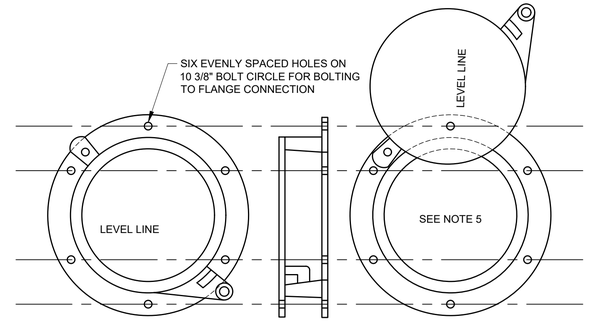
CB-200	0.87	248.53

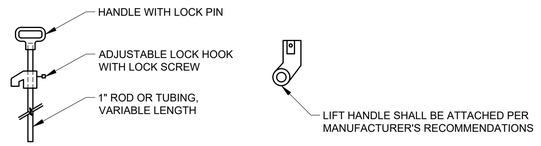
NOTES:

1. METAL PARTS: CORROSION RESISTANT STEEL PARTS STAINLESS STEEL OR ALUMINIZED STEEL.
2. PIPE SIZE, SLOPES, AND ELEVATIONS: PER PLANS. STRUCTURE TYPE, RIM: PER PLANS.
3. COVERS SHALL BE MAKED "DRAIN" WITH LOCKING BOLTS.
4. BAFFLE WALL SHALL HAVE #4 BAR AT 12 IN. SPACING EACH WAY.
5. PRECAST BAFFLE WALL SHALL BE KEYED AND GROUTED IN PLACE.
6. BOTTOM ORIFICE PLATE TO BE 1/4 IN. MIN. NON-GALVANIZED CORROSIVE RESISTANT MATERIAL AND ATTACHED WITH 1/2 IN. STAINLESS STEEL BOLTS.
7. SEE WSDOT/APWA STANDARD SPECIFICATIONS SECTION 9-05.15 FOR METAL CASTING REQUIREMENTS.

1/23 DETENTION PIPE FLOW RESTRICTOR (BAFFLE)
N.T.S.



FRONT **SIDE** **MAXIMUM OPENING OF GATE**



LIFT HANDLE

NOTES:

1. SHEAR GATE SHALL BE ALUMINUM ALLOY PER ASTM B-26-ZG-32a OR CAST IRON ASTM A48 CLASS 30B AS REQUIRED.
2. GATE SHALL BE 8 IN. DIAM. UNLESS OTHERWISE SPECIFIED.
3. GATE SHALL BE JOINED TO TEE SECTION BY BOLTING (THROUGH FLANGE), WELDING, OR OTHER SECURE MEANS.
4. LIFT ROD: AS SPECIFIED BY MFR. WITH HANDLE EXTENDING TO WITHIN ONE FOOT OF COVER AND ADJUSTABLE HOOK LOCK FASTENED TO FRAME OR UPPER HANDHOLD.
5. GATE SHALL NOT OPEN BEYOND THE CLEAR OPENING BY LIMITED HINGE MOVEMENT, STOP TAB, OR SOME OTHER DEVICE.
6. NEOPRENE RUBBER GASKET REQUIRED BETWEEN RISER MOUNTING FLANGE AND GATE FLANGE.
7. MATING SURFACES OF LID AND BODY TO BE MACHINED FOR PROPER FIT.
8. FLANGE MOUNTING BOLTS SHALL BE 3/8 IN. DIAM. STAINLESS STEEL.
9. ALTERNATE CLEANOUT/SHEAR GATES TO THE DESIGN SHOWN ARE ACCEPTABLE, PROVIDED THEY MEET THE MATERIAL SPECIFICATIONS ABOVE AND HAVE A SIX BOLT, 10 3/8 IN. BOLT CIRCLE FOR BOLTING TO THE FLANGE CONNECTION.
10. SEE THE WSDOT/APWA STANDARD SPECIFICATIONS SECTION 9-05.15 FOR METAL CASTINGS REQUIREMENTS.

NOTES:

1. THE ELEVATIONS, STATION, AND OFFSET IN THIS TABLE ARE LOCATED AT THE CENTER OF THE STRUCTURE LID OR GRATE. THE ROADWAY CENTERLINE STATIONING IS USED.
2. FOR ALL STRUCTURES WITH A GRATE, THE GRATE ELEVATION IS SET AT 0.1 FT LOWER THAN THE FINISHED SURFACE ELEVATION.

PEAK FLOW RATE (cfs)			0.34
RETURN PERIOD OF PEAK FLOW (yrs)			100
CARTRIDGE HEIGHT			27-IN
NUMBER OF CARTRIDGES REQUIRED			3
CARTRIDGE FLOW RATE (gpm)			11.25
MEDIA TYPE (PERLITE, ZPG, PSORB)			ZPG
PIPE DATA:	I.E.	MATERIAL	DIAMETER
INLET PIPE #1	322.51	TBD	18-IN
OUTLET PIPE	319.46	TBD	18-IN
RIM ELEVATION			326.00
ANTI-FLOTATION BALLAST		WIDTH	HEIGHT
		N/A	N/A

NOTES/SPECIAL REQUIREMENTS:
COMPOSITE COVER WITH SLIP RESISTANT FINISH FOR ACCESS RISER
* PER ENGINEER OF RECORD

SITE SPECIFIC DATA REQUIREMENTS			
STRUCTURE ID			WQ-2
WATER QUALITY FLOW RATE (cfs)			0.075
PEAK FLOW RATE (cfs)			0.68
RETURN PERIOD OF PEAK FLOW (yrs)			100
CARTRIDGE HEIGHT			27-IN
NUMBER OF CARTRIDGES REQUIRED			3
CARTRIDGE FLOW RATE (gpm)			11.25
MEDIA TYPE (PERLITE, ZPG, PSORB)			ZPG
PIPE DATA:	I.E.	MATERIAL	DIAMETER
INLET PIPE #1	298.30	TBD	18-IN
OUTLET PIPE	295.25	TBD	18-IN
RIM ELEVATION			301.80
ANTI-FLOTATION BALLAST		WIDTH	HEIGHT
		N/A	N/A

NOTES/SPECIAL REQUIREMENTS:
COMPOSITE COVER WITH SLIP RESISTANT FINISH FOR ACCESS RISER
* PER ENGINEER OF RECORD

GENERAL NOTES:

1. CONTECH TO PROVIDE ALL MATERIALS UNLESS NOTED OTHERWISE.
2. DIMENSIONS MARKED WITH ( ) ARE REFERENCE DIMENSIONS. ACTUAL DIMENSIONS MAY VARY.
3. FOR SITE SPECIFIC DRAWINGS WITH DETAILED VAULT DIMENSIONS AND WEIGHTS, PLEASE CONTACT YOUR CONTECH ENGINEERED SOLUTIONS LLC REPRESENTATIVE. WWW.CONTECHES.COM
4. STORMFILTER WATER QUALITY STRUCTURE SHALL BE IN ACCORDANCE WITH ALL DESIGN DATA AND INFORMATION CONTAINED IN THIS DRAWING.
5. STRUCTURE SHALL MEET AASHTO HS-20 LOAD RATING, ASSUMING EARTH COVER OF 0' - 5' [1524 MM] AND GROUNDWATER ELEVATION AT, OR BELOW, THE OUTLET PIPE INVERT ELEVATION. ENGINEER OF RECORD TO CONFIRM ACTUAL GROUNDWATER ELEVATION. CASTINGS SHALL MEET AASHTO M306 AND BE CAST WITH THE CONTECH LOGO.
6. FILTER CARTRIDGES SHALL BE MEDIA-FILLED, PASSIVE, SIPHON ACTUATED, RADIAL FLOW, AND SELF CLEANING. RADIAL MEDIA DEPTH SHALL BE 7-INCHES [178 MM]. FILTER MEDIA CONTACT TIME SHALL BE AT LEAST 38 SECONDS.
7. SPECIFIC FLOW RATE IS EQUAL TO THE FILTER TREATMENT CAPACITY (GPM) [L/S] DIVIDED BY THE FILTER CONTACT SURFACE AREA (SQ FT)[M2/].
8. STORMFILTER STRUCTURE SHALL BE PRECAST CONCRETE CONFORMING TO ASTM C-478 AND AASHTO LOAD FACTOR DESIGN METHOD.
9. FOR THE LOCATION OF INLET AND OUTLET PIPES, REFER TO SHEETS 18-27.

INSTALLATION NOTES:

1. ANY SUB-BASE, BACKFILL DEPTH, AND/OR ANTI-FLOTATION PROVISIONS ARE SITE-SPECIFIC DESIGN CONSIDERATIONS AND SHALL BE SPECIFIED BY ENGINEER OF RECORD.
2. CONTRACTOR TO PROVIDE EQUIPMENT WITH SUFFICIENT LIFTING AND REACH CAPACITY TO LIFT AND SET THE STORMFILTER STRUCTURE.
3. CONTRACTOR TO INSTALL JOINT SEALANT BETWEEN ALL STRUCTURE SECTIONS AND ASSEMBLE STRUCTURE.
4. CONTRACTOR TO PROVIDE, INSTALL, AND GROUT INLET PIPE(S).
5. CONTRACTOR TO PROVIDE AND INSTALL CONNECTOR TO THE OUTLET RISER STUB. STORMFILTER EQUIPPED WITH A DUAL DIAMETER HDPE OUTLET STUB AND SAND COLLAR. IF OUTLET PIPE IS LARGER THAN 8 INCHES [200 MM], CONTRACTOR TO REMOVE THE 8 INCH [200 MM] OUTLET STUB AT MOLDED-IN CUT LINE. COUPLING BY FERNCO OR EQUAL AND PROVIDED BY CONTRACTOR.
6. CONTRACTOR TO TAKE APPROPRIATE MEASURES TO PROTECT CARTRIDGES FROM CONSTRUCTION-RELATED EROSION RUNOFF.
